

AIR CONDITIONING SYSTEMS

CITY MULTI

DATA BOOK
R410A series

YKBM1M

2nd edition

DATABOOK describes the technical specifications of MITSUBISHI ELECTRIC Corp.'s CITYMULTI air conditioning system products.

DATABOOK YKB/YLM 2nd edition is updated from DATABOOK YKB/YLM. The contents below are added as well as some minor revisions.

Outdoor: PUHY-EP-Y(S)LM-A has been changed to PUHY-EP-Y(S)LM-A1.
PURY-EP-Y(S)LM-A has been changed to PURY-EP-Y(S)LM-A1.

Controller: EW-50E has been added to the lineup.
GB-50ADA-J has been deleted.

We recommend DATABOOK users to read carefully and take advantage of all the contents inside to design the CITY MULTI air conditioning system and/or to prepare documents for promotions.

Along with the DATABOOK, MITSUBISHI ELECTRIC provides a Design-Tool software to ensure the users to design the system correctly and simplify the calculations. Please contact your local distributor for this software.

Please be notified that specifications are subject to change without notice due to continual improvements of the product. For any inquiries, please contact your local distributor.

PEFY-P20,25,32VMR-E-L/R

Unit : mm

- Note 1. Use M10 screw for the suspension bolt (field supply).
 50mm or below of clearance between the indoor unit top and the end of the suspension bolt will make maintenance of the indoor heat exchanger easier.
2. Access door of 450mmx450mm at the ceiling under the drain pan should be designed for heat exchanger cleaning and maintenance.
3. This drawing shows the left piping specification. The symmetry shows the right piping specification.
 Model name: <Left piping> PEFY-P20 · 25 · 32VMR-E-L
 <Right piping> PEFY-P20 · 25 · 32VMR-E-R
4. Period cleaning of drain pan will prevent water overflowing.
 Gradient piping design is needed for water draining.
5. The inlet direction can be changed between rear inlet and bottom inlet.
 Keep the inlet space between the ceiling and the unit in case of bottom inlet.

- <Pipe size>
- Refrigerant pipe (gas) brazed ø12.7.....①
 - Refrigerant pipe (liquid) brazed ø6.35.....②
 - Drain pipe O.D. 26 (1")③

PEFY-P15,20,25,32,40,50,63VMS1-E

Unit : mm

- Note 1. Use M10 screw for the Suspension bolt (field supply).
- 2. Keep the service space for the maintenance at the bottom.
- 3. This chart indicates for PEFY-P40-50VMS1-E models, which has 3 fans. PEFY-P15-32VMS1-E models have 2 fans. PEFY-P63VMS1-E model have 4 fans.
- 4. In case of the inlet duct is used, remove the air filter (supply with the unit), then install the filter (field supply) at suction side.

PEFY-P20,25,32VMR-E-L/R

INSIDE SECTION OF CONTROL BOX

At factory shipment, the motor connector is connected for 220V/230V power. If 240V power is used, insert the attached Blue connector between the Motor connector and White connector from indoor board.
 Connector color: for power source
 White: 220V/230V
 Blue: 240V

SW-Y	Status	Display and operation at Local Remote Controller
OFF	Obey to local remote controller (Allowed)	Operation permitted
ON	Remote - OFF	"Central control" displayed. Local Remote Controller operation prohibited (not functioning)

Y: Aux. relay (Load $\geq 12VDC$ 1mA)

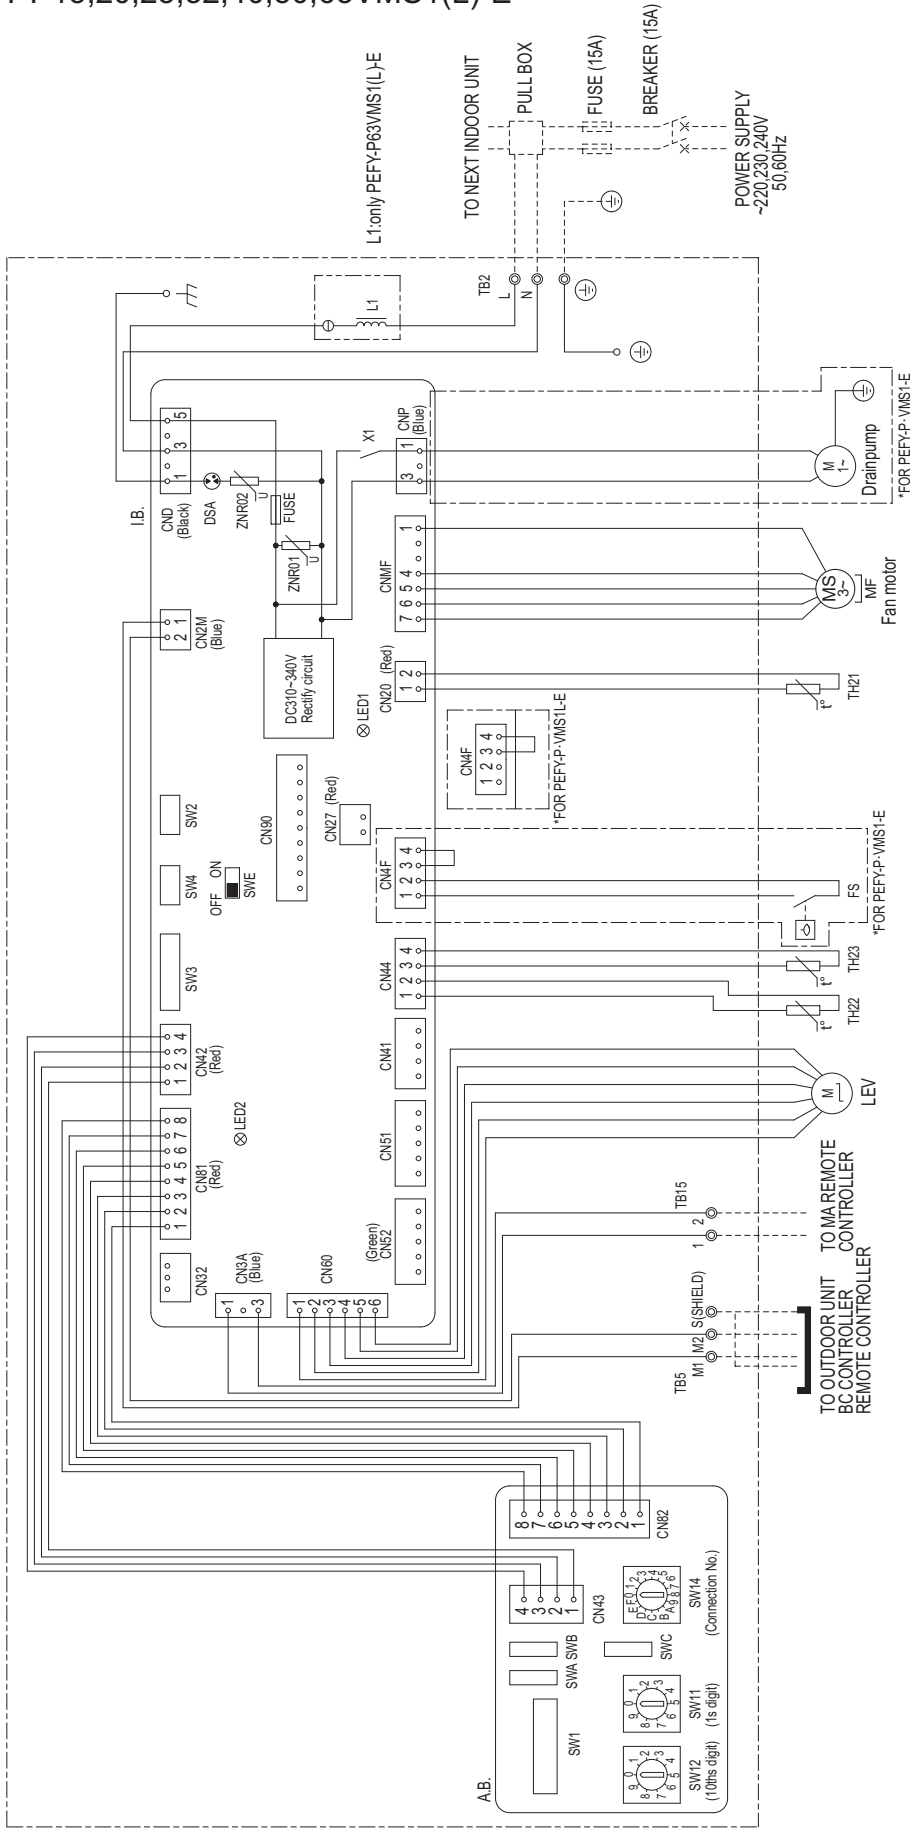

NOTE: 1. The wirings to TB2, TB5 shown in dotted line are field work.
 2. Mark ⊕ indicates terminal bed, ⊖ connector, ⊕ board insertion connector or fastening connector of control board.

INSIDE SECTION OF CONTROL BOX

NOTE:1 The part of thin dotted line indicates the circuit for optional parts.
 2. To perform a drainage test for the drain pump turn on the SWE on the control board while the indoor unit is being powered.
 *Be sure to turn off the SWE after completing a drainage test or test run.
 3. The wirings to TB2, TB5, TB15 shown in dotted line are field work.
 4. Mark Ⓞ indicates terminal block, ⊕ connector.

5-1. Sound levels

7-2. Long-life filter

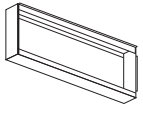

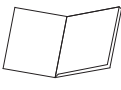

Life span: 2,500 hr (Dust concentration 0.15mg/m³)
 * The actual dust situation affects the filter life span, which should be considered at the applying site.
 Material: Synthetic fiber unwoven cloth filter
 Static pressure loss is referred to 6 "FAN CHARACTERISTICS CURVES".
 Long-life filter should be used together with filter box PAC-KE-TB-F.

PAC-KE-LAF

Item	PAC-KE86LAF	PAC-KE88LAF	PAC-KE89LAF	PAC-KE85LAF
Quantity	2	3	3	2
	(298X300)	(298X300)	(298X300)	(411X600)
Shape				

Detailed installation information should be referred to its Installation Manual.

PAC-KE-TB-F

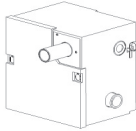

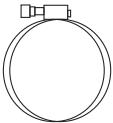

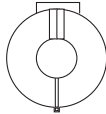

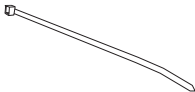

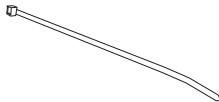

Item	① Screw	② Filter box	③ Installation manual	
Quantity	10/12*	1	1	
Shape				*PAC-KE250TB has 12 pieces of screw.

Detailed installation information should be referred to its Installation Manual.

7-3. Drain pump

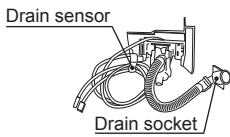

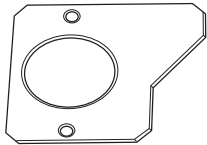

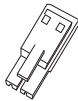

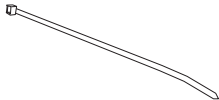

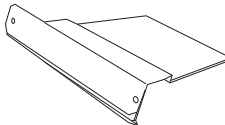

Drain pump is an optional part for VMS1L, and a standard for VMS1. When using drain pump, PAC-KE07DM-E (mounting type) is required.

PAC-KE07DM-E

Item	① Drain pump	② Attachment	③ Drain hose 1	④ Pipe cover 1	⑤ Pipe cover 2
Quantity	1	1	1	1	1
Shape			(385mm) 	(255mm) 	(200mm) 
Item	⑥ Hose band	⑦ Screw	⑧ Clamp	⑨ Ferrite clamp	⑩ Band 1
Quantity	1	3	3	1	2
Shape					(100mm) 
Item	⑪ Drain hose 2	⑫ Pipe cover 3	⑬ Band 2		
Quantity	1	1	6		
Shape	(175mm) 		(380mm) 		

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed. Drain pump PAC-KE04DM-F can pump water up to 550mm [21-11/16 in.] high from the drain pan.

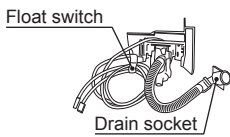

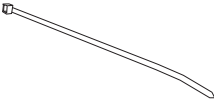

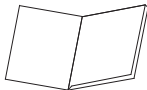

PAC-KE04DM-F

Item	① Drain pump ass'y	② Separator	③ Rubber plug	④ Connector	⑤ Dummy connector
Quantity	1	1	2	1	1
Shape					
Item	⑥ Rubber bushing	⑦ Band	⑧ PTT screw 4X10	⑨ Fixing plate	⑩ Installation manual
Quantity	1	2	6+1 (spare)	1	1
Shape					

Detailed installation information should be referred to its Installation Manual.

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed. Drain pump PAC-KE05DM-F can pump water up to 700mm [27-9/16 in.] high from the drain pan.

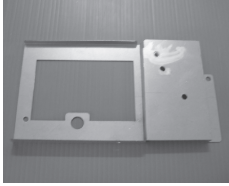

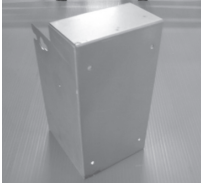

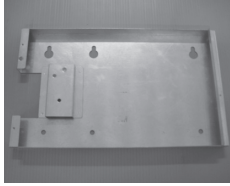

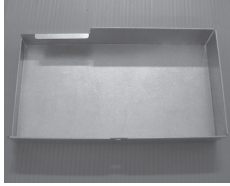

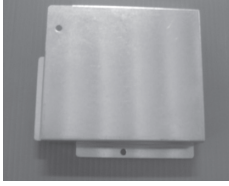

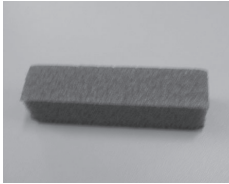

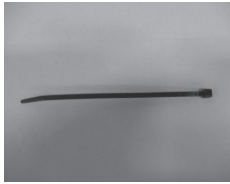

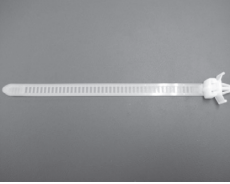

PAC-KE05DM-F

Item	① Drain pump ass'y	② Rubber plug	③ Rubber bushing	④ Band	⑤ PTT screw 4X10
Quantity	1	2	1	2	6+1 (spare)
Shape					
Item	⑥ Installation manual				
Quantity	1

PEFY-P20VMA3-E

Unit : mm

[Maintenance access space]
Secure enough access space to allow for the maintenance, inspection, and replacement of the motor, fan, drain pump, heat exchanger, and electric box in one of the following ways.
Select an installation site for the indoor unit so that its maintenance access space will not be obstructed by beams or other objects.

- (1) When a space of 300mm or more is available below the unit between the unit and the ceiling. (Fig.1)
 - Create access door 1 and 2 (450x450mm each) as shown in Fig.2.
 - (Access door 2 is not required if enough space is available below the unit for a maintenance worker to work in.)
- (2) When a space of less than 300mm is available below the unit between the unit and the ceiling.
 - (At least 20mm of space should be left below the unit as shown in Fig.3.)
 - Create access door 1 diagonally below the electric box and access door 3 below the unit as shown in Fig.4.
 - or
 - Create access door 4 below the electric box and the unit as shown in Fig.5.

PEFY-P20,25,32VMAL-E	800	44	150	300			10
PEFY-P40VMAL-E					4	780	10
PEFY-P50VMAL-E	1000	54	260				
PEFY-P63,71,80VMAL-E	1200	49	330		4	990	10
PEFY-P100,125VMAL-E	1500	54	320		5	1280	12
PEFY-P140VMAL-E	1700	54	370		5	1480	12

Required space for service and maintenance

Make the access door at the appointed position properly for service maintenance.

PEFY-P20, 25, 32, 40, 50, 63, 71, 80, 100, 125, 140VMAL-E with filter box

Unit : mm

- Note 1. Use M10 screw for the Suspension bolt (field supply).
- 2. Keep the service space for the maintenance at the bottom.
- 3. This chart indicates for PEFY-P63, 71, 80, 100, 125, 140VMAL-E models, which have 2 fans. PEFY-P20, 25, 32, 40, 50VMAL-E models have 1 fan.
- 4. Use air filter installed with indoor unit.

	Installation	a. When the PEFY-P-VMH-E-F is connected with the outdoor unit, the maximum connectable total indoor unit capacity is as follows. Heat pump model _____ Cooling only model _____ 110% (100% in case of heating below -5°C(23°F)) 110% b. Only the thermo-sensor in the remote controller or an extra remote thermo-sensor can be chosen as the room temperature sensor. c. No Auto mode or Dry mode is available. d. The fan temporarily stops in defrosting. e. The air flow rate should be kept lower than 110% of value above. Please see "FAN Curve" for details. f. As PEFY-P-VMH-E-F cools the outdoor air directly, dewing at the air outlet grilles is possible, and should be considered. g. Air filter must be installed in the air intake side, and should be easy to maintain.					
Note : *1 Nominal cooling condition *2 Nominal cooling condition *3 Nominal heating condition Unit converter							
Indoor : 33°CDB/28°CWB (91°FDB/82°FWB)		-	0°CDB/-2.9°CDB (32°FDB/27°FDB)		kcal/h = kW x 860		
Outdoor : 33°CDB (91°FDB)		-	0°CDB/-2.9°CDB (32°FDB/27°FDB)		BTU/h = kW x 3,412		
Pipe length : 7.5 m (24-9/16 ft)		-	7.5 m (24-9/16 ft)		cfm = m ³ /min x 35.31		
Level difference : 0 m (0 ft)		-	0 m (0 ft)		lbs = kg / 0.4536		
* Due to continuing improvement, above specification may be subject to change without notice. *5 The factory setting of external static pressure is shown without < > .							
*4 The values are measured at the factory setting of external static pressure. Refer to "Fan characteristics curves", according to the external static pressure, in DATA BOOK for the usable range of air flow rate. *Above specification data is subject to rounding variation.							

PEFY-P80,140VMH-E-F

Unit : mm

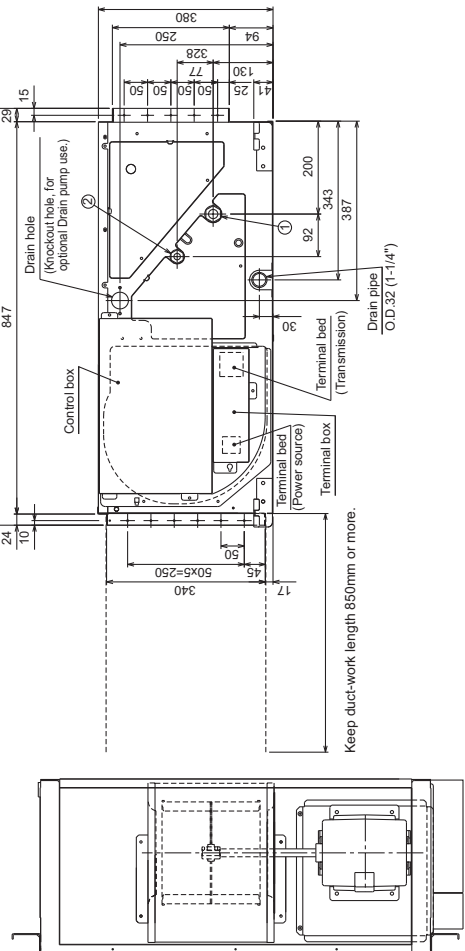

- Note 1 Use M10 screw for the lifting bolt (field supply).
 2. Keep the service space for maintenance from the bottom when the heat exchanger is cleaned.
 3. This chart indicates for PEFY-P140VMH-E-F models, which have 2 fans.
 PEFY-P80VMH-E-F model has 1 fan.
 4. Make sure to install the air filter (field supply) on the air intake side.
 In case field supplied air filter is used, attach it where the filter service is easily done.

8-2. Long-life filter

Life span: 2,500 hr (Dust concentration 0.15mg/m³)

*The actual dust situation affects the filter life span, which should be considered at the applying site.

Material: Synthetic fiber unwoven cloth filter

Static pressure loss is referred to 6 "FAN CHARACTERISTICS CURVES".

Long-life filter should be used together with filter box PAC-KE-TB-F.

PAC-KE-LAF

Detailed installation information should be referred to its Installation Manual.

PAC-KE-TB-F

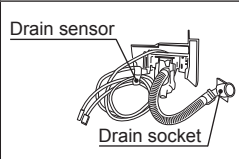

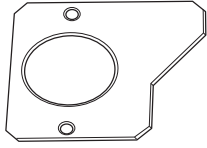

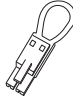

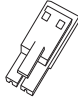

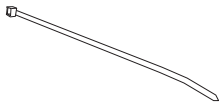

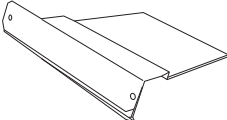

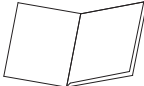

Item	① Screw	② Filter box	③ Installation manual	
Quantity	10/12*	1	1	
Shape				*PAC-KE250TB has 12 pieces of screw.

Detailed installation information should be referred to its Installation Manual.

8-3. Drain pump

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed.
 Drain pump PAC-KE04DM-F can pump water up to 550mm [21-11/16 in.] high from the drain pan.

PAC-KE04DM-F

NOTES:

- At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- In case of using MA-Remote controller, please connect to TB15. (Remote controller wire is non-polar.)
- In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
- Symbol [S] of TB5 is the shield wire connection.
- Symbols used in wiring diagram above are, : terminal block, : connector.
- The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the table above.
- Please set the switch SW5 according to the power supply voltage. Set SW5 to 240V side when the power supply is 230 and 240 volts. When the power supply is 220 volts, set SW5 to 220V side.

LED on indoor board for service

6. OA INTAKE-STATIC PRESSURE CURVES

YKB/YLM 2nd

Please confirm that inlet-air temperature (which is mixed with outdoor air) is in the following operating temperature range.

PLFY-P-VLMD-E: Operating temperature range

Mode	Temperature range of inlet air
Cooling	15°C~24°C(Wet bulb)
Dry	
Heating	15°C~27°C(Dry bulb)

*Relative humidity range is 30~80%.

PLFY

7. BRANCH DUCT INTAKE-STATIC PRESSURE CURVES

PLFY

8-1. Temperature distributions

PLFY-P20-125VLM-D-E

<Cooling mode>

Airflow angle : Horizontal
 Room temp.: 27°C
 Airflow rate : High

<Heating mode>

Airflow angle : Downward
 Room temp.: 20°C
 Airflow rate : High

Note : These figures show typical temperature distributions in the conditions above. In the actual installation, they may differ from these figures under the influence of air temperature conditions, ceiling height, cooling/heating load, obstacles, etc.

8-2. Airflow distributions

PLFY-P20-125VLM-D-E

<Cooling mode>

Airflow angle : Horizontal
 Room temp.: 27°C
 Airflow rate : High

<Heating mode>

Airflow angle : Downward
 Room temp.: 20°C
 Airflow rate : High

Note : These figures show typical airflow distributions in the conditions above. In the actual installation, they may differ from these figures under the influence of air temperature conditions, ceiling height, cooling/heating load, obstacles, etc.

PLFY

9-1. Optional parts line up for the Indoor unit

	OA duct flange
PLFY-P-VLMD-E	PAC-KH110F

PLFY-P-VLMD-E

9-2. OA duct flange

OA duct flange PAC-KH110F makes outside fresh air ducting to the Indoor unit easier.
 Material: Galvanized steel plate, with insulation sheet adhered.

Item	① External air intake ducting	② Ducting flange	③ PTT screws (4x10)
Quantity	1	1	10 (two spares)
Shape			

Detailed installation information should be referred to its Installation Manual.

Unit : mm

PLFY-VCM/VBM

PLFY-P20, 25, 32, 40, 50, 63, 80, 100, 125VBM-E

Unit: mm

Detail connecting of Branch duct (Both aspects)

Detail drawing of fresh air intake hole

Drain pipe PVC pipe: O.D. 32 (1-1/4") (Connected the attached flexible pipe or socket. I.D. 32 (1-1/4"))
 Keep approximately 10 to 15 mm space between unit ceiling and ceiling slab.

In case of standard grille : PLP-6BA

In case of Auto-Grille : PLP-6BAJ

In case of wireless remote controller : PLP-6BALM

Emergency operation switch <Cooling> and Emergency Up/Down switch <Up>
 Emergency operation switch <Heating> and Emergency Up/Down switch <Down>

Auto-Grille Air intake grille Up/down distance

- Note 1. Please choose the Grille from a standard grille, Auto-Grille.
 2. As for drain pipe, please use VP-25 (O.D. ø32 PVC TUBE). Drain pump inclusion. Raise is max 850mm from the ceiling.
 3. As for suspension bolt, please use M10 or W3/8. (Procured at local site)
 4. Electrical box may be removed for the service purpose. Make sure to slack the electrical wire little bit for control/power wires connection.
 5. The height of the indoor unit is able to be adjusted with the grille attached.
 6. For the installation of the optional high efficiency filter or optional multi-functional casement.
 1) Requires E or more space between transom and ceiling for the installation.
 2) Add 135 mm to the dimensions * marked on the figure.
 3) The optional high efficiency filter becomes optional multi-functional casement and concomitant use.
 7. When installing the branch ducts, be sure to insulate adequately. Otherwise condensation and dripping may occur. (It becomes the cause of dew drops/Wear dew.)
 8. As for necessary installation/service space, please refer to the left at figure.

Accessory ... Drain socket (I.D. 32 (1-1/4"))

7-1. Optional parts line up for the Indoor unit

	Description	Model
PLFY-P-VBM-E	Air outlet shutter plate	PAC-SH51SP-E
	Multi-function casement	PAC-SH53TM-E
	High efficiency filter element	PAC-SH59KF-E
	i-see Sensor corner panel	PAC-SA1ME-E
	Automatic filter elevation panel	PLP-6BAJ
	Wireless signal receiver	PAR-SA9FA-E
	Space panel	PAC-SH48AS-E
	Duct flange for fresh air intake	PAC-SH65OF-E

PLFY-P-VBM-E

7-2. Air outlet shutter plate

Using the air outlet shutter plate to block the air outlet to modify the air-way from 4 to 3 or 2.
 With 1 PAC-SH51SP-E, 4 air-ways can be changed to 3;
 With 2 PAC-SH51SP-E, 4 air-ways can be changed to 2;
 Changing to 1 way is not allowed.
 Material: Foamed polyethylene + foamed urethane, color: Black

Item	① Shutter plate	② Insulator	
Quantity	2	1	
Shape			

Detailed installation information should be referred to its Installation Manual.

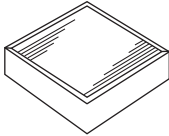

7-3. High efficiency filter element

Life span: 2,500 hr (Dust concentration 0.15mg/m³); Colorimetric method 65% (JIS 11 class); No re-production.

* The actual dust situation affects the filter life span, which should be considered at the applying site.

Material: Electrostatic polyolefin fiber

High efficiency filter element PAC-SH59KF-E should be used together with the Multi-function casement PAC-SH53TM-E. When using PAC-SH59KF-E, switching on SWC of the Indoor unit address board is needed. Details should be referred to its Installation Manual.

Quantity	1	
Shape		

Detailed installation information is referred in its Installation Manual.

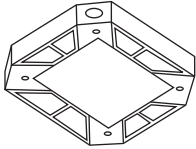

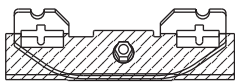

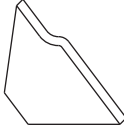

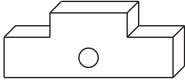

7-4. Multi-function casement

Multi-function casement is used for High efficiency filter element and/or fresh air intake from outdoor.

It should be used with High efficiency filter element PAC-SH59KF-E (Colorimetric method 65%).

Fresh air intake on the Multi-function casement is possible from any 2 or less corners among the 4 ones.

But duct and flange on the casement should be prepare locally.

Item	① Multi-functional casement	② Screw with washer (black)	③ Screw
Quantity	1	4	8
Shape		M5X0.8X25 	M5X0.8X12 
Item	④ Decorative panel securing bracket	⑤ Insulator A for Decorative panel	⑥ Insulator B for Decorative panel
Quantity	4	1	1
Shape	With insulator 		

Detailed installation information should be referred to its Installation Manual.

PLFY-YCM/VBM

7-5. i-see sensor corner panel

i-see sensor provides comfortable space as it detects the floor temperature to prevent spotty temperature. And that enables the unit to save energy.
 Attention
 Make sure that there are no gaps between the unit and the grille, and the grille and ceiling.
 ※ It may cause dew dripping.

Item	① i-see sensor corner panel	② Plastic fastener	
Quantity	1	2	
Shape			

Detailed installation information should be referred to its Installation Manual.

7-6. Automatic filter elevation panel

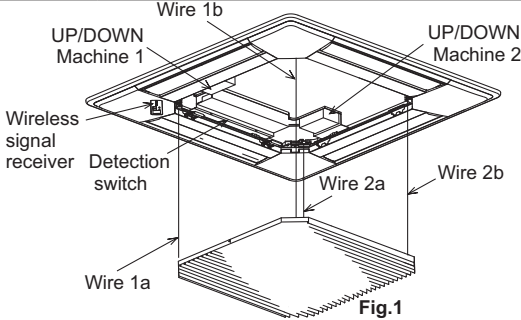

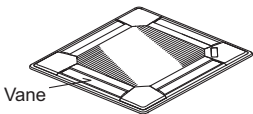

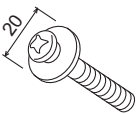

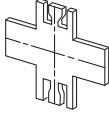

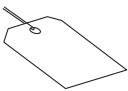

Fig.1

- Air intake grille can be lifted and lowered automatically by wired remote controller (MA type) or wireless remote controller (Item 9).
- Lowering the air intake grille allows you to clean the filter easily.
- You can set up eight different stages of lowering distance for the air intake grille according to the set up location if desired. (Maximum : 4m)

Item	① Decorative panel	② Screw with washer	③ Installation gauge	④ Plastic fastener
Quantity	1	4	1	3
Shape		 M5X0.8X25	 (Used split into four pieces)	
Item	⑤ Tag	⑥ Screw	⑦ Screw	⑧ Screw
Quantity	1	4	1	3
Shape		 4X8 Only three are used	 4X12	 M5X10
Item	⑨ Wireless remote controller			
Quantity	1			
Shape				

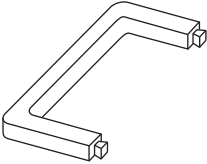

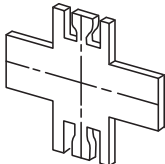

Detailed installation information should be referred to its Installation Manual.

7-7. Wireless signal receiver

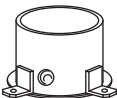

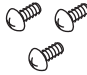

Wireless signal receiver PAR-SA9FA-E is necessary for using wireless remote controller PAR-SA9FA-E is a corner panel with the signal receiver for wireless remote controller.		
Item	① Wireless signal receiver	
Quantity	1	
Shape		

Detailed installation information should be referred to its Installation Manual.

7-8. Space panel

Decorative cover for the installation when the ceiling height is low.		
Item	① Space panel	② Gauge for installation
Quantity	2	1
Shape		

7-9. Duct flange for fresh air intake

Part to attach a duct to take in fresh air from outdoors.			
Item	① Duct flange	② Insulator	③ Screws (M4 x 10)
Quantity	1	1	3
Shape

PCFY-P40VKM-E

Unit : mm

NOTES.
 1. Use M10 or W3/8 screw for anchor bolt.
 2. Please be sure when installing the drain lift up mechanism (option parts), refrigerant pipe will be only upward.

- ① Drainage pipe connection (26mm I.D.)
 - ② Drainage pipe connection (for the left arrangement)
 - ③ Knock out hole for left drain-piping arrangement
 - ④ Refrigerant-pipe connection (gas pipe side/flared connection)
 - ⑤ Refrigerant-pipe connection (liquid pipe side/flared connection)
 - ⑥ Knock out hole for upper drain pipe arrangement
 - ⑦ Knock out hole for fresh air intake Ø100
 - ⑧ Knock out hole for wiring arrangement 2-Ø22
 - ⑨ Knock out hole for wiring arrangement 2-Ø26
- Accessory... Drain socket (I.D. 26)

PCFY

PCFY-P100,125VKM-E

Unit : mm

- ⑥ Knock out hole for upper drain pipe arrangement
- ⑦ Knock out hole for fresh air intake Ø100
- ⑧ Knock out hole for wiring arrangement 2-Ø22
- ⑨ Knock out hole for wiring arrangement 2-Ø26
- Accessory : Drain socket (I.D. 26)

- ① Drainage pipe connection (26mm I.D.)
- ② Drainage pipe connection (for the left arrangement)
- ③ Knock out hole for left drain-piping arrangement
- ④ Refrigerant-pipe connection (gas pipe side/flared connection)
- ⑤ Refrigerant-pipe connection (liquid pipe side/flared connection)

In case of the rear pipe arrangement, make sure that remove the shaded portions from the independent piece. Then put the independent piece back in initial position. (The heat exchanger might be clogged because of dust)

Use the current nuts meeting the pipe size of the outdoor unit.

- NOTES.
- 1. Use M10 or W3/8 screw for anchor bolt.
 - 2. Please be sure when installing the drain lift up mechanism (option parts), refrigerant pipe will be only upward.

Material: PP honeycomb Gravimetric method: 70%			
Item	PAC-SH88KF-E	PAC-SH89KF-E	PAC-SH90KF-E
Quantity	2 (Small)	1 (Small), 2 (Large)	2 (Large)
Shape			

8-3. Drain pump

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed. Drain pump PAC-SH-DM-E can pump water up to 600 mm high from the ceiling.

Item	① Drain lift up mechanism	② Attachment	③ Screws (4×10)	④ VP-20 pipe	⑤ Pipe cover
Quantity	1	1	6	1	1
Shape		 1 Drain lift up mechanism fixture	 For the installation of drain lift up mechanism 1		 For insulation of VP20 pipe4
Item	⑥ Flexible hose	⑦ Fastener	⑧ L-shaped pipe (gas pipe)	⑨ L-shaped pipe (liquid pipe)	⑩ Insulator A
Quantity	1	1	1	1	2
Shape					6t×220×80 (For internal insulation)  For the insulation of L-shaped pipes ⑧ and ⑨ and the refrigerant pipes.
Item	⑪ Insulator B				
Quantity	2				
Shape	3t×250×120 (For external insulation)  For the insulation of L-shaped pipes ⑧ and ⑨ and the refrigerant pipes.				

Detailed installation information should be referred to its Installation Manual.

8-4. Wireless remote controller kit

Wireless remote controller receiver is built-in type.

Item	① Wireless remote controller receiver	② Wireless remote controller	③ Remote control holder	④ "AAA" LR3 alkaline batterie	⑤ 4.1 x 16 wood screw
Quantity	1	1	1	2	2
Item	⑥ Cord retaining clips	⑦ Connection cord fixing seal (12x30 size)			
Quantity	2	1			

Detailed installation information should be referred to its Installation Manual.

Note

- At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- In case of using MA-remote controller, please connect MA remote controller cable in an accessory to the connector (Remote controller wire is non-polar.)
- In case of using M-NET, please connect to TB5 (Transmission line is non-polar.)
- Symbols used in wiring diagram above are, : terminal block, : connector
- The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the fig : *1.
- Please set the switch SW5 according to the power supply voltage.
Set SW5 to 240V side when the power supply is 230 and 240 volts.
When the power supply is 220 volts, set SW5 to 220V side.

7-2. External LEV Box

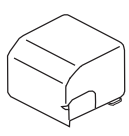

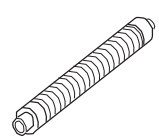

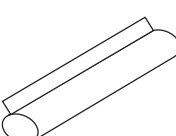

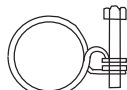

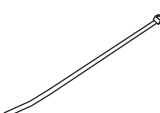

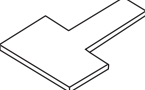

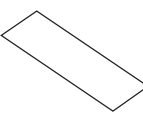

Item	① External LEV Box	② Joint pipe	③ Pipe cover	④ Band	⑤ Fastener
Quantity	1	2	2	2	2
Shape					

Detailed installation information should be referred to its Installation Manual.

7-3. Drain pump

PAC-SH75DM-E

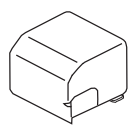

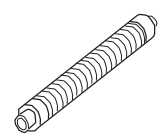

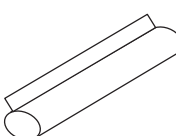

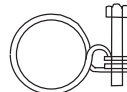

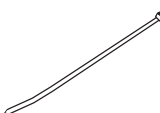

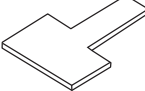

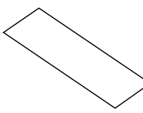

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed. Drain pump PAC-SH75DM-E can pump water up to 800mm high from the drain pan.

Item	① Drain pump	② Screw	③ Drain hose	④ Drain hose cover	⑤ Hose band
Quantity	1	(M4×16)×1, (M4×35)×6	1	1	1
Shape					
Item	⑥ Band	⑦ Installation plate	⑧ Wiring diagram		
Quantity	1	1	1		
Shape					

Detailed installation information should be referred to its Installation Manual.

PAC-SH94DM-E

If drain water can not flow out the Indoor unit by gravity and gradient, a Drain-pump for draining is needed. Drain pump PAC-SH94DM-E can pump water up to 800mm high from the drain pan.

Item	① Drain pump	② Screw	③ Drain hose	④ Drain hose cover	⑤ Hose band
Quantity	1	(M4×16)×1, (M4×35)×6	1	1	1
Shape					
Item	⑥ Band	⑦ Installation plate	⑧ Wiring diagram		
Quantity	1	1	1		
Shape					

Detailed installation information should be referred to its Installation Manual.

NOTES:

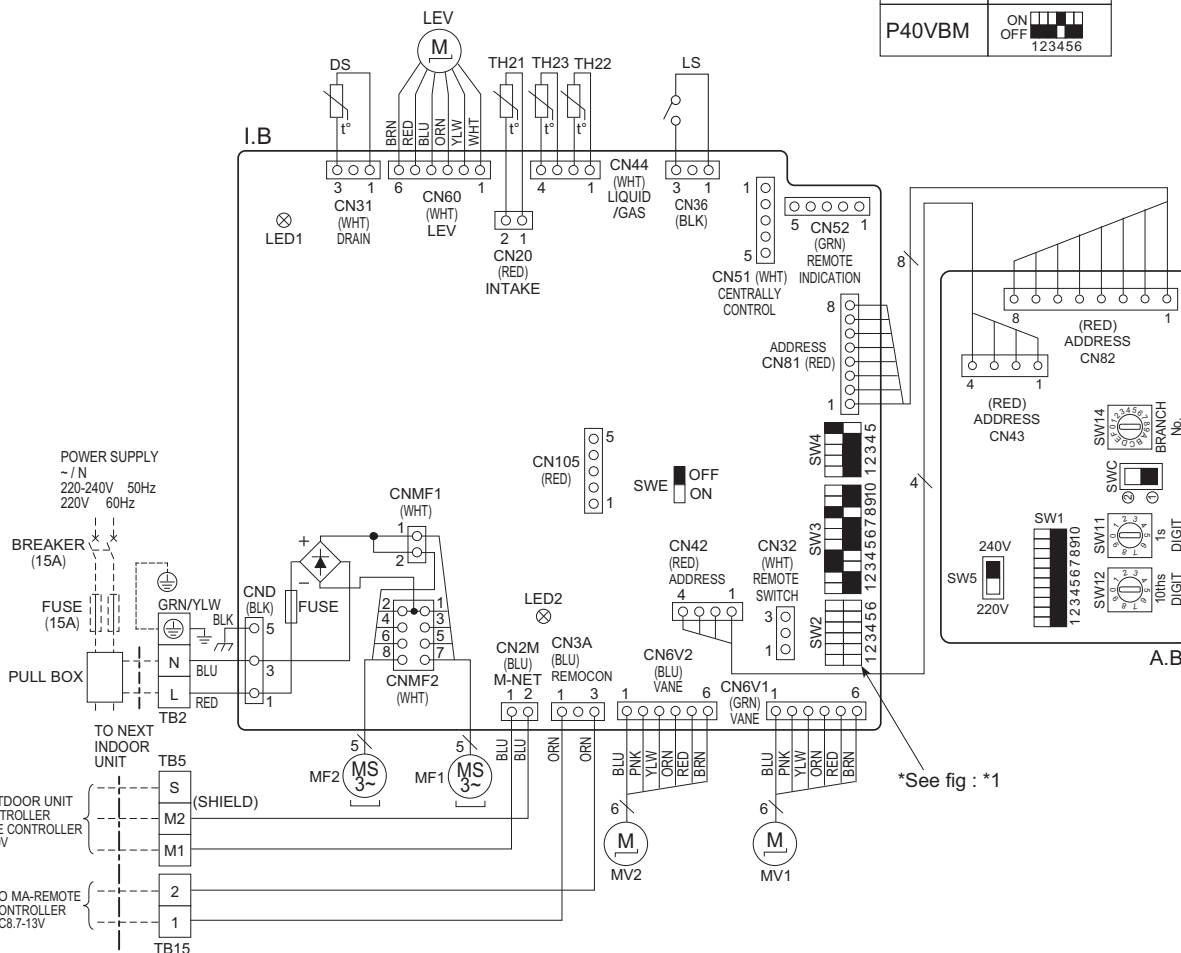

- At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- In case of using MA-Remote controller, please connect to TB15.
(Remote controller wire is non-polar.)
- In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
- Symbol [S] of TB5 is the shield wire connection.
- Symbols used in wiring diagram below are, : terminal block, : connector.
- The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the table below.
- Please set the switch SW5 according to the power supply voltage.
Set SW5 to 240V side when the power supply is 230 and 240 volts.
When the power supply is 220 volts, set SW5 to 220V side.

The black square (■) indicates a switch position. <*1>

LOSSNAY

LOSSNAY is a perfect combination of heat recovery and ventilation, which is a leading edge product in the ventilation and air-conditioning field.

The LOSSNAY core is a special preserved paper made cross-flow and plate-fin structure, which is referable below.

CITY MULTI can combine LOSSNAY into the air conditioning system, performing the best solution to ventilation and air-conditioning.

Line up of LOSSNAY units

- LGH-15RVX-E [150m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-25RVX-E [250m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-35RVX-E [350m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-50RVX-E [500m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-65RVX-E [650m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-80RVX-E [800m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-100RVX-E [1000m³/h Single phase 220-240V 50Hz/220V 60Hz]
- LGH-150RVX-E [1500m³/h Single phase 220-240V 50Hz/220V 60Hz]

*The Air outlets noise (45° angle, 1.5meters in front of the unit) is about 21dB greater than the indicated value.(at Fan speed 4)

*The running current, the input power, the efficiency and the noise are based on the rating air volume, and 230V/50Hz.

*For the specification at the other frequency contact your dealer.

*Use this unit between static pressure 50Pa and 220Pa at Fan speed4. Otherwise the motor protection may work and reduce its output or the noise level might be larger.

Standard installation examples

•Duct length

Model	Distance
LGH-15 to 65RVX-E	1 m or more
LGH-80 and 100RVX-E	2.5 m or more
LGH-150 and 200RVX-E	3 m or more

•The parts can also be installed upside down. Remove the maintenance cover, rotate the parts by 180°, and re-install.

•In a region where there is risk of freezing in winter, it is recommended to install an Electrically operated damper, or the like, in order to prevent the intrusion of (cold) outdoor air while Lossnay is stopped.

CAUTION

•Do not install Lossnay unit vertically or on an incline.

Attention for specifications

1. Cold operation mode(*1) is to start repeating in the case that Lossnay's detected OA temperature is less than -10°C.
 - *1. Supply air(SA) in the operation for 60min. followed by stop operation for 10min.
2. The current, power consumption and efficiency are based on the air flow rate in the specification.
3. Fan speed is selectable by the remote controller from fan speed 1, 2, 3 and 4.
 - Multi Ventilation Mode should set on Lossnay unit or remote controller (PZ-61DR-E).
4. Lossnay ventilation mode is to start automatically in the case that Lossnay's detected OA temperature is less than +8°C, even if Bypass ventilation is set by remote controller.
 - Remote controller continue to show "Bypass ventilation" in this case.
5. Temperature Exchange efficiency(%) are based on winter condition.
6. Mitsubishi Electric measures the machine according to the Japan Industrial Standards(JIS B 8628)

Attention

1. When using the product where it is exposed to high temperatures and humidity (40°C or higher, RH 80% or higher), or where fog occurs frequently, moisture is likely to condense in the core, and may result in condensation build up in the unit. The product should not be used under such conditions.
2. Outdoor air may enter the Lossnay owing to the pressure difference between indoor and outdoor or external winds even when the product is not operated. It is recommended to install an Electrically operated damper to block the outdoor air.
3. In a cold weather area, an area with strong external winds or where fog occurs frequently, cold outdoor air, external winds or fog may be introduced into the product when its operation is stopped.
 - It is recommended to install an Electrically operated damper.
4. In a cold weather area, or others, dewing or freezing could occur on the main unit, where the duct is connected, or other sections, depending on the conditions of outdoor air and indoor temperature and moisture, even if they are within the range of operating conditions. Make sure to confirm the operating conditions and other precautions, and do not use the product if dewing or freezing is anticipated.
5. The outside ducts must be tilted at a gradient (1/30 or more) down toward the outdoor louvres from Lossnay, and properly insulated. (The entry of rain water may cause power leakage, fire, or damage to household property)
6. The two outdoor ducts must be covered with heat-insulating material in order to prevent condensation from forming.
 - If it is expected that the ambient temperature around the place where the Lossnay unit is installed will be high during the summer air conditioning season, it is recommended that the indoor ductwork be covered with insulation material.
7. Inspection opening (450 × 450 or more) must be installed on the filter and Lossnay core removing side.

Lossnay model selection advices

1. Operating environment
Install this product in an environment where the temperature ranges from -10°C to +40°C and the relative humidity is less than 80%RH. If condensation is expected to form, heat up the fresh outside air should be treated.
2. Do not use under high temperature and humidity condition
Condensation will occur and water will gather inside the Lossnay cores under high temperature and humidity condition, such as warm swimming pool, bathroom, greenhouse or foggy place.
3. Condition of outdoor, indoor and return air
Avoid using Lossnay under air condition with acid, alkalis, organic solvent, oil mist, paint, or harmful gas as pesticide, corrosive gas, etc.
4. Insulation failure caused by salt or sulphur air and hot spring steam, rust, fire or malfunction may occur.
Installing high quality filters inside outdoor air duct if the Lossnay operates in salt or sulphur air conditions.
5. Intake of mist or outdoor air during off-mode operation
Outdoor air or mist may flow through the duct into your room when Lossnay is in off-mode at windy and foggy area.
To prevent intake of outdoor air or fog, a damper is advised to be installed.
6. Entry of insects
When using the product in an environment where there is a window, or opening near the outdoor hood, so that insects are likely to gather around the interior or exterior light, take note that small insects may intrude into the Lossnay filters.
7. Bypass ventilation
In the case of "Bypass" ventilation, the supply air temperature slightly rises more than the outside air temperature because of the effect around the ducts or the unit motors.
8. Usage of M-NET.
When solely using Lossnay units, power supply unit is required to connect to centralized control.
Number of power supply units or the transmission boosters should correspond with the connected Lossnay units.

Caution for installation

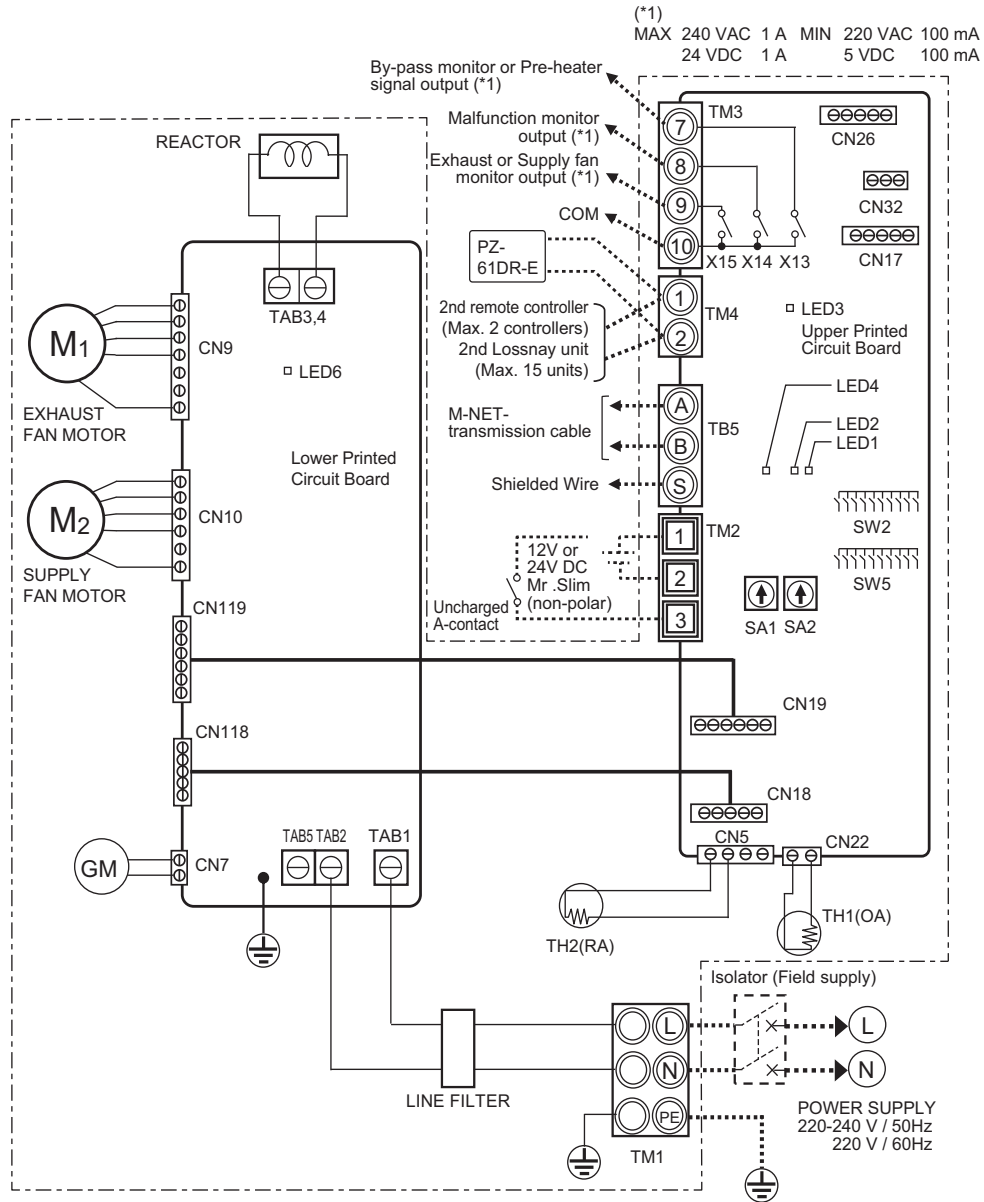

1. Do not modify the unit as it may cause malfunction.
2. Do not install Lossnay unit vertically or on an incline. It may cause malfunction or deterioration of performance.
3. Leaving sufficient space for maintenance purpose.
4. The location of the air inlet
Take care in locating air inlet to prevent intake of dirty air or disgusting smell from exhaust gas of factory, air from rubbish disposal, etc.
5. Take precautions when using the product in a quiet location.
6. Heat insulation foam for duct
Take care as below to prevent the contaminate ceiling by duct condensation.
 - 1) The two outdoor ducts (OA and EA) must be covered with heat-insulating material in order to prevent condensation.
 - 2) If it is expected that the ambient temperature around the place where the Lossnay unit is installed will be high during the summer air conditioning season, it is recommended that the indoor ductwork should be covered with insulation material.
 - 3) Outdoor air may come into unit during not operating unit by the pressure difference between indoor and outdoor or the outdoor wind. In this case you should install a damper.
 - 4) It is possible for condensation and freezing to occur in the cold regions inside the unit because of the outdoor air condition or humidity condition above ceiling. Make sure to install supplemental insulation foam.
 - 5) In the case that air condition around Lossnay unit is high temperature in summer, it is recommended that there are heat insulation foam on indoor side duct to prevent heat recovery decreased by warming indoor duct. In winter, it is possible to cool indoor side duct without heat insulation foam on indoor side duct.
7. Prevent entry of rainwater into Lossnay unit
Install weather louver or "Weather cover" for OA inlet & EA outlet. This is to prevent rainwater entering the Lossnay unit. Ducts to outdoor (OA and EA) should decline by 1/30 or more.
8. Install the anchor bolts to ensure the product's weight or earthquake load. Correctly rated wire/chain may also be used.
9. Do not install this product in a place where it is exposed to ultraviolet light. UV may be damage covering insulation.
10. Electrical Work
A single pole isolator must be installed at the origins of mains power supply.
Use single flush box, to support remote controller.
Must connect ground wiring.
When connecting external devices (electrically operated damper, lamp, monitoring unit, etc.) using output signals of the Lossnay unit, make sure to install safety equipment for the external devices. (It could cause fire, damage, etc. without safety equipment)
11. Duct heater
In case of installing a duct heater interlock with Lossnay, be sure to observe followings.
 - 1) Select a duct heater in compliance with local and national laws, ordinances, and standards.
Select a duct heater that has obtained the CE mark.
 - 2) Always select a heater that is equipped with a non-self-resetting safety device. Do not directly supply power from the Lossnay unit to the duct heater. Doing so could cause fire.
 - 3) Install a circuit breaker for the duct heater in compliance with all applicable laws, ordinances, and standards.
 - 4) Install the duct heater separated from the product by a distance of 2 m or more.
Failure to do so may result in equipment damage due to the transmission of residual heat from the heater.
 - 5) When using a heater without a temperature control function, select a heater with a capacity that is matched to the air volume.
 - 6) Do not use the heater outside the set air volume.
If the heater's capacity is too larger, this may result in the heater frequently turning ON/OFF.
If the heater's capacity is too small, this may result an inability to heat.
 - 7) Ensure that the duct heater and Lossnay are wired and that the Lossnay function settings have been configured, and then always check operation by trial operation.

Maintenance and lifetime

Refer to each model's operation instructions for the suggested maintenance period and methods. General indication of lifetime of the main parts is as below. Time below is unrelated to guaranteed period for service. And parts exchange period varies with usage condition.

Lossnay cores	: Around 10 years with maintenance as stated periods
Air Filters	: Around 5 years with maintenance as stated periods
High efficiency filters	: 3000 hours
Motor	: 30000 hours

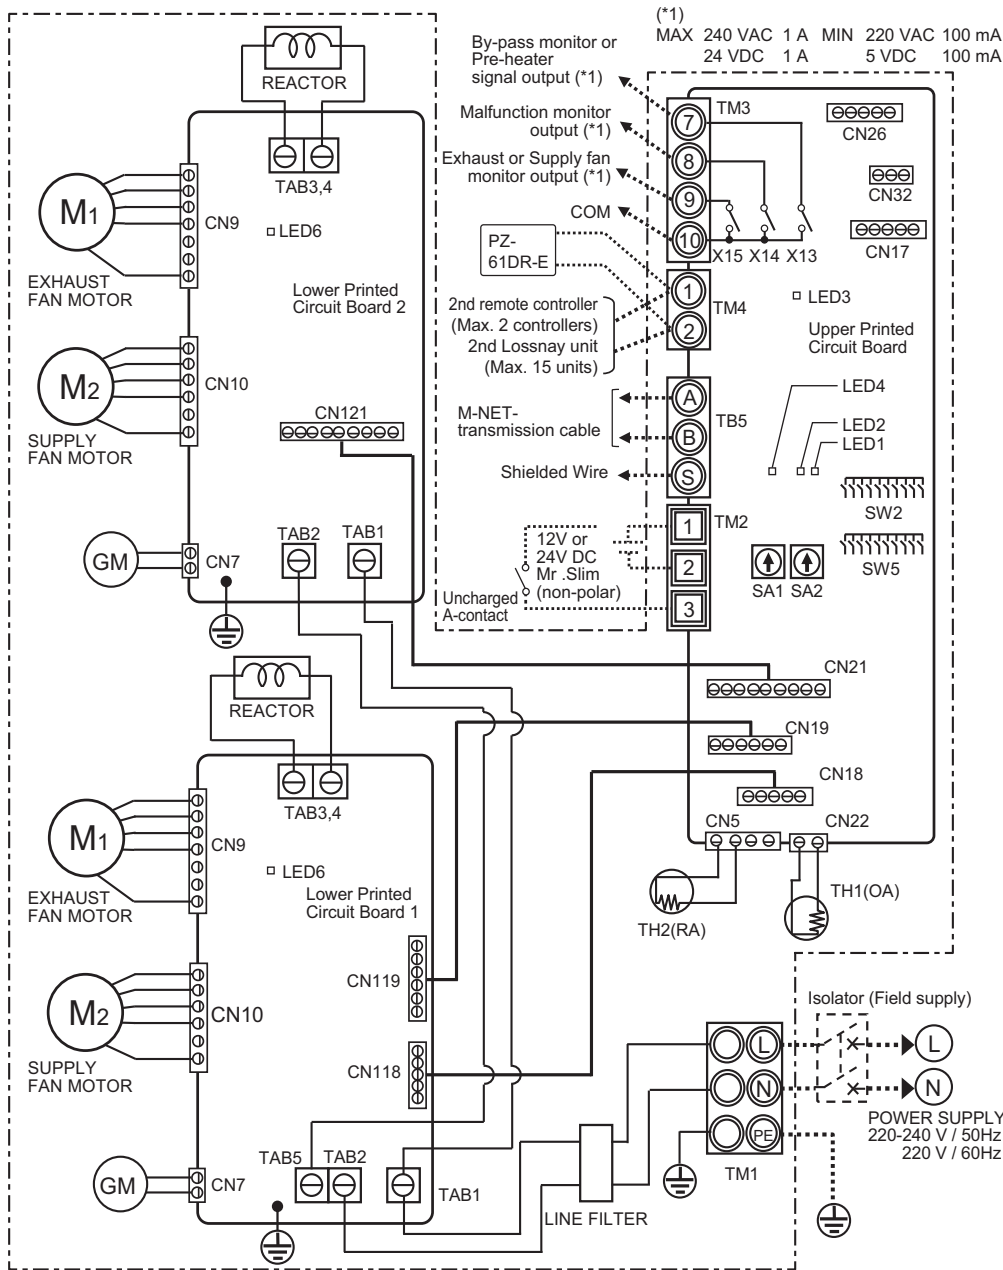

LGH-15 to 100RVX-E

- * TM1, TM2, TM3, TM4, TB5 shown in dotted lines are field work.
- * Be sure to connect the ground wire.
- * A power supply isolator must be installed.
- * Always use an isolator for the main switch power connection.
- * Specifications may be subject to change without notice.

TAB3, TAB4: Connector (Reactor)	CN22: Connector (Thermistor OA)	

LGH-150 and 200RVX-E

* TM1, TM2, TM3, TM4, TB5 shown in dotted lines are field work.

* Be sure to connect the ground wire.

* A power supply isolator must be installed.

* Always use an isolator for the main switch power connection.

* Specifications may be subject to change without notice.

OA Processing unit

OA Processing unit GUF-RD(H)₄ combines the characteristics of LOSSNAY and air conditioning function of indoor unit, offers perfect air conditioning in which fresh outdoor air, humidity, temperature adjustment are all considered. Moreover, GUF-RD(H)₄ realizes the air conditioning solution at the most energy saving method.

GUF Structure:

Permeable Film Humidifier (GUF-RDH Model)

Line up of OA Processing units

GUF-50RD ₄	500m ³ /h	1-phase 220-240V 50Hz
GUF-100RD ₄	1000m ³ /h	1-phase 220-240V 50Hz

The equipment is for R410A refrigerant. 3. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors. (For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.) 4. Indoor units P100, P125, P140 can be connected to 1 branch. (In this case, cooling capacity decrease a little.) 5. Refrigerant piping diameter for connection of plural indoor units with 1 branch shall be referred to the Installation Manual.

Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors. (For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.) 6. Indoor units P100, P125, P140 can be connected to 1 branch. (In this case, cooling capacity decrease a little.) 7. Refrigerant piping diameter for connection of plural indoor units with 1 branch shall be referred to the Installation Manual.

Unit : mm

- <Accessories>
- Refrigerant<Low pressure> conn. pipe.....2pcs.
 - Refrigerant<High pressure> conn. pipe.....1pc.
 - Drain hose I.D.32 (1-1/4").....1pc.
 - Hose band.....1pc.
 - Tie band.....1pc.

- Note 1. Suspension bolt(φ10), washer(M10), and nut(M10) prepare in the field.
 2. Take notice of service space as follows.
 (Please give attention not to occupy service space by letting ducts and pipes through.)
 3. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.
 (For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
 4. Refer to the Installation Manual for refrigerant piping diameter size when connecting plural indoor units with 1 branch.

- <Accessories>
- Refrigerant<Low pressure> conn. pipe.....1pc.
 - Drain hose I.D.32 (1-1/4").....1pc.
 - Hose band.....1pc.
 - Tie band.....1pc.

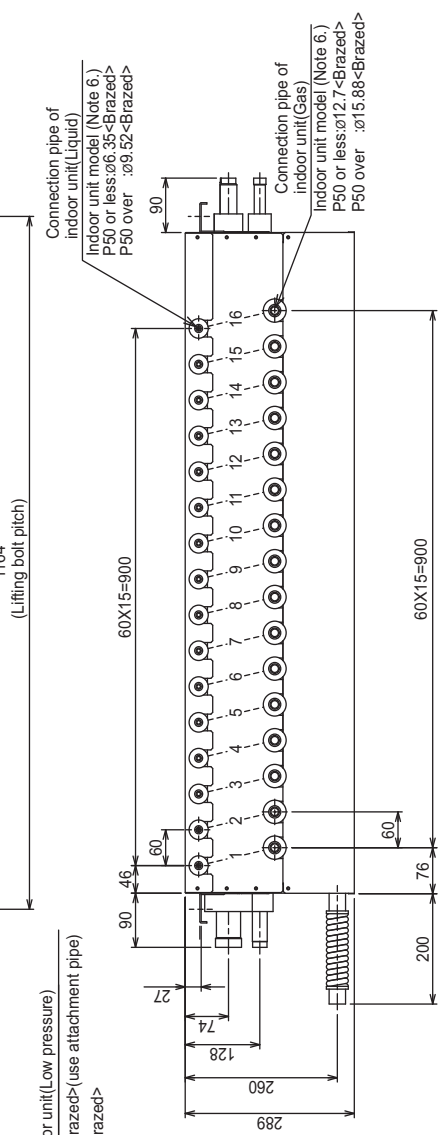

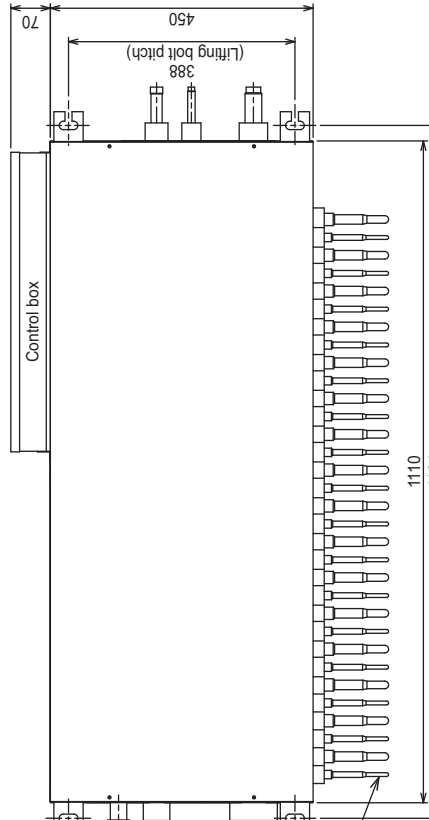

- Note1. Suspension bolt(φ10), washer(M10), and nut(M10) prepare in the field.
 2. Take notice of service space as follows.
 (Please give attention not to occupy service space by letting ducts and pipes through.)
 3. Please take service space for connection pipe of SUB BC CONTROLLER.
 4. When using an outdoor unit-28HP(P700) or more, use this product.
 5. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.
 (For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
 6. Refer to the Installation Manual for refrigerant piping diameter size when connecting plural indoor units with 1 branch.

Connection pipe of SUB BC CONTROLLER (High pressure)
 Total capacity of indoor unit at SUB BC CONTROLLER P200 or less: ø15.88<Brazed> (use attachment pipe of SUB BC CONTROLLER)
 P350 or less: ø19.05<Brazed> (use attachment pipe of JOINT<option>)

Connection pipe of SUB BC CONTROLLER (Liquid)
 Total capacity of indoor unit at SUB BC CONTROLLER P300 or less: ø9.52<Brazed> P400 or less: ø12.7<Brazed> (use attachment pipe of SUB BC CONTROLLER)
 P400 over: ø15.88<Brazed> (use attachment pipe of JOINT<option>)

Connection pipe of SUB BC CONTROLLER (Low pressure)
 Total capacity of indoor unit at SUB BC CONTROLLER P200 or less: ø19.05<Brazed> (use attachment pipe of SUB BC CONTROLLER)
 P300 or less: ø22.2<Brazed> (use attachment pipe of SUB BC CONTROLLER)

NO.	Usage	Specifications
①	For pipes	Front through hole 102 x 72 Knockout hole
②		Bottom through hole 150 x 94 Knockout hole
③	For wires	Front through hole ø65 or ø40 Knockout hole
④		Front through hole ø52 or ø27 Knockout hole
⑤		Bottom through hole ø65 Knockout hole
⑥	For transmission cables	Bottom through hole ø52 Knockout hole
⑦		Front through hole ø34 Knockout hole

PUHY-P200, 250YKB-A1(-BS)

Unit : mm

1. Required space around the unit

In case of single installation

- ① Secure enough space around the unit as shown in the figure below.
 - With a space of at least 300mm to the wall on the back of the unit

- ② When the height of the walls on the front, back or on the sides <H> exceeds the wall height limit as defined below add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.

In case of collective installation

- ① When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- ② At least two sides must be left open.
- ③ As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- ④ If there is a wall at both the front and the rear of the unit, install up to six units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each six units.

2. Foundation work

- ① Take into consideration the surface strength, water drainage route, piping route, and wiring route when preparing the installation site.
 - Note that the drain water comes out of the unit during operation.
- ② Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure. (Fig.A,B)
 - When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- ③ The protrusion length of the anchor bolt must not exceed 30mm. (Fig.A,B)
- ④ Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts. (Fig.C,D)
- ⑤ To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- ⑥ When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- ⑦ Refer to the Installation Manual when installing units on an installation base.

PUHY-P300, 350, 400YKB-A1(-BS)

Unit : mm

1. Required space around the unit

● In case of single installation

- ① Secure enough space around the unit as shown in the figure below.

· With a space of at least 300mm to the wall on the back of the unit

- ② When the height of the walls on the front, back or on the sides <H> exceeds the wall height limit as defined below add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.

<Wall height limit> Front : Up to the unit height
Back : Up to 500mm from the unit bottom
Side : Up to the unit height

2. Foundation work

- ① Take into consideration the surface strength, water drainage route, piping route and wiring route when preparing the installation site.
<Note that the drain water comes out of the unit during operation.>
- ② Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure.(Fig.A,B)
When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- ③ The protrusion length of the anchor bolt must not exceed 30mm.(Fig.A,B)
- ④ Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts.(Fig.C,D)
- ⑤ To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- ⑥ When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- ⑦ Refer to the Installation Manual when installing units on an installation base.

● In case of collective installation

- ① When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- ② At least two sides must be left open.
- ③ As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- ④ If there is a wall at both the front and the rear of the unit, install up to six units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each six units.

- <Accessories>
- Connecting pipe (ID28.58×OD28.58).....P450.500 1pc.
 - <Gas> ·Elbow (ID15.88×OD15.88).....P450.500 1pc.
 - <Liquid> ·Pipe (ID15.88×OD15.88).....P450.500 1pc.

Note 1. Please refer to the next page for information regarding necessary spacing around the unit and foundation work.

2. At brazing of pipes, wrap the refrigerant service valve with wet cloth and keep the temperature of refrigerant service valve under 120°C.

3. The detachable leg can be removed at site.

Connecting pipe specifications

Model	Refrigerant pipe *1		Service valve	
	Liquid	Gas	Liquid	Gas
PUHY-P450YKB-A1(-BS)	ø15.88 Brazed	ø28.58 Brazed	ø15.88	ø28.58
PUHY-P500YKB-A1(-BS)	ø15.88 Brazed	ø28.58 Brazed	ø15.88	ø28.58

*1 Connect by using the connecting pipes (for bottom piping and front piping) that are supplied.

NO.	Usage	Specifications	
		Front through hole	Bottom through hole
①	For pipes	102 × 72 Knockout hole	150 × 94 Knockout hole
②		150 × 94 Knockout hole	ø65 or ø40 Knockout hole
③		ø65 or ø40 Knockout hole	ø52 or ø27 Knockout hole
④	For wires	ø65 or ø40 Knockout hole	ø65 Knockout hole
⑤		ø52 or ø27 Knockout hole	ø52 Knockout hole
⑥		ø65 Knockout hole	ø34 Knockout hole
⑦	For transmission cables	Front through hole	Front through hole

PUHY-P450, 500YKB-A1(-BS)

Unit : mm

1. Required space around the unit

● In case of single installation

- Secure enough space around the unit as shown in the figure below.
 - With a space of at least 100mm to the wall on the back of the unit
- With a space of at least 300mm to the wall on the back of the unit

- When the height of the walls on the front, back or on the sides <H> exceeds the wall height limit as defined below add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.

<Wall height limit>
 Front : Up to the unit height
 Back : Up to 500mm from the unit bottom
 Side : Up to the unit height

2. Foundation work

- Take into consideration the surface strength, water drainage route, piping route, and wiring route when preparing the installation site.
 - Note that the drain water comes out of the unit during operation. >
- Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure. (Fig.A,B)
 - When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- The protrusion length of the anchor bolt must not exceed 30mm. (Fig.A,B)
- Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts. (Fig.C,D)
- To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- Refer to the Installation Manual when installing units on an installation base.

● In case of collective installation

- When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- At least two sides must be left open.
- As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- If there is a wall at both the front and the rear of the unit, install up to three units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each three units.

Measurement condition
PUHY-P1000, 1050, 1100YSKB-A1(-BS)

Sound level of PUHY-P1100YSKB-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	83.0	73.5	69.0	64.5	58.0	52.0	46.5	41.5	66.5
Low noise mode	50/60Hz	78.0	66.0	56.5	52.5	48.0	48.0	37.5	38.0	57.5

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PUHY-P1000YSKB-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	83.0	74.5	68.5	64.5	58.0	52.0	46.5	41.0	66.5
Low noise mode	50/60Hz	75.5	65.5	57.0	52.5	47.5	45.5	36.5	37.5	56.5

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PUHY-P1050YSKB-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	83.0	74.0	68.5	64.5	58.0	52.0	46.5	41.5	66.5
Low noise mode	50/60Hz	76.0	65.0	56.5	52.5	47.0	46.5	36.5	37.5	56.5

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

• Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes when operating normally. Please consider to avoid location where quietness is required.

7. OPERATION TEMPERATURE RANGE

• Cooling

• Heating

8-1. Selection of Cooling/Heating Units

<Cooling>

Design Condition	
Outdoor Design Dry Bulb Temperature	43 °C
Total Cooling Load	18.0 kW
Room1	
Indoor Design Dry Bulb Temperature	27 °C
Indoor Design Wet Bulb Temperature	20 °C
Cooling Load	8.0 kW
Room2	
Indoor Design Dry Bulb Temperature	24 °C
Indoor Design Wet Bulb Temperature	17 °C
Cooling Load	10.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

1. Cooling Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	9 kW (Rated)
Room2	PEFY-P100	11.2 kW (Rated)

(2) Total Indoor Units Capacity

P80 + P100 = P180

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	22.4 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Wet Bulb Temperature Correction (20°C)	1.04 (Refer to Fig.1)
Room2	Indoor Design Wet Bulb Temperature Correction (17°C)	0.95 (Refer to Fig.1)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 9.0 \times 1.04 + 11.2 \times 0.95$$

$$= 20.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Dry Bulb Temperature Correction (43°C)	0.94 (Refer to Fig.2)
Piping Length Correction (50 m)	0.94 (Refer to Fig.3)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction}$$

$$= 22.4 \times 0.94 \times 0.94$$

$$= 19.9 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

CTi = 20.0 > CTo = 19.9, thus, select CTo.

CTx = CTo = 19.9 kW

(7) Comparison with Essential Load

Against the essential load 18.0kW, the maximum system capacity is 19.9kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

CTx = CTo, thus, calculate by the calculation below

Room1

$$\text{Maximum Capacity} \times \text{Room1 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (9.0 \times 1.04) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 9.3 \text{ kW} \quad \text{OK: fulfills the load 8.0kW}$$

Room2

$$\text{Maximum Capacity} \times \text{Room2 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (11.2 \times 0.95) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 10.6 \text{ kW} \quad \text{OK: fulfills the load 10.0kW}$$

Go on to the heating trial calculation since the selected units fulfill the cooling loads of Room 1, 2.

Fig.1 Indoor unit temperature correction
To be used to correct indoor unit only

Fig.2 Outdoor unit temperature correction
To be used to correct outdoor unit only

Fig.3 Correction of refrigerant piping length

<Heating>

Design Condition	
Outdoor Design Wet Bulb Temperature	-3 °C
Total Heating Load	20.5 kW
Room1	
Indoor Design Dry Bulb Temperature	21 °C
Heating Load	9.5 kW
Room2	
Indoor Design Dry Bulb Temperature	23 °C
Heating Load	11.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

2. Heating Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	10 kW (Rated)
Room2	PEFY-P100	12.5 kW (Rated)

(2) Total Indoor Units Capacity

P80 + P100 = P180

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	25.0 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Dry Bulb Temperature Correction (21°C)	0.97 (Refer to Fig.4)
Room2	Indoor Design Dry Bulb Temperature Correction (23°C)	0.90 (Refer to Fig.4)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 10.0 \times 0.97 + 12.5 \times 0.90$$

$$= 21.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Wet Bulb Temperature Correction (-3°C)	0.98 (Refer to Fig.5)
Piping Length Correction (50 m)	0.97 (Refer to Fig.6)
Defrost Correction	0.89 (Refer to Tbl.1)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Unit Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction} \times \text{Defrost Correction}$$

$$= 25.0 \times 0.98 \times 0.97 \times 0.89$$

$$= 21.1 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

CTi = 21.0 < CTo = 21.1, thus, select CTi.

CTx = CTi = 21.0 kW

(7) Comparison with Essential Load

Against the essential load 20.5kW, the maximum system capacity is 21.0kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

CTx = CTi, thus, calculate by the calculation below

Room1	Indoor Unit Rating × Indoor Design Temperature Correction	OK: fulfills the load 9.5kW
	= 10.0 × 0.97	
	= 9.7 kW	

Room2	Indoor Unit Rating × Indoor Design Temperature Correction	OK: fulfills the load 11.0kW
	= 12.5 × 0.90	
	= 11.3 kW	

Completed selecting units since the selected units fulfill the heating loads of Room 1, 2.

8-4. Correction by refrigerant piping length

CITY MULTI system can extend the piping flexibly within its limitation for the actual situation. However, a decrease of cooling/heating capacity could happen correspondently. Using following correction factor according to the equivalent length of the piping shown at 8-4-1 and 8-4-2, the capacity can be observed. 8-4-3 shows how to obtain the equivalent length of piping.

8-4-1. Cooling capacity correction

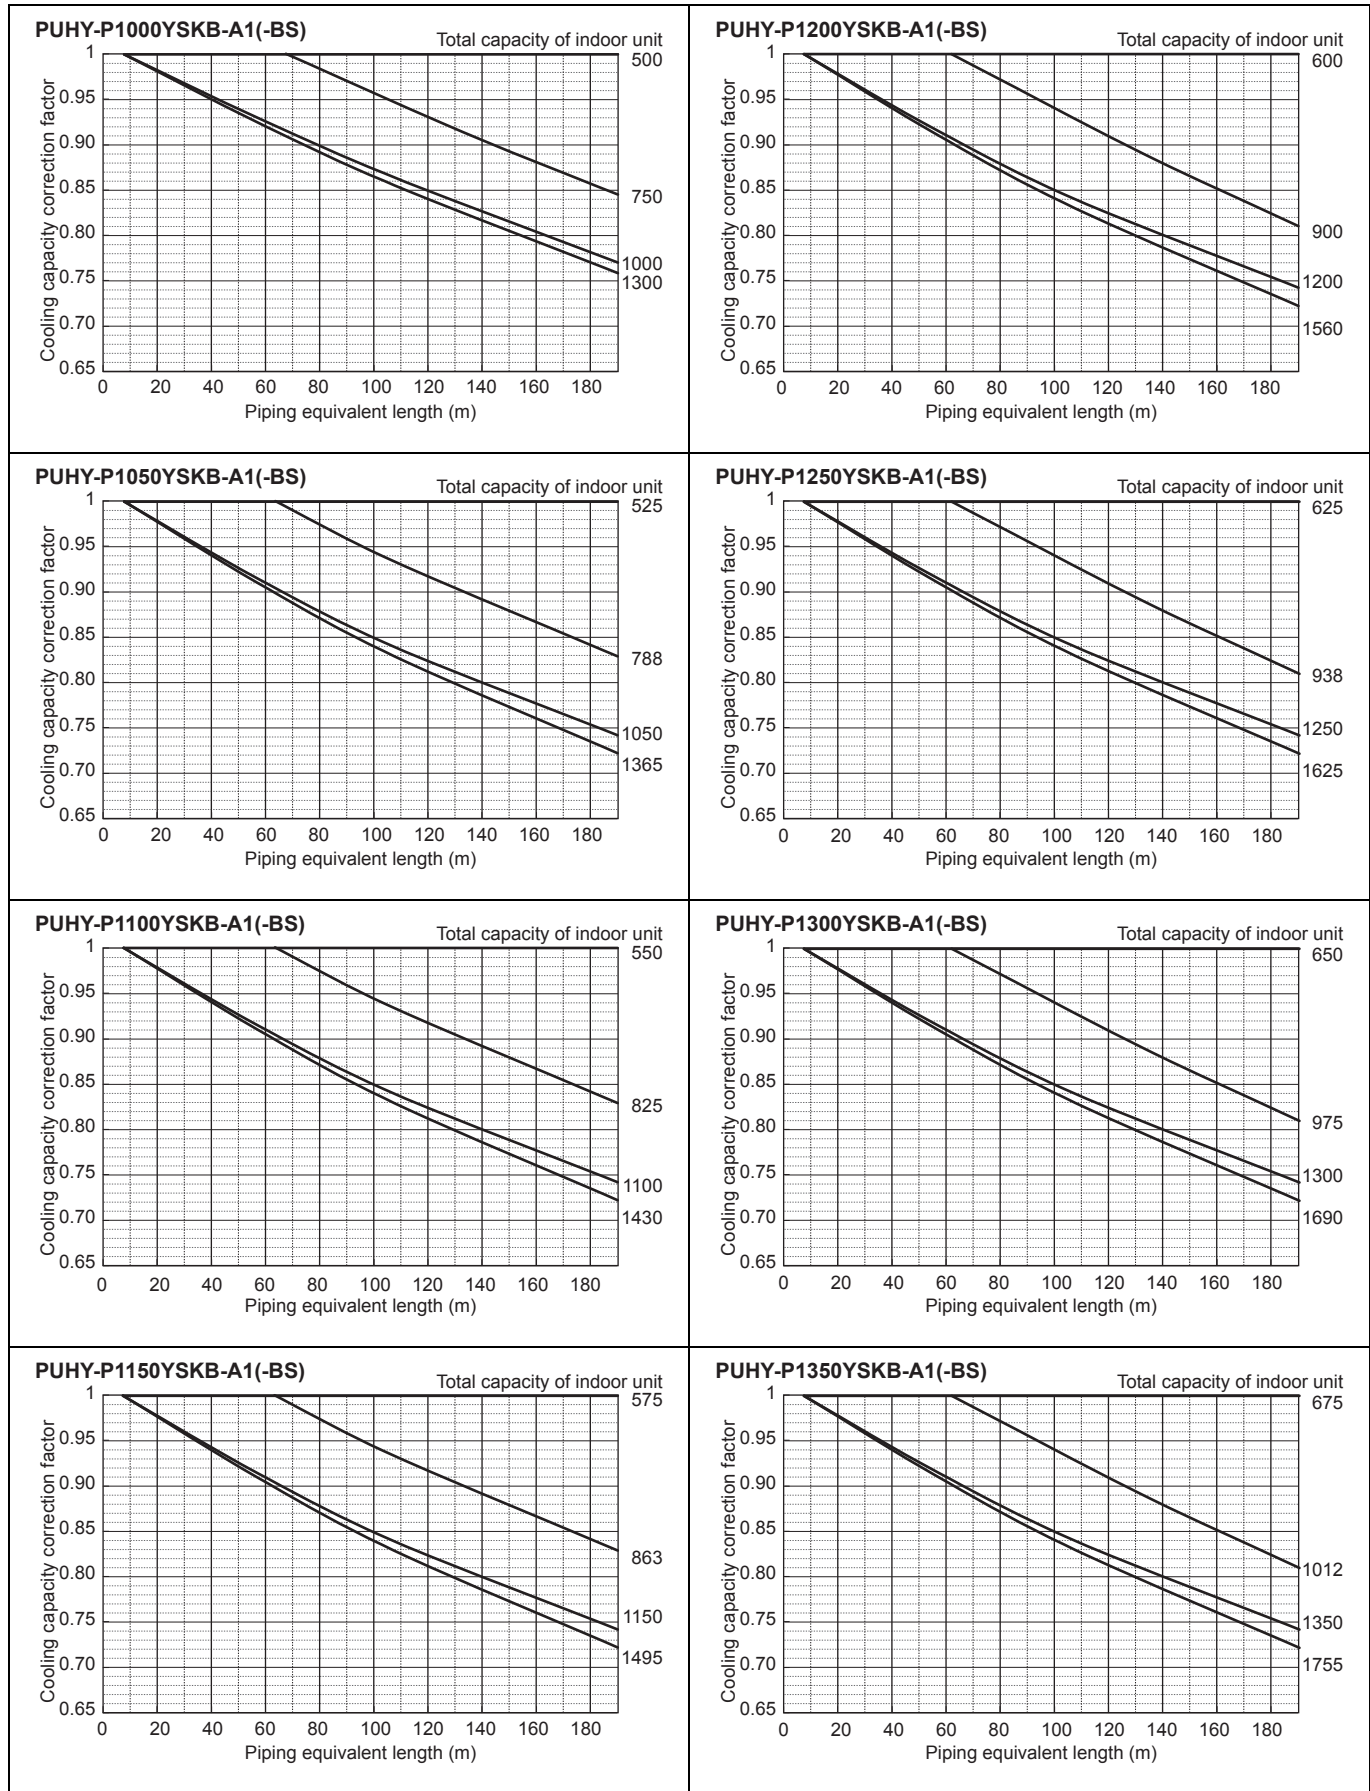

8. CAPACITY TABLES

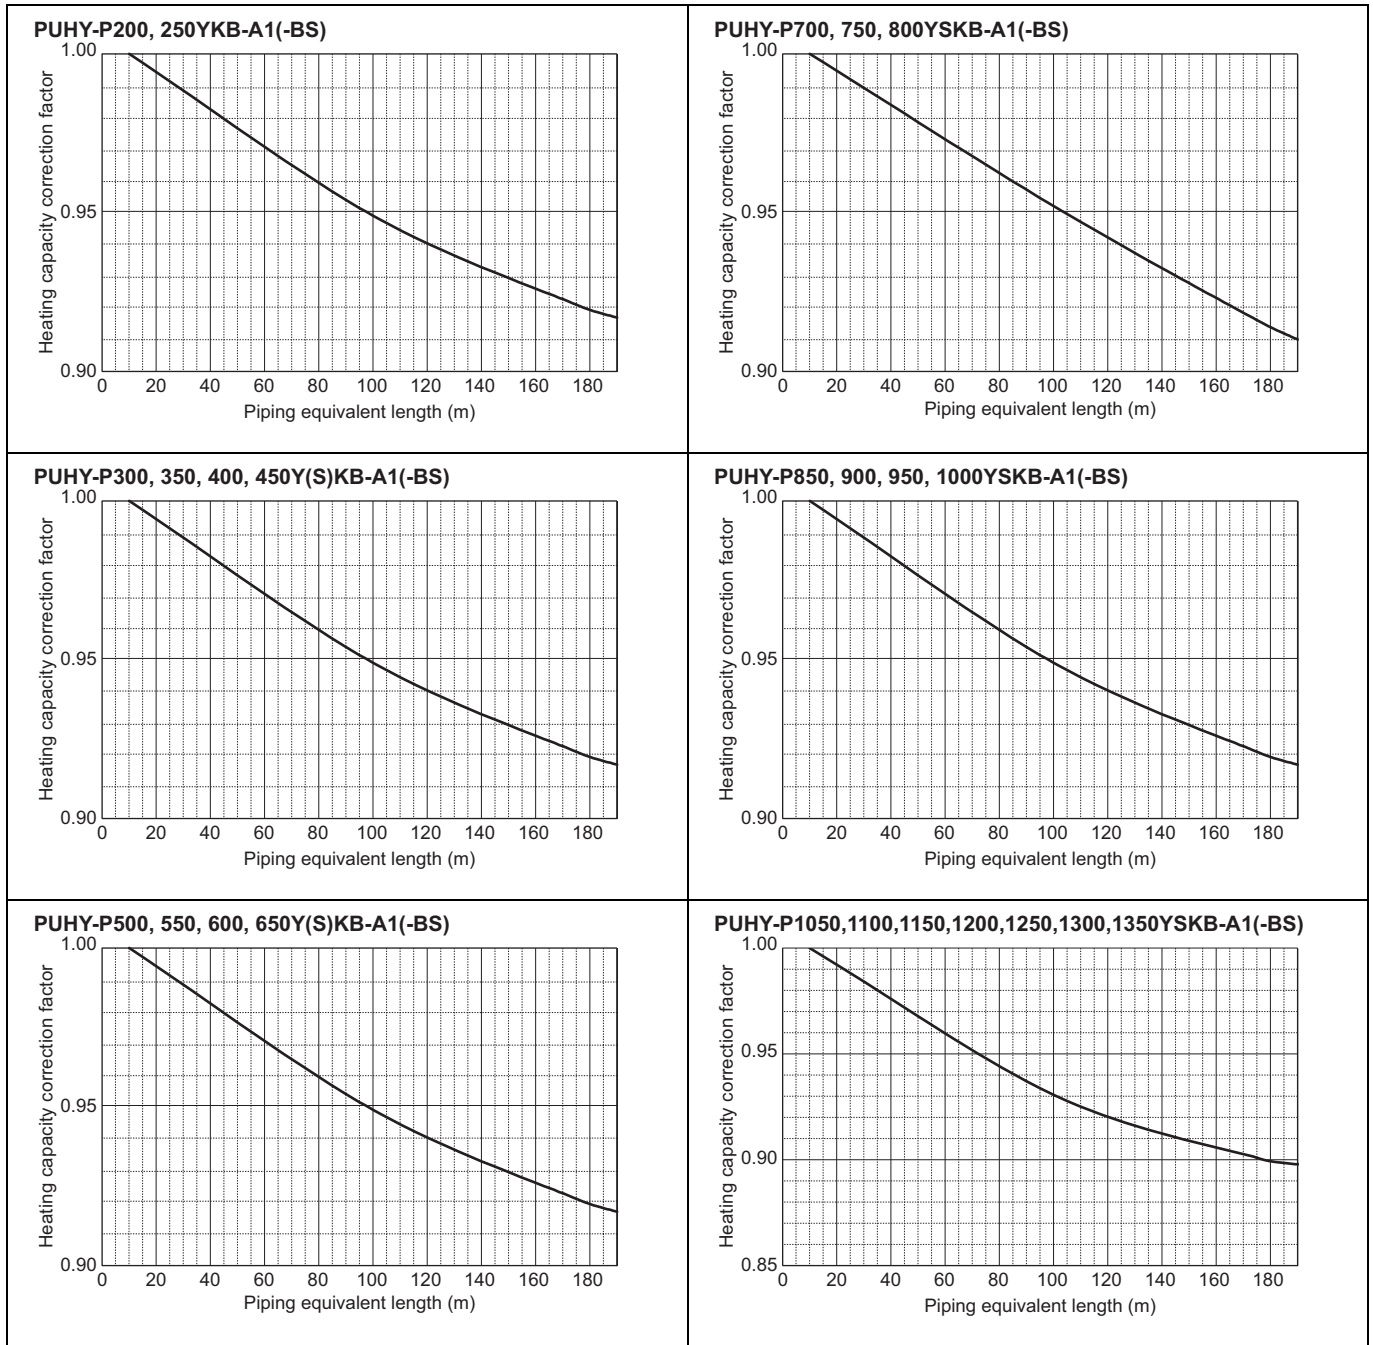

8. CAPACITY TABLES

Y

8-4-2. Heating capacity correction

8-4-3. How to obtain the equivalent piping length

- 1 **PUHY-P200YKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m
- 2 **PUHY-P250YKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m
- 3 **PUHY-P300YKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m
- 4 **PUHY-P350YKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.47 × number of bends in the piping) m
- 5 **PUHY-P400, 450, 500, 550, 600, 650Y(S)KB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.50 × number of bends in the piping) m
- 6 **PUHY-P700, 750, 800YSKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.70 × number of bends in the piping) m
- 7 **PUHY-P850, 900, 950, 1000, 1050, 1100, 1150, 1200, 1250, 1300, 1350YSKB-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.80 × number of bends in the piping) m

8-5. Correction at frost and defrost

Due to frost at the outdoor heat exchanger and the automatic defrost operation, the heating capacity of the outdoor unit can be calculated by multiplying the correction factor shown in the table below.

Table of correction factor at frost and defrost

Outdoor inlet air temp. °C	6	4	2	1	0	-2	-4	-6	-8	-10	-20
Outdoor inlet air temp. °F	43	39	36	34	32	28	25	21	18	14	-4

9-1. JOINT

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Four kinds of Joint sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Joint set for how to install the Joint set.

9-2. HEADER

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Three kinds of Header sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Header set for how to install the Header set.

CMY-Y104-G mm

For Gas pipe:

For Liquid pipe:

ID: Inner Diameter OD: Outer Diameter
 NOTE: Besides above mentioned accessories, caps for pipe of $\phi 6.35$, $\phi 9.52$, $\phi 12.7$, $\phi 15.88$ (each diameter 1 piece) are included in the Header set.

CMY-Y108-G mm

For Gas pipe:

For Liquid pipe:

ID: Inner Diameter OD: Outer Diameter
 NOTE: Besides above mentioned accessories, caps for pipe of $\phi 6.35$, $\phi 9.52$, $\phi 12.7$, $\phi 15.88$ (each diameter 2 pieces) and 1 cap for pipe of $\phi 19.05$ are included in the Header set.

CMY-Y1010-G mm

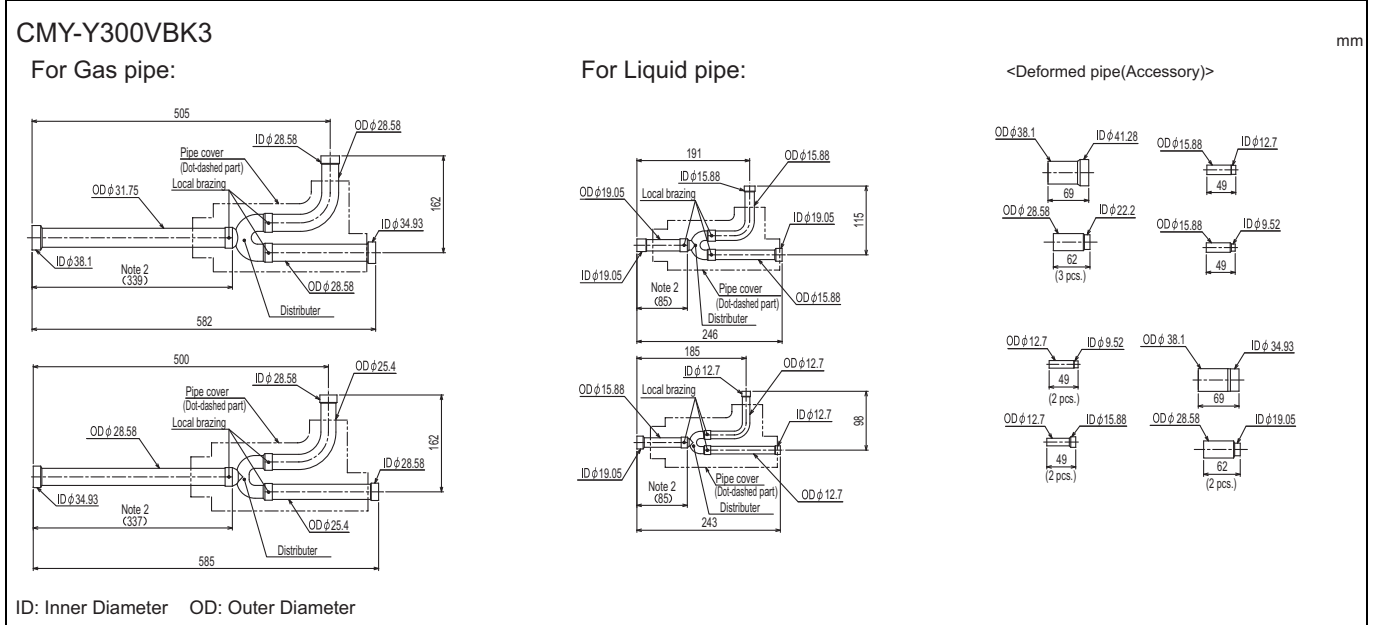

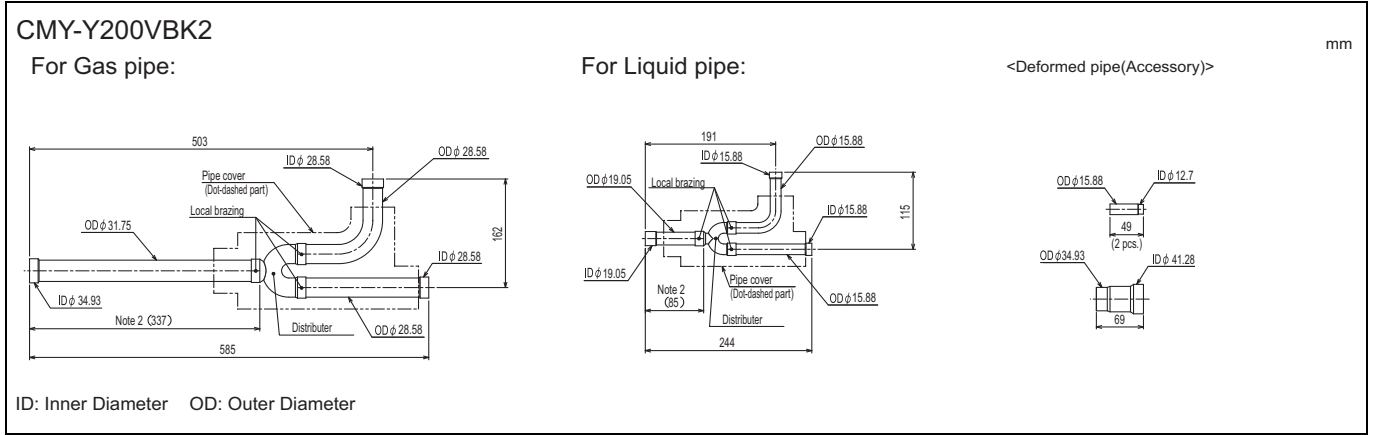

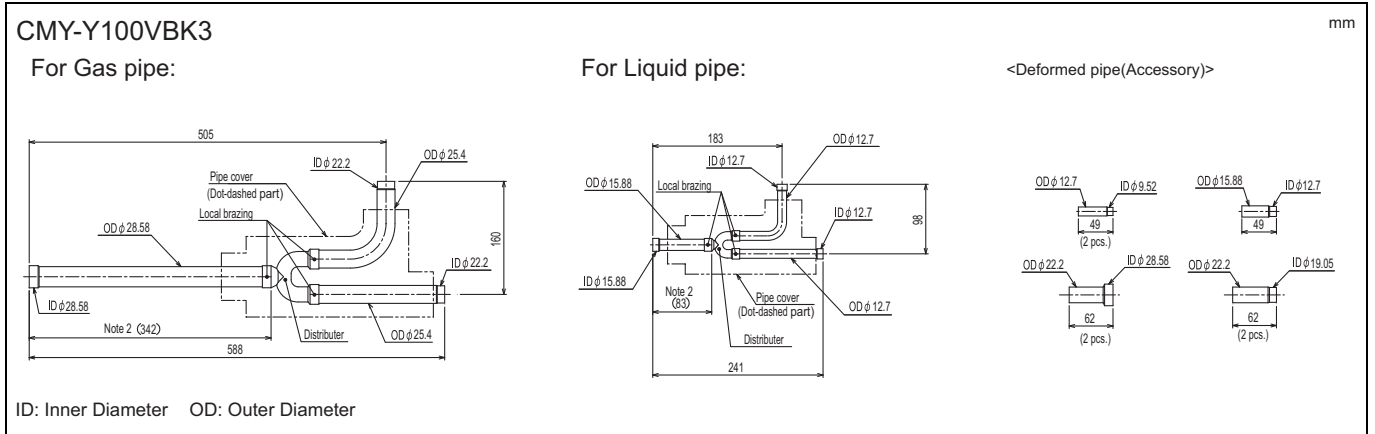

For Gas pipe:

For Liquid pipe:

ID: Inner Diameter OD: Outer Diameter
 NOTE: Besides above mentioned accessories, caps for pipe of $\phi 6.35$, $\phi 9.52$, $\phi 12.7$, $\phi 15.88$ (each diameter 2 pieces) and 1 cap for pipe of $\phi 19.05$ are included in the Header set.

9-3. OUTDOOR TWINNING KIT

The following optional Outdoor Twinning Kit is needed to use to combine multiple refrigerant pipes. Refer to the chapter entitled System Design Section for the details of selecting a proper twinning kit.

Note 1. Refer to the figure below for the installation position of the twinning pipe.

Slope of the twinning pipes are at an angle within $\pm 15^\circ$ to the horizontal plane.

2. Use the attached pipe to braze the port-opening of the twinning pipe.
3. Pipe diameter is indicated by inside diameter.
4. Only use the twinning pipe by Mitsubishi (optional parts).

9-4. RELAY BOX

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. PAC-BH02KTY-E is a relay box for controlling the electric base heater. For details, refer to the relay box Installation Manual.

9-5. BASE HEATER

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. For details, refer to the base heater Installation Manual.

PAC-BH04EHT-E (for S module)

PAC-BH05EHT-E (for L module)

PAC-BH06EHT-E (for XL module)

PUHY-EP200, 250YLM-A1 (-BS)

Unit: mm

- <Accessories>
 • Connecting pipe
 <Gas>
 • Pipe (IDø28.58×ODø22.2) ... EP200, EP250 1 pc.
 • Elbow (IDø28.58×ODø28.58) ... EP200, EP250 1 pc.
 <Liquid>
 • Pipe (IDø9.52×IDø12.7) ... EP250 1 pc.

Note 1. Please refer to the next page for information regarding necessary spacing around the unit and foundation work.

- The detachable leg can be removed at site.
- At brazing of pipes, wrap the refrigerant service valve with wet cloth and keep the temperature of refrigerant service valve under 120°C.

Connecting pipe specifications

Model	Refrigerant pipe		Service valve	
	Liquid	Gas	Liquid	Gas
PUHY-EP200YLM-A1(-BS)	ø9.52 Braze ^{*1}	ø22.2 Braze ^{*1,2}	ø9.52	ø28.58
PUHY-EP250YLM-A1(-BS)	ø9.52 Braze ^{*1}	ø22.2 Braze ^{*1,2}	ø9.52	ø28.58

*1 Use the included connecting pipe and connect to the refrigerant service valve piping

*2 Furthest piping length (OU from IU) ≥ 90m

NO.	Usage	Specifications
①	For pipes	Front through hole 140 × 77 Knockout hole
②		Bottom through hole 150 × 94 Knockout hole
③	For wires	Front through hole ø65 or ø40 Knockout hole
④		Front through hole ø52 or ø27 Knockout hole
⑤		Bottom through hole ø65 Knockout hole
⑥	For transmission cables	Bottom through hole ø52 Knockout hole
⑦		Front through hole ø34 Knockout hole

PUHY-EP300, 350YLM-A1 (-BS)

Unit: mm

● In case of collective installation

- ① When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- ② At least two sides must be left open.
- ③ As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- ④ If there is a wall at both the front and the rear of the unit, install up to six units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each six units.

<Wall height limit> Front: Up to the unit height
 Back: Up to 500mm from the unit bottom
 Side : Up to the unit height

2. Foundation work

- ① Take into consideration the surface strength, water drainage route, piping route, and wiring route when preparing the installation site.
 <Note that the drain water comes out of the unit during operation.>
- ② Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure.(Fig.A,B)
 When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- ③ The protrusion length of the anchor bolt must not exceed 30mm.(Fig.A,B)
- ④ Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts.(Fig.C,D)
- ⑤ To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- ⑥ When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- ⑦ Refer to the Installation Manual when installing units on an installation base.

Fig.A (without detachable legs)

Unit : mm

Twinning pipe connection size

Package unit name	PUHY-EP600YSLM-A1(-BS)
Component unit name	Outdoor unit 1 PUHY-EP300YLM-A1(-BS) Outdoor unit 2 PUHY-EP300YLM-A1(-BS)
Outdoor Twinning Kit(optional parts)	CMY-Y100VBK3
Indoor unit~ Twinning pipe	Liquid a Gas b
	ø15.88 ø28.58

	Unit model	Liquid	Gas
	EP300	c or e ø12.7	d or f ø28.58

- Note 1. Connect the pipes as shown in the figure above. Refer to the table above for the pipe size.
 2. Twinning pipes should not be tilted more than 15 degrees from the horizontal plane.
 3. Be sure to see the Installation Manual for details of Twinning pipe installation.
 4. The pipe section before the Twinning pipe (sections "a" and "b" in the figure) must have at least 500mm of straight section (*including the straight pipe that is supplied with the Twinning pipe).
 5. Only use the Twinning pipe by Mitsubishi (optional parts).
 6. The detachable leg can be removed at site.

- *1. Single-dotted lines indicate wiring not supplied with the unit.
- *2. Dot-dash lines indicate the control box boundaries.
- *3. Refer to the Data book for connecting input/output signal connectors.
- *4. Daisy-chain terminals (TB3) on the outdoor units in the same refrigerant system together.
- *5. Faston terminals have a locking function. Make sure the terminals are securely locked in place after insertion. Press the tab on the terminals to removed them.
- *6. Control box houses high-voltage parts. Before inspecting the inside of the control box, turn off the power, keep the unit off for at least 10 minutes, and confirm that the voltage between FT-P and FT-N on INV Board has dropped to DC20V or less.

<Symbol explanation>

Symbol	Explanation
Z1S3a	4-way valve
Z1S3b	Cooling/Heating switching
63HT	Heat exchanger capacity control
63HS1	High pressure protection for the
63LS	Pressure
ZC	Discharge pressure
C30-C37	Low pressure
C12, C72, C73	Magnetic relay (inverter main circuit)
DCL	Capacitor (inverter main circuit)
LE1	DC reactor
LE1,2	Choke coil (for high frequency noise reduction)
LE1,2a,b	Linear expansion valve
RT1,5	HIC bypass; Controls refrigerant flow in HIC circuit.
RS101/02/RS11	Pressure control/Refrigerant flow rate sensor
SV1a	Resistor
SV2	For brush current prevention
SV9	Solenoid valve
SV10, SV11	For opening/closing the bypass circuit
TB1	For opening/closing the bypass circuit
TB3	Terminal block
TB7	Indoor/Outdoor transmission cable
TH2	Central control transmission cable temperature
TH3	Sub-cool bypass outlet temperature
TH4	Pipe temperature
TH5	Discharge pipe temperature
TH6	ACC inlet pipe temperature
TH7	Sub-cooled liquid refrigerant temperature
TH9, TH11	OA temperature
THS	Heat exchanger outlet pipe temperature
Z25	IPM temperature
	Function setting connector

Standard	50/60Hz	80.0	75.5	69.5	66.0	61.0	55.5	52.0	46.5	68.0
Low noise mode	50/60Hz	71.5	67.0	53.5	52.5	51.0	51.5	45.0	38.0	58.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PUHY-EP1250YSLM-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	81.0	75.5	69.0	65.0	60.5	56.0	51.0	45.0	67.5
Low noise mode	50/60Hz	69.5	66.5	55.0	52.5	50.5	50.5	44.5	38.5	57.5

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PUHY-EP1350YSLM-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	80.0	76.0	69.5	66.0	61.0	56.0	52.0	46.0	68.0
Low noise mode	50/60Hz	71.0	67.0	53.5	52.5	51.0	51.5	45.0	38.0	58.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

♦ Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes when operating normally. Please consider to avoid location where quietness is required.

[PUHY-EP200-500YLM, PUHY-EP550-1350YSLM]

Measurement condition

Measurement frequency: 1 Hz-80 Hz

Measurement point: Ground surface 20 cm away from the unit leg

Installation condition: Direct installation on the concrete floor

Power source: 3-phase 4-wire 380-400-415 V 50/60 Hz

Operation condition: JIS condition (cooling, heating)

Measurement device: Vibration level meter for vibration pollution VM-1220C (JIS-compliant product)

Y (HIGH COP)

• Cooling

• Heating

Section 8-1.

Shows an example of how to select the indoor and outdoor units according to the required heating/cooling load.

Section 8-2. through 8-5.

Show the actual correction data of indoor and outdoor units.

8-1. Selection of Cooling/Heating Units

<Cooling>

Design Condition	
Outdoor Design Dry Bulb Temperature	43 °C
Total Cooling Load	18.0 kW
Room1	
Indoor Design Dry Bulb Temperature	27 °C
Indoor Design Wet Bulb Temperature	20 °C
Cooling Load	8.0 kW
Room2	
Indoor Design Dry Bulb Temperature	24 °C
Indoor Design Wet Bulb Temperature	17 °C
Cooling Load	10.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

1. Cooling Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	9 kW (Rated)
Room2	PEFY-P100	11.2 kW (Rated)

(2) Total Indoor Units Capacity

$P80 + P100 = P180$

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	22.4 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Wet Bulb Temperature Correction (20°C)	1.04 (Refer to Fig.1)
Room2	Indoor Design Wet Bulb Temperature Correction (17°C)	0.95 (Refer to Fig.1)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 9.0 \times 1.04 + 11.2 \times 0.95$$

$$= 20.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Dry Bulb Temperature Correction (43°C)	0.94 (Refer to Fig.2)
Piping Length Correction (50 m)	0.94 (Refer to Fig.3)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction}$$

$$= 22.4 \times 0.94 \times 0.94$$

$$= 19.9 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

$CTi = 20.0 > CTo = 19.9$, thus, select CTo.

$CTx = CTo = 19.9 \text{ kW}$

(7) Comparison with Essential Load

Against the essential load 18.0kW, the maximum system capacity is 19.9kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

$CTx = CTo$, thus, calculate by the calculation below

Room1

$$\text{Maximum Capacity} \times \text{Room1 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (9.0 \times 1.04) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 9.3 \text{ kW} \quad \text{OK: fulfills the load 8.0kW}$$

Room2

$$\text{Maximum Capacity} \times \text{Room2 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (11.2 \times 0.95) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 10.6 \text{ kW} \quad \text{OK: fulfills the load 10.0kW}$$

Go on to the heating trial calculation since the selected units fulfill the cooling loads of Room 1, 2.

Fig.1 Indoor unit temperature correction
To be used to correct indoor unit only

Fig.2 Outdoor unit temperature correction
To be used to correct outdoor unit only

Fig.3 Correction of refrigerant piping length

<Heating>

Design Condition	
Outdoor Design Wet Bulb Temperature	-3 °C
Total Heating Load	20.5 kW
Room1	
Indoor Design Dry Bulb Temperature	21 °C
Heating Load	9.5 kW
Room2	
Indoor Design Dry Bulb Temperature	23 °C
Heating Load	11.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

2. Heating Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	10 kW (Rated)
Room2	PEFY-P100	12.5 kW (Rated)

(2) Total Indoor Units Capacity

P80 + P100 = P180

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	25.0 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Dry Bulb Temperature Correction (21°C)	0.97 (Refer to Fig.4)
Room2	Indoor Design Dry Bulb Temperature Correction (23°C)	0.90 (Refer to Fig.4)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 10.0 \times 0.97 + 12.5 \times 0.90$$

$$= 21.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Wet Bulb Temperature Correction (-3°C)	0.98 (Refer to Fig.5)
Piping Length Correction (50 m)	0.97 (Refer to Fig.6)
Defrost Correction	0.89 (Refer to Tbl.1)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Unit Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction} \times \text{Defrost Correction}$$

$$= 25.0 \times 0.98 \times 0.97 \times 0.89$$

$$= 21.1 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

CTi = 21.0 < CTo = 21.1, thus, select CTi.

CTx = CTi = 21.0 kW

(7) Comparison with Essential Load

Against the essential load 20.5kW, the maximum system capacity is 21.0kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

CTx = CTi, thus, calculate by the calculation below

Room1	Indoor Unit Rating × Indoor Design Temperature Correction	
	= 10.0 × 0.97	
	= 9.7 kW	OK: fulfills the load 9.5kW
Room2	Indoor Unit Rating × Indoor Design Temperature Correction	
	= 12.5 × 0.90	
	= 11.3 kW	OK: fulfills the load 11.0kW

Tbl.1 Table of correction factor at frost and defrost

Outdoor inlet air temp. °C	6	4	2	1	0	-2	-4	-6	-8	-10	-20
Outdoor inlet air temp. °F	43	39	36	34	32	28	25	21	18	14	-4
PUHY-P200	1.00	0.95	0.84	0.825	0.83	0.87	0.90	0.95	0.95	0.95	0.95
PUHY-P250	1.00	0.95	0.84	0.825	0.83	0.87	0.90	0.95	0.95	0.95	0.95
PUHY-P300	1.00	0.93	0.82	0.80	0.82	0.86	0.90	0.90	0.95	0.95	0.95
PUHY-P350	1.00	0.93	0.85	0.83	0.84	0.86	0.90	0.90	0.95	0.95	0.95
PUHY-P400	1.00	0.93	0.85	0.83	0.84	0.86	0.90	0.90	0.95	0.95	0.95

Completed selecting units since the selected units fulfill the heating loads of Room 1, 2.

8-4. Correction by refrigerant piping length

CITY MULTI system can extend the piping flexibly within its limitation for the actual situation. However, a decrease of cooling/heating capacity could happen correspondently. Using following correction factor according to the equivalent length of the piping shown at 8-4-1 and 8-4-2, the capacity can be observed. 8-4-3 shows how to obtain the equivalent length of piping.

8-4-1. Cooling capacity correction

Y (HIGH COP)

8. CAPACITY TABLES

Y (HIGH COP)

8-4-2. Heating capacity correction

8-4-3. How to obtain the equivalent piping length

- 1 **PUHY-EP200YLM-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m
- 2 **PUHY-EP250YLM-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m
- 3 **PUHY-EP300YLM-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.47 × number of bends in the piping) m
- 4 **PUHY-EP350YLM-A1(-BS)**
Equivalent length = (Actual piping length to the farthest indoor unit) + (0.47 × number of bends in the piping) m

9-1. JOINT

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Four kinds of Joint sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Joint set for how to install the Joint set.

9-2. HEADER

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Three kinds of Header sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Header set for how to install the Header set.

9-3. OUTDOOR TWINNING KIT

The following optional Outdoor Twinning Kit is needed to use to combine multiple refrigerant pipes. Refer to the chapter entitled System Design Section for the details of selecting a proper twinning kit.

Note 1. Refer to the figure below for the installation position of the twinning pipe.

Slope of the twinning pipes are at an angle within $\pm 15^\circ$ to the horizontal plane.

2. Use the attached pipe to braze the port-opening of the twinning pipe.
3. Pipe diameter is indicated by inside diameter.
4. Only use the twinning pipe by Mitsubishi (optional parts).

9-4. RELAY BOX

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. PAC-BH02KTY-E is a relay box for controlling the electric base heater. For details, refer to the relay box Installation Manual.

Y (HIGH COP)

9-5. BASE HEATER

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. For details, refer to the base heater Installation Manual.

⑦	Bottom through hole	ϕ 52 Knockout hole
⑧	For transmission cables	ϕ 34 Knockout hole

PURY-P200, 250YLM-A1 (-BS)

Unit : mm

1. Required space around the unit

● In case of single installation

① Secure enough space around the unit as shown in the figure below.

With a space of at least 100mm to the wall on the back of the unit

<Unit:mm>

② When the height of the walls on the front, back or on the sides <H> exceeds the wall height limit as defined below add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.

<Wall height limit> Front: Up to the unit height
Back : Up to 500mm from the unit bottom
Side : Up to the unit height

2. Foundation work

- Take into consideration the surface strength, water drainage route, piping route, and wiring route when preparing the installation site.
<Note that the drain water comes out of the unit during operation.>
- Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure. (Fig.A,B)
When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- The protrusion length of the anchor bolt must not exceed 30mm. (Fig.A,B)
- Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts. (Fig.C,D)
- To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- Refer to the Installation Manual when installing units on an installation base.

● In case of collective installation

- When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- At least two sides must be left open.
- As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- If there is a wall at both the front and the rear of the unit, install up to six units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each six units.

Component unit name	Outdoor unit 1 PURY-P300YLM-A1(-BS) Outdoor unit 2 PURY-P250YLM-A1(-BS)
Outdoor Twinning Kit (optional parts)	CMY-R100VBK2
BC controller~ Twinning pipe	High pressure a Low pressure b
	ø28.58 ø28.58

Unit model	P550
Component unit model	P300 P250
Twinning Kit	High pressure c ø19.05 e ø19.05 Low pressure d - (Note 5) f ø22.2

- Note 1. Connect the pipes as shown in the figure above. Refer to the table above for the pipe size.
2. Twinning pipe (High pressure) should not be tilted more than 15 degrees from the horizontal plane. Be sure to see the Installation Manual for details of Twinning pipe installation.
3. The pipe section before the Twinning pipe (section "a" in the figure) must have at least 500mm of straight section (*including the straight pipe that is supplied with the Twinning pipe).
4. Only use the Twinning pipe by Mitsubishi (optional parts).
5. Connect the outdoor unit 1 with the Twinning pipe (Low pressure) (section "d" in the figure).
6. The detachable leg can be removed at site.

EP200/250/300/350	*7 exist

<Symbol explanation>

Symbol	Explanation
21S4a	4-way valve(Cooling/Heating switching)
63H1	High pressure protection for the outdoor unit
63HS1	Discharge pressure sensor
63LS	Low pressure sensor
C30-C37	Magnetic relay(inverter main circuit)
CT12,CT22,CT3	Capacitor (inverter main circuit)
DCL	DC reactor
LEV5a	Choke coil (for high frequency noise reduction)
R1.5	Linear expansion valve (for the control of evaporating temperature)
RSH1/02/RSH1	Resistor
SV1a	For inrush current prevention
SV4a,b,d	For opening/closing the bypass circuit under the OS
SV5b	Solenoid valve
SV7,SV9	Heat exchanger capacity control
SV10,SV11	Outdoor unit heat exchanger capacity control
TB1	For opening/closing the bypass circuit
TB3	Terminal block
TB7	Power supply Indoor/Outdoor transmission cable
TH3	Central control transmission cable
TH4	Pipe temperature
TH5	Discharge pipe temperature
TH6	ACC inlet pipe temperature
TH7	Subcooled liquid refrigerant temperature
TH9,TH11	GA temperature
THHS	Heat exchanger outlet pipe temperature
THHS	IPM temperature
Z25	Function setting connector

Low noise mode	50/60Hz	61.0	57.5	50.0	47.5	43.5	40.0	34.5	36.0	50.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

- Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes when operating normally. Please consider to avoid location where quietness is required. For BC controller, it is recommended to be installed in places such as ceilings of corridor, rest rooms and plant rooms.

R2

• Cooling only

• Heating only

• Combination of cooling/heating operation (Cooling main or Heating main)

Outdoor temperature	Indoor temperature	
	Cooling	Heating
-10 to 21°CDB (14 to 70°FDB)	—	15 to 27°CDB (59 to 81°FDB)
-11 to 15.5°CWB (12.2 to 60°FWB)	15 to 24°CWB (59 to 75°FWB)	—

Section 8-1.

Shows an example of how to select the indoor and outdoor units according to the required heating/cooling load.

Section 8-2. through 8-6.

Show the actual correction data of indoor and outdoor units.

8-1. Selection of Cooling/Heating Units

<Cooling>

Design Condition	
Outdoor Design Dry Bulb Temperature	43 °C
Total Cooling Load	18.0 kW
Room1	
Indoor Design Dry Bulb Temperature	27 °C
Indoor Design Wet Bulb Temperature	20 °C
Cooling Load	8.0 kW
Room2	
Indoor Design Dry Bulb Temperature	24 °C
Indoor Design Wet Bulb Temperature	17 °C
Cooling Load	10.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

1. Cooling Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	9 kW (Rated)
Room2	PEFY-P100	11.2 kW (Rated)

(2) Total Indoor Units Capacity

$P80 + P100 = P180$

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	22.4 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Wet Bulb Temperature Correction (20°C)	1.04 (Refer to Fig.1)
Room2	Indoor Design Wet Bulb Temperature Correction (17°C)	0.95 (Refer to Fig.1)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 9.0 \times 1.04 + 11.2 \times 0.95$$

$$= 20.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Dry Bulb Temperature Correction (43°C)	0.94 (Refer to Fig.2)
Piping Length Correction (50 m)	0.94 (Refer to Fig.3)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction}$$

$$= 22.4 \times 0.94 \times 0.94$$

$$= 19.9 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

$CTi = 20.0 > CTo = 19.9$, thus, select CTo.

$CTx = CTo = 19.9 \text{ kW}$

(7) Comparison with Essential Load

Against the essential load 18.0kW, the maximum system capacity is 19.9kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

$CTx = CTo$, thus, calculate by the calculation below

Room1

$$\text{Maximum Capacity} \times \text{Room1 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (9.0 \times 1.04) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 9.3 \text{ kW} \quad \text{OK: fulfills the load 8.0kW}$$

Room2

$$\text{Maximum Capacity} \times \text{Room2 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (11.2 \times 0.95) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 10.6 \text{ kW} \quad \text{OK: fulfills the load 10.0kW}$$

Go on to the heating trial calculation since the selected units fulfill the cooling loads of Room 1, 2.

Fig.1 Indoor unit temperature correction
To be used to correct indoor unit only

Fig.2 Outdoor unit temperature correction
To be used to correct outdoor unit only

Fig.3 Correction of refrigerant piping length

<Heating>

Design Condition	
Outdoor Design Wet Bulb Temperature	-3 °C
Total Heating Load	20.5 kW
Room1	
Indoor Design Dry Bulb Temperature	21 °C
Heating Load	9.5 kW
Room2	
Indoor Design Dry Bulb Temperature	23 °C
Heating Load	11.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

2. Heating Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	10 kW (Rated)
Room2	PEFY-P100	12.5 kW (Rated)

(2) Total Indoor Units Capacity

P80 + P100 = P180

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	25.0 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Dry Bulb Temperature Correction (21°C)	0.97 (Refer to Fig.4)
Room2	Indoor Design Dry Bulb Temperature Correction (23°C)	0.90 (Refer to Fig.4)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 10.0 \times 0.97 + 12.5 \times 0.90$$

$$= 21.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Wet Bulb Temperature Correction (-3°C)	0.98 (Refer to Fig.5)
Piping Length Correction (50 m)	0.97 (Refer to Fig.6)
Defrost Correction	0.89 (Refer to Tbl.1)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Unit Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction} \times \text{Defrost Correction}$$

$$= 25.0 \times 0.98 \times 0.97 \times 0.89$$

$$= 21.1 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

CTi = 21.0 < CTo = 21.1, thus, select CTi.

CTx = CTi = 21.0 kW

(7) Comparison with Essential Load

Against the essential load 20.5kW, the maximum system capacity is 21.0kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

CTx = CTi, thus, calculate by the calculation below

Room1	Indoor Unit Rating × Indoor Design Temperature Correction	
	= 10.0 × 0.97	
	= 9.7 kW	OK: fulfills the load 9.5kW

Room2	Indoor Unit Rating × Indoor Design Temperature Correction	
	= 12.5 × 0.90	
	= 11.3 kW	OK: fulfills the load 11.0kW

Completed selecting units since the selected units fulfill the heating loads of Room 1, 2.

8-4. Correction by refrigerant piping length

CITY MULTI system can extend the piping flexibly within its limitation for the actual situation. However, a decrease of cooling/heating capacity could happen correspondently. Using following correction factor according to the equivalent length of the piping shown at 8-4-1 and 8-4-2, the capacity can be observed. 8-4-3 shows how to obtain the equivalent length of piping.

8-4-1. Cooling capacity correction

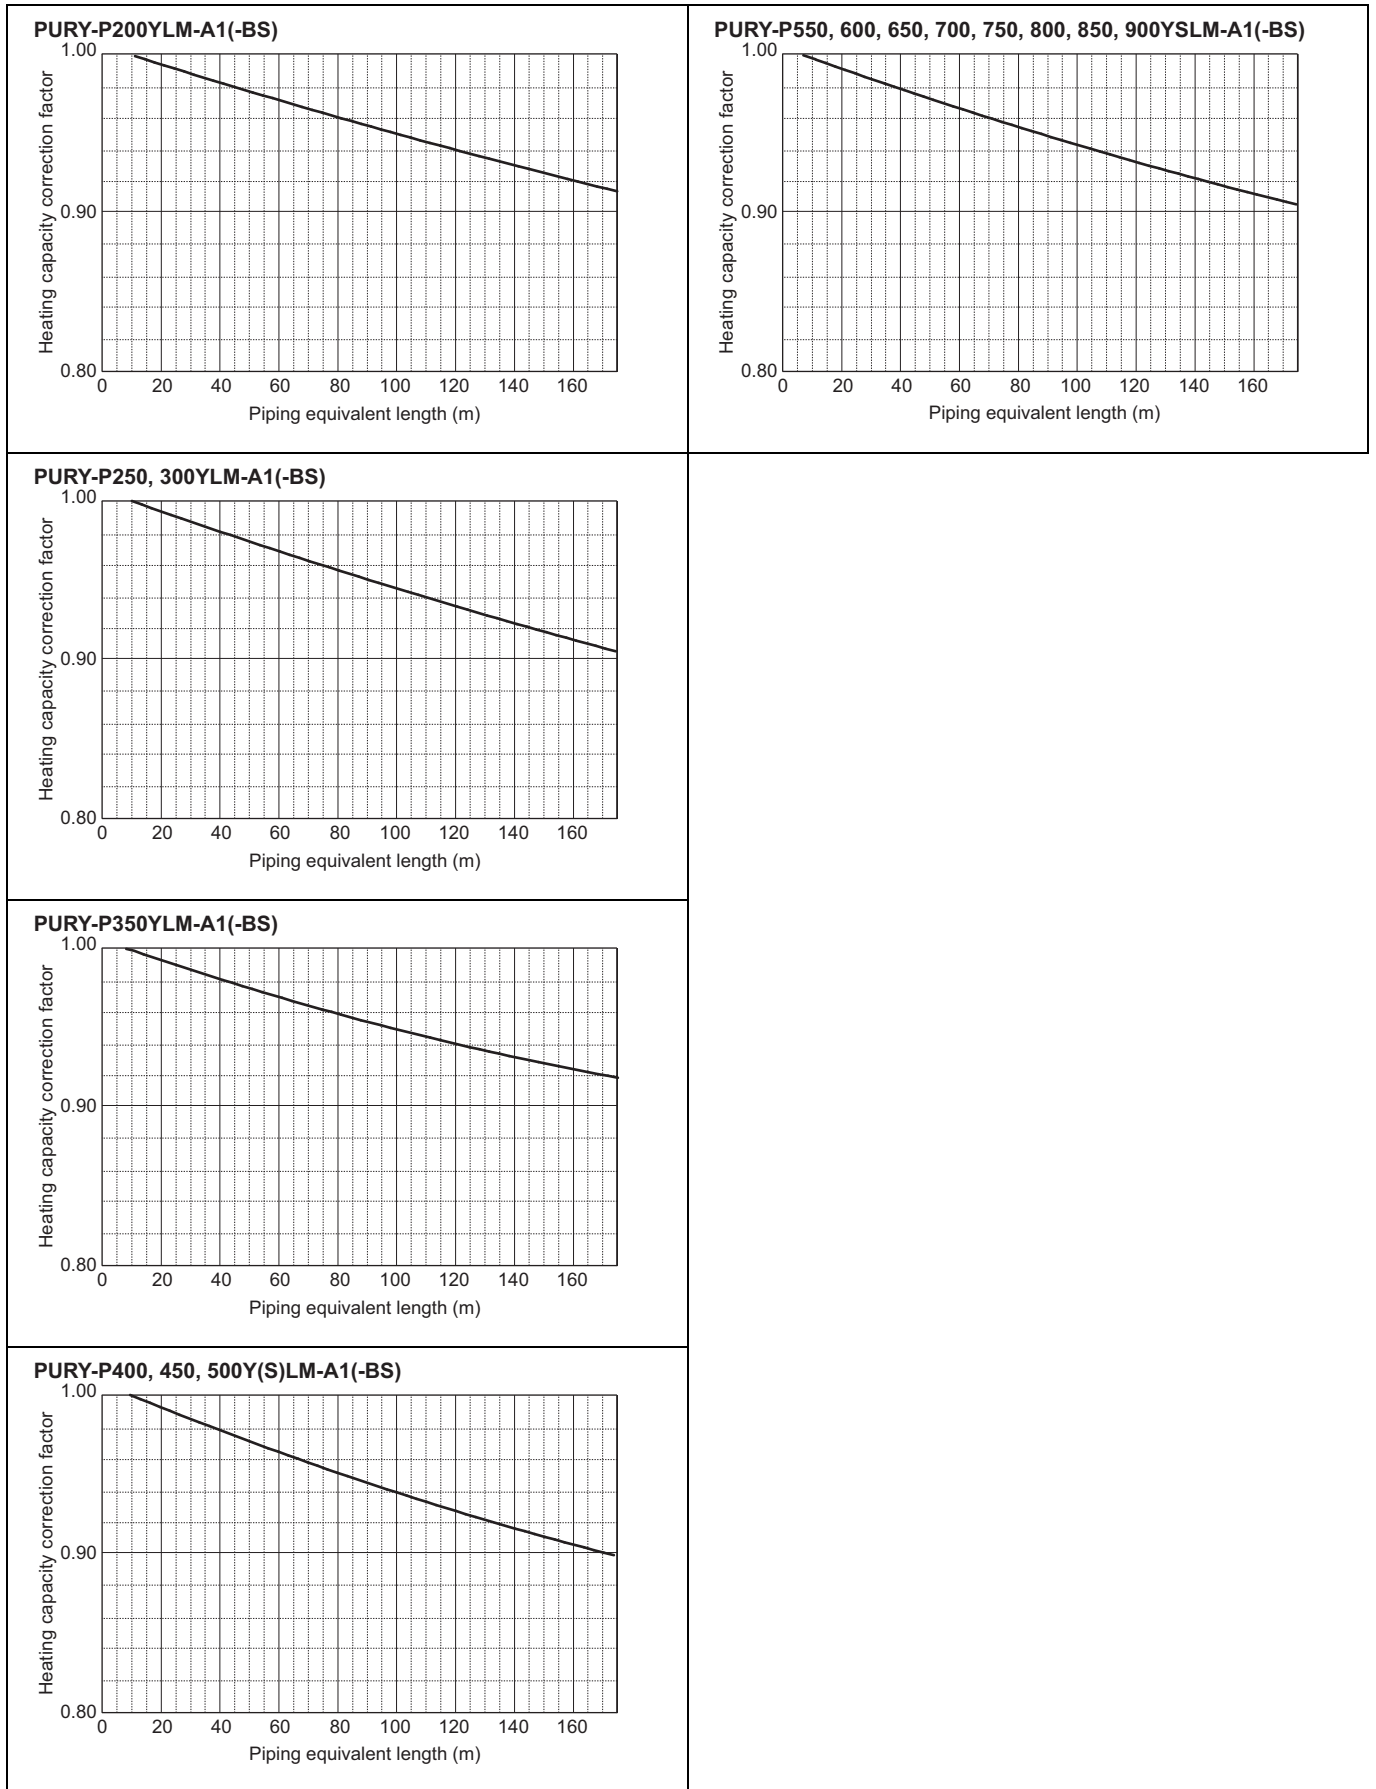

8. CAPACITY TABLES

R2

8-4-2. Heating capacity correction

R2

8-4-3. How to obtain the equivalent piping length

1 PURY-P200YLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.35 x number of bends in the piping) m

2 PURY-P250, 300YLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 x number of bends in the piping) m

3 PURY-P350YLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.47 x number of bends in the piping) m

4 PURY-P400, 450, 500, 550, 600, 650Y(S)LM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.50 x number of bends in the piping) m

5 PURY-P700, 750, 800YSLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.70 x number of bends in the piping) m

6 PURY-P850, 900YSLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.80 x number of bends in the piping) m

8-5. Correction by port counts of the BC controller

Indoor unit sizes P200 and P250 must be connected to 2 ports on the BC controller.

Indoor unit sizes from P100 to P140 should normally be connected to 2 ports on the BC controller (set BC controller DIP-SW 4-6 to its ON position).

In cases whereby indoor unit sizes from P100 to P140 or total capacity indoor units from P81 to P140 are connected to only 1port on the BC controller (set BC controller DIP-SW 4-6 to its OFF position), the cooling capacity of the indoor unit should be multiplied by a correction factor of **0.97**.

8-6. Correction at frost and defrost

Due to frost at the outdoor heat exchanger and the automatic defrost operation, the heating capacity of the outdoor unit can be calculated by multiplying the correction factor shown in the table below.

Table of correction factor at frosting and defrosting

Outdoor inlet air temp. °C	6	4	2	1	0	-2	-4	-6	-8	-10	-20

9-1. JOINT

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Three kinds of Joint sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Joint set for how to install the Joint set.

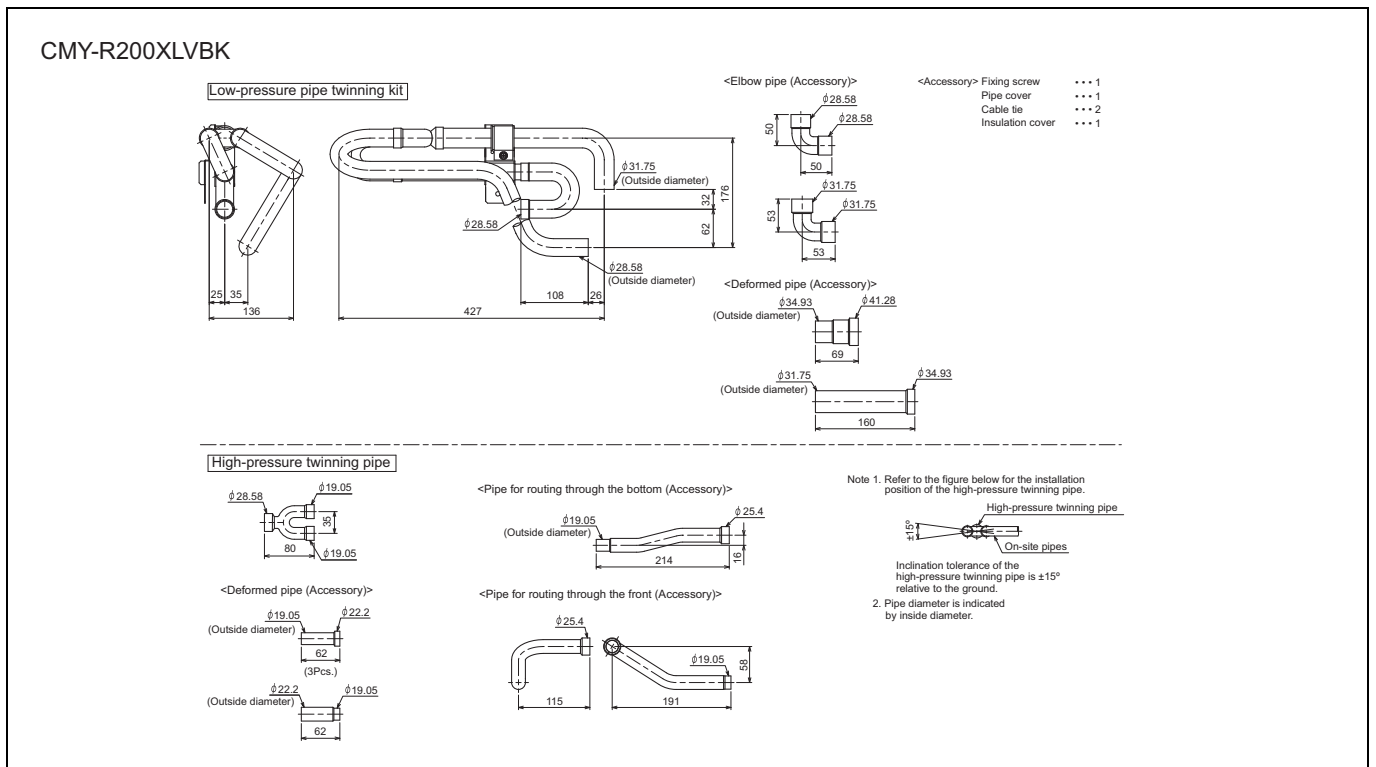

9-2. OUTDOOR TWINNING KIT

The following optional Outdoor Twinning Kit is needed to use to combine multiple refrigerant pipes. Refer to the chapter entitled System Design Section for the details of selecting a proper twinning kit.

2. Use the attached pipe to braze the port-opening of the distributor.
3. Pipe diameter is indicated by inside diameter.
4. Only use the Twinning pipe by Mitsubishi (optional parts).

Note 1. Refer to the figure below for the installation position of the twinning pipe.

Slope of the twinning pipe is at an angle within $\pm 15^\circ$ to the horizontal plane.

2. Use the attached pipe to braze the port-opening of the distributor.
3. Pipe diameter is indicated by inside diameter.
4. Only use the Twinning pipe by Mitsubishi (optional parts) .

9-3. JOINT KIT "CMY-R160-J1" FOR BC CONTROLLER

Joint kit "CMY-R160-J1" for BC controller is used to combine 2 ports of the BC controller at a PURY-(E)P-Y(S)LM-A1 system so as to enable down-stream Indoor capacity above P80 as shown in Fig. 1.

The Joint kit include following items:

① Instruction	② Joint pipe(Small)	③ Joint pipe(Large)	④ Cover 1	⑤ Cover 2	⑥ Cover 3	⑦ Band	⑧ Reducer 1	⑨ Reducer 2
This sheet 1pc	1pc	1pc	2pcs	1pc for gas side	1pc for liquid side	8pcs	OD19.05-ID22.2 1pc	OD19.05-ID15.88 1pc

Please prepare the following items in the field. ①Tape for insulation material sealing ②Extension pipe for refrigerant circuit

② Joint pipe (for liquid side)

③ Joint pipe (for gas side)

mm(in.)

1. Designing CMY-R160-J1 to a PURY-(E)P-Y(S)LM-A1 system

The maximum down-stream Indoor capacity for 1 port of BC controller is P80. When the down-stream Indoor capacity is above P80, Joint kit CMY-R160-J1 is needed to combined 2 ports of BC controller to enlarge the capacity, like Group 2 and 3 in Fig. 1.

Maximum 3 Indoor units are allowed to connect to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1.

When connecting Indoor units to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1 or CMY-Y102SS-G2 is applicable, like Group 1 and 2 in Fig. 1

Caution: Mixed cooling and heating mode at the same time for Indoor units connecting to 1 port or 2 combined ports is not available.

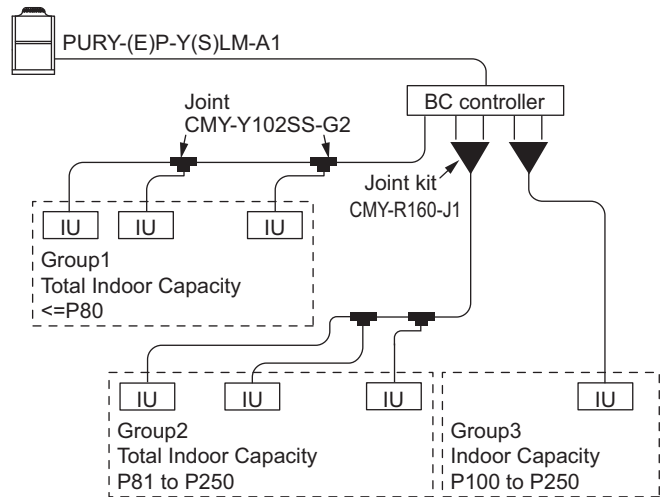

Fig.1. CMY-R160-J1 applying scheme

2. Piping at the installation site

The connection of CMY-R160-J1 to BC controller and pipe leading to Indoor units is referable to Fig. 2. Non-oxidized brazing is necessary. All piping must be careful to avoid foreign material getting inside.

After piping and air-tight testing, insulation work to the Joint and pipe should be done. Details is available at the Installation Manual.

Fig.2. Connecting CMY-R160-J1

9-4. RELAY BOX

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. PAC-BH02KTY-E is a relay box for controlling the electric base heater. For details, refer to the relay box Installation Manual.

R2

9-5. BASE HEATER

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. For details, refer to the base heater Installation Manual.

FAN	Type x Quantity		Propeller fan x 2		Propeller fan x 2	
	Air flow rate	m ³ /min	320		320	
		L/s	5,333		5,333	
		cfm	11,299		11,299	
	Control, Driving mechanism		Inverter-control, Direct-driven by motor		Inverter-control, Direct-driven by motor	
	*4	Motor output	kW	0.92 x 2		0.92 x 2
External static press.		0 Pa (0 mmH ₂ O)		0 Pa (0 mmH ₂ O)		
Compressor	Type x Quantity		Inverter scroll hermetic compressor		Inverter scroll hermetic compressor	
	Manufacture		AC&R Works, MITSUBISHI ELECTRIC CORPORATION		AC&R Works, MITSUBISHI ELECTRIC CORPORATION	
	Starting method		Inverter		Inverter	
	Motor output	kW	12.4		12.4	
	Case heater	kW	- (- V)		- (- V)	
	Lubricant		MEL32		MEL32	
External finish		Pre-coated galvanized steel sheets (+powder coating for -BS type) <MUNSELL 5Y 8/1 or similar>		Pre-coated galvanized steel sheets (+powder coating for -BS type) <MUNSELL 5Y 8/1 or similar>		
External dimension H x W x D		mm	1,710 (1,650 without legs) x 1,750 x 740		1,710 (1,650 without legs) x 1,750 x 740	
		in.	67-3/8 (65 without legs) x 68-15/16 x 29-3/16		67-3/8 (65 without legs) x 68-15/16 x 29-3/16	
Protection devices	High pressure protection		High pressure sensor, High pressure switch at 4.15 MPa (601 psi)		High pressure sensor, High pressure switch at 4.15 MPa (601 psi)	
	Inverter circuit (COMP./FAN)		Over-heat protection, Over-current protection		Over-heat protection, Over-current protection	
	Compressor		Over-heat protection		Over-heat protection	
	Fan motor		Over-current protection		Over-current protection	
Refrigerant	Type x original charge		R410A x 11.8 kg (27 lbs)		R410A x 11.8 kg (27 lbs)	
	Control		Indoor LEV and BC controller			
Net weight		kg (lbs)	336 (741)		336 (741)	
Heat exchanger		Salt-resistant cross fin & aluminium tube				
HIC circuit (HIC: Heat Inter-Changer)		-				
Pipe between unit and distributor	High pressure	mm (in.)	22.2 (7/8) Brazed		22.2 (7/8) Brazed	
	Low pressure	mm (in.)	28.58 (1-1/8) Brazed		-	
Defrosting method		Auto-defrost mode (Reversed refrigerant cycle, Hot gas)				
Drawing	External	WKJ94L370				
	Wiring	WKE94C949		WKE94C949		
Standard attachment	Document	Installation Manual				
	Accessory	Refrigerant conn. pipe				
Optional parts		Outdoor Twinning kit: CMY-ER200VBK Joint: CMY-Y102SS-G2, CMY-Y102LS-G2, CMY-R160-J1 Main BC controller: CMB-P1016V-HA1 Sub BC controller: CMB-P104, 108V-GB1, CMB-P1016V-HB1				
Remarks		Details on foundation work, duct work, insulation work, electrical wiring, power source switch, and other items shall be referred to the Installation Manual. Due to continuing improvement, above specifications may be subject to change without notice.				

Notes:	Unit converter
1. Nominal cooling conditions (subject to JIS B8615-1) Indoor: 27°C D.B./19°C W.B. (81°F D.B./66°F W.B.), Outdoor: 35°C D.B./24°C W.B. (95°F D.B./75°F W.B.) Pipe length: 7.5 m (24-9/16 ft.), Level difference: 0 m (0 ft.)	BTU/h = kW x 3,412 cfm = m ³ /min x 35.31 lbs = kg/0.4536
2. Nominal heating conditions (subject to JIS B8615-1) Indoor: 20°C D.B. (68°F D.B.), Outdoor: 7°C D.B./6°C W.B. (45°F D.B./43°F W.B.) Pipe length: 7.5 m (24-9/16 ft.), Level difference: 0 m (0 ft.)	
3. 5°C D.B. (23°F D.B.)/-6°C W.B. (21°F W.B.) to 21°C D.B. (70°F D.B.)/15.5°C W.B. (60°F W.B.) with cooling/heating mixed operation.	
4. External static pressure option is available (30 Pa, 60 Pa/3.1 mmH ₂ O, 6.1 mmH ₂ O).	*Above specification data is subject to rounding variation.

PURY-EP400, 450, 500YLM-A1 (-BS)

Unit : mm

1. Required space around the unit

● In case of single installation

- Secure enough space around the unit as shown in the figure below.
 - With a space of at least 300mm to the wall on the back of the unit

- When the height of the walls on the front, back or on the sides <H> exceeds the wall height limit as defined below, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.

<Wall height limit> Front: Up to the unit height
 Back: Up to 500mm from the unit bottom
 Side : Up to the unit height

2. Foundation work

- Take into consideration the surface strength, water drainage route, piping route, and wiring route when preparing the installation site.
 - Note that the drain water comes out of the unit during operation.
- Build the foundation in such way that the corner of the installation leg is securely supported as shown in the right figure. (Fig.A,B)
 - When using a rubber isolating cushion, please ensure it is large enough to cover the entire width of each of the unit's legs.
- The protrusion length of the anchor bolt must not exceed 30mm. (Fig.A,B)
- Use four fixing plates as shown in the right figure <field supply required> when using post-installed anchor bolts. (Fig.C,D)
- To prevent small animals and water and snow from entering the unit and damaging its parts, close the gap around the edges of through holes for pipes and wires with filler plates <field supply required>.
- When the pipes or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.
- Refer to the Installation Manual when installing units on an installation base.

● In case of collective installation

- When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and walkway between groups of units as shown in the figures below.
- At least two sides must be left open.
- As with the single installation, add the height that exceeds the height limit <h> to the figures that are marked with an asterisk.
- If there is a wall at both the front and the rear of the unit, install up to three units consecutively in the side direction and provide a space of 1000mm or more as inlet space/ passage space for each three units.

ZZ5	Function setting connector

♦ Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes when operating normally. Please consider to avoid location where quietness is required. For BC controller, it is recommended to be installed in places such as ceilings of corridor, rest rooms and plant rooms.

Low noise mode	50/60Hz	67.5	64.0	55.0	53.0	49.5	47.0	41.5	42.5	56.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PURY-EP800YSLM-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	75.0	72.0	67.5	64.0	58.5	53.5	49.0	44.0	65.5
Low noise mode	50/60Hz	67.5	64.0	55.0	53.0	49.5	47.0	41.5	42.5	56.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

Sound level of PURY-EP850YSLM-A1(-BS)

		63	125	250	500	1k	2k	4k	8k	dB(A)
Standard	50/60Hz	75.5	72.0	67.5	64.0	58.5	53.5	49.5	44.0	65.5
Low noise mode	50/60Hz	67.5	64.0	55.0	53.0	49.5	47.0	41.5	42.5	56.0

When Low noise mode is set, the A/C system's capacity is limited. The system could return to normal operation from Low noise mode automatically in the case that the operation condition is severe.

- Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes when operating normally. Please consider to avoid location where quietness is required. For BC controller, it is recommended to be installed in places such as ceilings of corridor, rest rooms and plant rooms.

[PURY-EP200-500YLM, PURY-EP550-900YSLM]

Measurement condition

Measurement frequency: 1 Hz-80 Hz

Measurement point: Ground surface 20 cm away from the unit leg

Installation condition: Direct installation on the concrete floor

Power source: 3-phase 4-wire 380-400-415 V 50/60 Hz

Operation condition: JIS condition (cooling, heating)

Measurement device: Vibration level meter for vibration pollution VM-1220C (JIS-compliant product)

R2 (HIGH COP)

Section 8-1.

Shows an example of how to select the indoor and outdoor units according to the required heating/cooling load.

Section 8-2. through 8-6.

Show the actual correction data of indoor and outdoor units.

8-1. Selection of Cooling/Heating Units

<Cooling>

Design Condition	
Outdoor Design Dry Bulb Temperature	43 °C
Total Cooling Load	18.0 kW
Room1	
Indoor Design Dry Bulb Temperature	27 °C
Indoor Design Wet Bulb Temperature	20 °C
Cooling Load	8.0 kW
Room2	
Indoor Design Dry Bulb Temperature	24 °C
Indoor Design Wet Bulb Temperature	17 °C
Cooling Load	10.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

1. Cooling Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	9 kW (Rated)
Room2	PEFY-P100	11.2 kW (Rated)

(2) Total Indoor Units Capacity

$P80 + P100 = P180$

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	22.4 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Wet Bulb Temperature Correction (20°C)	1.04 (Refer to Fig.1)
Room2	Indoor Design Wet Bulb Temperature Correction (17°C)	0.95 (Refer to Fig.1)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 9.0 \times 1.04 + 11.2 \times 0.95$$

$$= 20.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Dry Bulb Temperature Correction (43°C)	0.94 (Refer to Fig.2)
Piping Length Correction (50 m)	0.94 (Refer to Fig.3)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction}$$

$$= 22.4 \times 0.94 \times 0.94$$

$$= 19.9 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

$CTi = 20.0 > CTo = 19.9$, thus, select CTo.

$CTx = CTo = 19.9 \text{ kW}$

(7) Comparison with Essential Load

Against the essential load 18.0kW, the maximum system capacity is 19.9kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

$CTx = CTo$, thus, calculate by the calculation below

Room1

$$\text{Maximum Capacity} \times \text{Room1 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (9.0 \times 1.04) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 9.3 \text{ kW} \quad \text{OK: fulfills the load 8.0kW}$$

Room2

$$\text{Maximum Capacity} \times \text{Room2 Capacity after the Temperature Correction} / (\text{Room1,2 Total Capacity after the Temperature Correction})$$

$$= 19.9 \times (11.2 \times 0.95) / (9.0 \times 1.04 + 11.2 \times 0.95)$$

$$= 10.6 \text{ kW} \quad \text{OK: fulfills the load 10.0kW}$$

Go on to the heating trial calculation since the selected units fulfill the cooling loads of Room 1, 2.

Fig.1 Indoor unit temperature correction
To be used to correct indoor unit only

Fig.2 Outdoor unit temperature correction
To be used to correct outdoor unit only

Fig.3 Correction of refrigerant piping length

<Heating>

Design Condition	
Outdoor Design Wet Bulb Temperature	-3 °C
Total Heating Load	20.5 kW
Room1	
Indoor Design Dry Bulb Temperature	21 °C
Heating Load	9.5 kW
Room2	
Indoor Design Dry Bulb Temperature	23 °C
Heating Load	11.0 kW
<Other>	
Indoor/Outdoor Equivalent Piping Length	50 m

2. Heating Calculation

(1) Temporary Selection of Indoor Units

Room1	PEFY-P80	10 kW (Rated)
Room2	PEFY-P100	12.5 kW (Rated)

(2) Total Indoor Units Capacity

P80 + P100 = P180

(3) Selection of Outdoor Unit

The P200 outdoor unit is selected as total indoor units capacity is P180

PUHY-P200	25.0 kW
-----------	---------

(4) Total Indoor Units Capacity Correction Calculation

Room1	Indoor Design Dry Bulb Temperature Correction (21°C)	0.97 (Refer to Fig.4)
Room2	Indoor Design Dry Bulb Temperature Correction (23°C)	0.90 (Refer to Fig.4)

Total Indoor Units Capacity (CTi)

$$CTi = \sum (\text{Indoor Unit Rating} \times \text{Indoor Design Temperature Correction})$$

$$= 10.0 \times 0.97 + 12.5 \times 0.90$$

$$= 21.0 \text{ kW}$$

(5) Outdoor Unit Correction Calculation

Outdoor Design Wet Bulb Temperature Correction (-3°C)	0.98 (Refer to Fig.5)
Piping Length Correction (50 m)	0.97 (Refer to Fig.6)
Defrost Correction	0.89 (Refer to Tbl.1)

Total Outdoor Unit Capacity (CTo)

$$CTo = \text{Outdoor Unit Rating} \times \text{Outdoor Design Temperature Correction} \times \text{Piping Length Correction} \times \text{Defrost Correction}$$

$$= 25.0 \times 0.98 \times 0.97 \times 0.89$$

$$= 21.1 \text{ kW}$$

(6) Determination of Maximum System Capacity (CTx)

Comparison of Capacity between Total Indoor Units Capacity (CTi) and Total Outdoor Unit Capacity (CTo)

CTi = 21.0 < CTo = 21.1, thus, select CTi.

CTx = CTi = 21.0 kW

(7) Comparison with Essential Load

Against the essential load 20.5kW, the maximum system capacity is 21.0kW: Proper outdoor units have been selected.

(8) Calculation of Maximum Indoor Unit Capacity of Each Room

CTx = CTi, thus, calculate by the calculation below

Room1	Indoor Unit Rating × Indoor Design Temperature Correction	10.0 × 0.97	OK: fulfills the load 9.5kW
		= 9.7 kW	

Room2	Indoor Unit Rating × Indoor Design Temperature Correction	12.5 × 0.90	OK: fulfills the load 11.0kW
		= 11.3 kW	

Completed selecting units since the selected units fulfill the heating loads of Room 1, 2.

R2 (HIGH COP)

8-4. Correction by refrigerant piping length

CITY MULTI system can extend the piping flexibly within its limitation for the actual situation. However, a decrease of cooling/heating capacity could happen correspondently. Using following correction factor according to the equivalent length of the piping shown at 8-4-1 and 8-4-2, the capacity can be observed. 8-4-3 shows how to obtain the equivalent length of piping.

8-4-1. Cooling capacity correction

R2 (HIGH COP)

8. CAPACITY TABLES

R2 (HIGH COP)

8-4-2. Heating capacity correction

R2 (HIGH COP)

8-4-3. How to obtain the equivalent piping length**1 PURY-EP200YLM-A1(-BS)**

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.35 × number of bends in the piping) m

2 PURY-EP250, 300YLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.42 × number of bends in the piping) m

3 PURY-EP350YLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.47 × number of bends in the piping) m

4 PURY-EP400, 450, 500YLM-A1(-BS), EP550, 600, 650YSLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.50 × number of bends in the piping) m

5 PURY-EP700YSLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.70 × number of bends in the piping) m

6 PURY-P850, 900YSLM-A1(-BS)

Equivalent length = (Actual piping length to the farthest indoor unit) + (0.80 × number of bends in the piping) m

8-5. Correction by port counts of the BC controller

Indoor unit sizes P200 and P250 must be connected to 2 ports on the BC controller.

Indoor unit sizes from P100 to P140 should normally be connected to 2 ports on the BC controller (set BC controller DIP-SW 4-6 to its ON position).

In cases whereby indoor unit sizes from P100 to P140 or total capacity indoor units from P81 to P140 are connected to only 1 port on the BC controller (set BC controller DIP-SW 4-6 to its OFF position), the cooling capacity of the indoor unit should be multiplied by a correction factor of **0.97**.

8-6. Correction at frost and defrost

Due to frost at the outdoor heat exchanger and the automatic defrost operation, the heating capacity of the outdoor unit can be calculated by multiplying the correction factor shown in the table below.

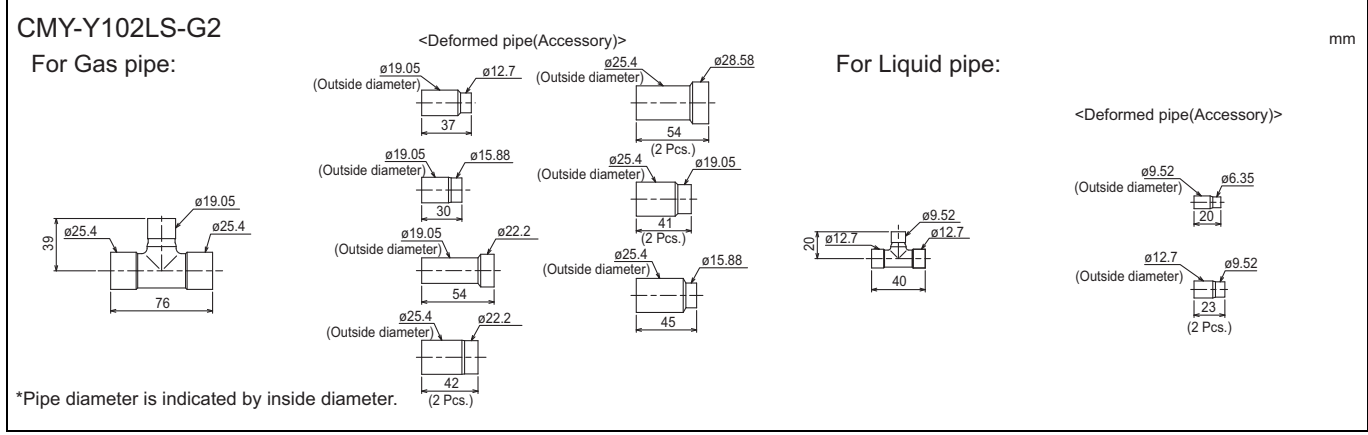

Table of correction factor at frosting and defrosting

Outdoor inlet air temp. °C	6	4	2	1	0	-2	-4	-6	-8	-10	-20
Outdoor inlet air temp. °F	43	39	36	34	32	28	25	21	18	14	-4

9-1. JOINT

CITY MULTI units can be easily connected by using Joint sets and Header sets provided by Mitsubishi Electric. Three kinds of Joint sets are available for use. Refer to section 3 in "System Design" or the Installation Manual that comes with the Joint set for how to install the Joint set.

R2 (HIGH COP)

9-2. OUTDOOR TWINNING KIT

The following optional Outdoor Twinning Kit is needed to use to combine multiple refrigerant pipes. Refer to the chapter entitled System Design Section for the details of selecting a proper twinning kit.

Note 1. Refer to the figure below for the installation position of the twinning pipe.

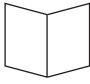

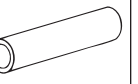

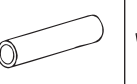

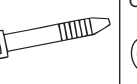

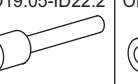

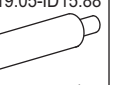

Slope of the twinning pipe is at an angle within $\pm 15^\circ$ to the horizontal plane.

2. Use the attached pipe to braze the port-opening of the distributor.
3. Pipe diameter is indicated by inside diameter.
4. Only use the Twinning pipe by Mitsubishi (optional parts) .

9-3. JOINT KIT CMY-R160-J1 FOR BC CONTROLLER

Joint kit "CMY-R160-J1" for BC controller is used to combine 2 ports of the BC controller at a PURY-(E)P-Y(S)LM-A1 system so as to enable down-stream Indoor capacity above P80 as shown in Fig. 1.

The Joint kit include following items:

① Instruction	② Joint pipe(Small)	③ Joint pipe(Large)	④ Cover 1	⑤ Cover 2	⑥ Cover 3	⑦ Band	⑧ Reducer 1	⑨ Reducer 2
								
This sheet 1pc	1pc	1pc	2pcs	1pc for gas side	1pc for liquid side	8pcs	OD19.05-ID22.2 1pc	OD19.05-ID15.88 1pc

Please prepare the following items in the field. ①Tape for insulation material sealing ②Extension pipe for refrigerant circuit

② Joint pipe (for liquid side)

③ Joint pipe (for gas side)

mm(in.)

1. Designing CMY-R160-J1 to a PURY-(E)P-Y(S)LM-A1 system

The maximum down-stream Indoor capacity for 1 port of BC controller is P80. When the down-stream Indoor capacity is above P80, Joint kit CMY-R160-J1 is needed to combined 2 ports of BC controller to enlarge the capacity, like Group 2 and 3 in Fig. 1.

Maximum 3 Indoor units are allowed to connect to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1.

When connecting Indoor units to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1 or CMY-Y102SS-G2 is applicable, like Group 1 and 2 in Fig. 1

Caution: Mixed cooling and heating mode at the same time for Indoor units connecting to 1 port or 2 combined ports is not available.

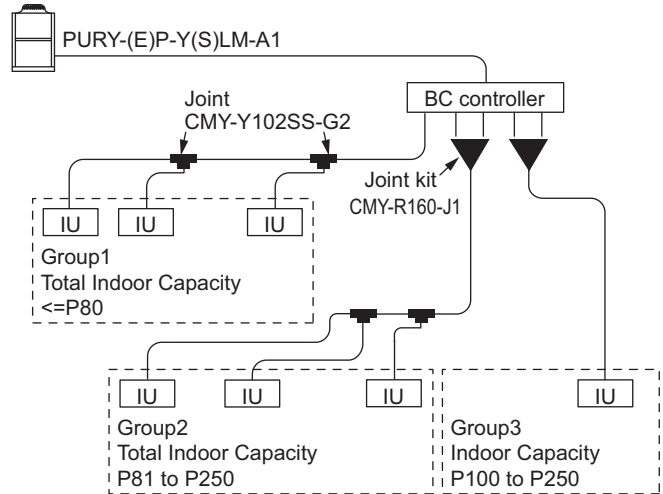

Fig.1. CMY-R160-J1 applying scheme

2. Piping at the installation site

The connection of CMY-R160-J1 to BC controller and pipe leading to Indoor units is referable to Fig. 2. Non-oxidized brazing is necessary. All piping must be careful to avoid foreign material getting inside.

After piping and air-tight testing, insulation work to the Joint and pipe should be done. Details is available at the Installation Manual.

Fig.2. Connecting CMY-R160-J1

9-4. RELAY BOX

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. PAC-BH02KTY-E is a relay box for controlling the electric base heater. For details, refer to the relay box Installation Manual.

R2 (HIGH COP)

9-5. BASE HEATER

If there is a risk that the drain water will freeze inside the outdoor unit, the installation of a base heater is recommended. For details, refer to the base heater Installation Manual.

System Controller

MITSUBISHI ELECTRIC's Air-conditioner Network System (MELANS) leads air conditioner management a PC browser and Network era.

*Some controllers cannot be used in combination with certain models of devices.

2-1. MA remote controller [PAR-31MAA]

Dual Set Point

■ Functions

1. Operation/Display

○:Each group X:Not available

Item	Description	Setting	Display
ON/OFF	Switches between ON and OFF.	○	○
Operation mode switching	Switches among Cool/Dry/Fan/Auto/Heat.	○	○
Room temp. setting *3	The temperature can be set within the following range. Cool/Dry : 19°C - 30°C (14°C - 30°C) / 67°F - 87°F (57°F - 87°F) Heat : 17°C - 28°C (17°C - 28°C) / 63°F - 83°F (63°F - 83°F) Auto : 19°C - 28°C (17°C - 28°C) / 67°F - 83°F (63°F - 83°F) () For PEFY/PPFY by setting DipSW 7-1 to ON and limits to N16H fan speed only. * Range of temperature settings vary depending on model.	○	○
Fan speed setting	Changes fan speed. * Available fan speeds vary depending on the model.	○	○
Air flow direction setting	Changes airflow direction. * Available airflow directions vary depending on the model.	○	○
Louver setting	Switches between louver ON/OFF.	○	○
Ventilation equipment control	Interlocked setting and interlocked operation setting with the City Multi LOSSNAY units can be made. The Stop/Low/High settings of the ventilation equipment can be controlled.	○	○
Auto descending panel *1	Raises and lowers the automatic elevating panel.	○	○
backlight	Pressing any button turns the backlight on and it will stay lit for a certain period of time depending on the screen.	X	○
Main display mode setting	The Main display can be displayed in two different modes: "Full" and "Basic."	○	○
Clock *2	Date (year/month/day) and time (hour/minute) can be set. The set time as well as the day of the week will be displayed on the Main display. It is also possible to set not to display the time on the Main display.	○	○
Clock display	The clock can be displayed in 12-hour format (AM/PM before or after the time) and 24-hour format.	○	○
Room temp. display *3	Displays the room temperature on the Main display in the "Full" mode during operation.	-	○
Error information	When an error occurs, an error code and the unit address appear. Air conditioning unit model, serial number, and contact number can be set to appear when an error occurs. (The information above needs to be entered in advance.) * An error code may not appear depending on the error.	-	○
Filter information	A filter sign will appear when it is time to clean the filter.	-	○

● Backlit LCD

● Can be set and shown by 0.5°C degree.

■ External dimension

2. Schedule and timer setting

○:Each group X:Not available

Item	Description	Setting	Display
Timer	ON/OFF timer Turns ON and OFF daily at a set time. • Time can be set in 5-minute increments. • It is also possible to set the ON time only or the OFF time only. Auto-OFF timer Turns off the unit after a certain period of operation. • Operation time can be set to a value from 30 to 240 minutes in 10-minute increments.	○	○
Weekly timer	Weekly ON/OFF times and set temperatures can be set. • Time can be set in 5-minute increments. Up to 8 schedule patterns can be set per day of the week. * Not valid when the ON/OFF timer is set.	○	○
Night setback	The temperature range and the start/stop times can be set.	○	○

3. Restriction settings

○:Each group X:Not available

Item	Description	Setting	Display
Allows/disallows local operation	The following operation can be prohibited by making certain settings on the centralized controller: ON/OFF, operation mode setting, temperature setting, and filter sign reset. * While an operation is prohibited, the operation icon lights up (only on the Main display in the "Full" mode).	X	○
Operation lock	The following operation can be prohibited respectively: ON/OFF, operation mode setting, temperature setting, and airflow direction setting.	○	○
Temperature range restriction	The room temperature range for each operation mode can be restricted.	○	○
Auto return	The units operate at the preset temperature after a designated period. (Time can be set to a value from 30 to 120 in 10-minute increments.) * Not valid when the temperature setting range is restricted.	○	X
password	Administrator password (required for schedule setting etc.) and Maintenance password (required for test run and function setting etc.) can be set.	○	X

4. Miscellaneous items

○:Each group X:Not available

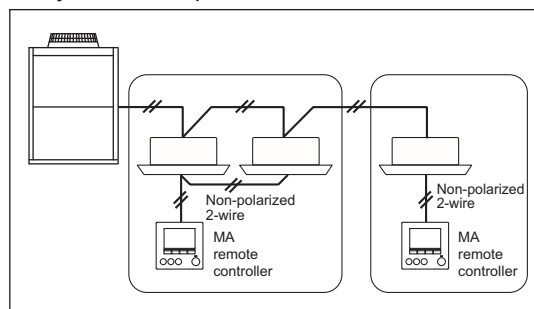

Item	Description	Setting	Display
Language Selection	Select the display language from the following 8 languages. English, French, German, Spanish, Italian, Portuguese, Swedish, and Russian	○	○
Contrast	Adjusts LCD contrast.	○	○
Manual vane Angle *1	Fixes the vane position for each air outlet.	○	X
Service *1	Contains Test run, Function setting, Refrigerant volume check, Refrigerant leak check, Smooth maintenance, Request code, and Error history.	○	○

*1 This function is active only for the units that support the function.

*2 The clock is accurate within 50 seconds per month (at the temperature of 25°C [77°F]). The clock is backed up for 7 days.

*3 Temperature will be displayed either in Centigrade in 0.5- or 1-degree increments, or in Fahrenheit, depending on the indoor unit model and the display mode setting on the remote controller.

■ System example

*When a PAR-31MAA is connected to a group, no other MA remote controllers can be connected to the same group.

2-2. ME remote controller [PAR-U02MEDA]

- ME remote controller is a remote controller designed to control Mitsubishi Electric's air conditioning units and also allows for the control of other manufacturer's products connected via Mitsubishi Electric's AHC (Advanced HVAC CONTROLLER).
 - It can control up to sixteen indoor units and one AHC.
 - ME remote controller features such basic functions as operations and monitoring of air conditioning units and schedule-control functions and is equipped with four built-in sensors (temperature, humidity, occupancy, brightness), which enable an integrated control of the system, including the humidifiers and ventilation units connected to the system via AHC, to help create a comfortable environment.
- When the built-in occupancy/fan/sensor detects vacancy in a specific zone, the controller uses its internal function to reduce energy-consumption.

Functions

1. Operation/Display

○:Each group X:Not available

Item	Description	Setting	Display
ON/OFF	Switches between ON and OFF.	○	○
Operation mode switching	Switches among Cool/Dry/Fan/Auto/Heat. *Available operation mode varies depending on the model.	○	○
Room temp. setting	The temperature can be set within the following range. Cool/Dry: 19°C - 35°C/67°F - 95°F Heat: 4.5°C - 28°C/40°F - 83°F Auto (single set point): 19°C - 28°C/67°F - 83°F Auto (dual set points) [Cool] Same as the set temp. range for Cool mode. [Heat] Same as the set temp. range for Heat mode. * Set temperature range varies depending on the model.	○	○
Fan speed setting	Changes fan speed. * Available fan speeds vary depending on the model.	○	○
Air flow direction setting	Changes airflow direction. * Available airflow directions vary depending on the model.	○	○
Louver setting	Switches between louver ON/OFF. * Available Louver setting vary depending on the model.	○	○
Ventilation equipment control	Interlocked setting and interlocked operation setting with the City Multi LOSSNAY units can be made. The Stop/Low/High settings of the ventilation equipment can be controlled.	○	○
Backlight	Touching the screen turns the backlight on. It will stay lit for the amount of time that was specified on the MENU screen.	○	○
Clock display	Date (year/month/day) and time (hour/minute) can be set. The set time as well as the day of the week will be displayed on the Home display. The clock can be displayed in 12-hour format (AM/PM before or after the time) and 24-hour format.	○	○
Daylight saving	Sets the daylight saving time period.	○	○
Room temp. / humidity display	Displays the room temperature and humidity on the Home display.	—	○
Error information	When an error occurs, an error code and the unit address appear. Contact number can be set to appear when an error occurs. (The information above needs to be entered on the Service menu.)	—	○
Filter information	A filter sign will appear when it is time to clean the filter.	—	○

2. Schedule and timer setting

○:Each group X:Not available

Item	Description	Setting	Display
Schedule (Weekly timer)	Weekly ON/OFF times, operation mode, and set temperatures can be set. • Time can be set in 5-minute increments. Up to 8 schedule patterns can be set per day of the week. * Not valid when the ON/OFF timer is set.	○	○
Timer	ON/OFF timer Turns ON and OFF daily at a set time. • Time can be set in 5-minute increments. • It is also possible to set the ON time only or the OFF time only. Auto-OFF timer Turns off the unit after a certain period of operation. • Operation time can be set to a value from 30 to 240 in 10-minute increments.	○	○
Night setback	The temperature range and the start/stop times can be set.	○	○

3. Energy-save control assist function

○:Each group X:Not available

Item	Description	Setting	Display
Energy-save control during vacancy	When vacancy is detected by the occupancy sensor, the energy-save control assist function is activated. Four control types are available for selection: ON/OFF/Set temperature/Fan speed/Thermo-off. The brightness sensor can be used in conjunction with the occupancy sensor to detect the occupancy/vacancy status more accurately.	○	○

4. Restriction settings

○:Each group X:Not available

Item	Description	Setting	Display
Allows/disallows local operation	The following operation can be prohibited by making certain settings on the centralized controller: ON/OFF, operation mode setting, temperature setting, fan speed, air direction, and filter sign reset. * While an operation is prohibited, the operation icon lights up.	X	○
Operation lock	The following operation can be prohibited respectively: ON/OFF, operation mode setting, temperature setting, and airflow direction setting.	○	○
Temperature range restriction	The room temperature range for each operation mode can be restricted.	○	○
Auto return	The units operate at the preset temperature after a designated period. (Time can be set to a value from 10 to 120 in 10-minute increments.) * Not valid when the temperature setting range is restricted.	○	X
Password	User password (required for schedule setting etc.) and Service password (required for test run and function setting etc.) can be set.	○	X

5. AHC control functions

○:Each group X:Not available

Item	Description	Setting	Display
Status monitor	Displays the status of general equipments connected to the AHC.	X	○
Humidity setting	Sets the humidity level in 1% increments for the humidifier connected to the AHC, if any.	○	○

Vane setting	Switches the vane directions. *The settable vane direction varies depending on the indoor unit model to be connected.	○	○
Ventilation equipment control	When the CITY MULTI indoor unit is connected, interlocked setting of the CITY MULTI LOSSNAY unit is possible. When the Mr. SLIM indoor unit (A-control) is connected, interlocked operation of the microcomputer-type LOSSNAY unit is possible.	○	○
Backlight	Pressing the button lights up a backlight. The light automatically turns off after a certain period of time. (The brightness settings can be selected from Bright, Dark, and Light off.)	○	○
Error information	Displays the current error status with the address. *The address may not be displayed depending on the error status.	—	○
Allows/disallows local operation	By setting a centralized controller, the following local operations are prohibited: ON/OFF; operation mode; preset temperature; *The CENTRAL icon appears while the local operations are prohibited.	×	○
Operation lock	Locks all buttons.	○	○
Temperature range restriction	The preset temperature range can be restricted for each operation mode (COOL/HEAT/AUTO).	○	○
Room temperature detection	The temperature sensor is built-in on the remote controller.	—	—
Various settings	The following settings can be made by setting the dip switches. • Remote controller Main/Sub setting • Temperature display unit setting (Celsius/Fahrenheit) • Cooling/heating display in AUTO mode • Indoor temperature display	—	—

- Control: ON/OFF, room temperature, vane, fan speed, and operation mode
- The only wiring required is cross-over wiring based on two-wire signal lines.
- Room temperature sensors are built-in.
- Set temperature range limit
- Can operate all types of indoor units
- * : Since this controller has limited functions, it should always be used in conjunction with standard controller or centralized controller.
- Backlit LCD
- Flat back

■ System example

*1 AUTO mode is settable only when those functions are available on the indoor unit.

■ External dimension

2-4. Wireless remote controller[PAR-FL32MA/PAR-FA32MA/PAR-SA9FA/PAR-SL94B-E]

- It can operate in a group system without requiring address settings.
- When operating, it displays LED lamps. When errors occur, the error code can be shown by the LED flash count.
- *: If an indoor unit with different functionality is operating inside the same group, please note there may be cases when functionality is partially disabled for batch control.
- *: Wireless remote controllers can only be used for a single refrigerant system.
- *: If you use a system controller to centrally control a group, you will need cross-wiring between indoor units when using a wireless remote controller.
Also ensure there is no difference between the group setting of the main system controller and the cross wiring across indoor units when wiring and setting cross wires.

External dimension

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for a single group	○	○
Operation mode switching	Switches between Cool / Dry / Fan / Heat / Auto.* Operation modes vary depending on the air conditioner unit. *Auto only supported for the City Multi R2 and WR2 series.	○	○
Temperature setting	Sets the temperature for a single group Range of temperature setting Cool/Dry : 19°C - 30°C (14°C - 30°C) / 67°F - 87°F (57°F - 87°F) Heat : 17°C - 28°C (17°C - 28°C) / 63°F - 83°F (63°F - 83°F) Auto : 19°C - 28°C (17°C - 28°C) / 67°F - 83°F (63°F - 83°F) () For PEFY/PFFY by setting DipSW 7-1 to ON and limits to NIGH fan speed only. * Set to PAR-FL32MA according to its Installation Manual 4 "Model setting".	○	○
Fan speed setting	Models with 4 air flow speed settings: Hi/Mid-1/Mid-2/Low Models with 3 air flow speed settings: Hi/Mid/Low Models with 2 air flow speed settings: Hi/Low Auto setting varies depending on the model.	*	*
Air flow direction setting	Air flow direction angles (4-angle, Swing) Auto Louver ON/OFF. Air flow direction settings vary depending on the model.	*	*
Timer operation	One ON/OFF setting can be set for one day.	○	○
Permit / Prohibit local operation	Individually prohibit operation of each local remote control function (ON/OFF, Change operation mode, Set temperature, Reset filter). *:1: If operation is performed when the local remote controller inactivation command is received from the main system controller, a buzzer will ring and an LED will flash.	X	*1 ○
Indoor unit intake temperature	Measures the intake temperature of the indoor unit when the indoor unit is operating.	X	X
Error	When an error occurs on the air conditioner unit, the operation lamp on the signal receiving unit will flash.	X	○
Test run	This operates air conditioner units in test run mode.	○	○
Ventilation equipment	Up to 16 indoor units can be connected to an interlocked system that has one LOSSNAY.	X	X

* Some models will have different display for the air flow direction and fan speed.
Set the air flow direction and fan speed when performing initial setting.

System example

2-5. LOSSNAY remote controller for LGH-RVX-E [PZ-61DR-E]

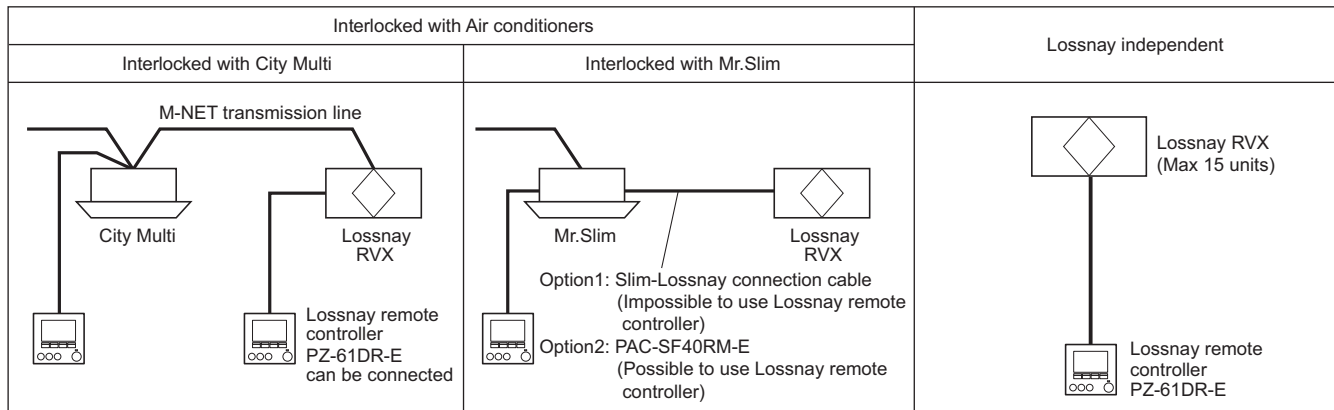

■ Functions

Function (Communicating mode)	PZ-61DR-E
Fan speed selection	4 fan speeds
Ventilation mode selection	Energy recovery/Bypass/Auto
Night-purge (time)	Any time selectable
Night-purge (fan speed)	Selectable from 4 fan speeds
Dip-switch setting and function setting from RC	Yes
Bypass temp. free setting	Yes
Heater-On temp. free setting	Yes
Fan power up after installation	Yes
0 - 10VDC external input	Yes
ON/OFF timer	Yes
Auto-Off timer	Yes
Weekly timer	Yes
Operation restrictions (ON/OFF, Ventilation mode, fan speed)	Yes
Operation restrictions (Fan speed skip setting)	Yes
Screen contrast adjustment	Yes
Language selection	Yes (8 languages)
Initializing remote controller	Yes
Filter cleaning sign	Yes
Lossnay core cleaning sign	Yes
Error indication	Yes
Error history	Yes
OA/RA/SA temp. display	Yes

- Stand-alone LOSSNAY operation is possible by commands from a centralized controller or LOSSNAY remote controller.
(AE-200E/AE-50E/EW-50E/AG-150A/AT-50B are centralized controllers that support LOSSNAY operation.)
- The LOSSNAY remote controller is capable of changing the air flow and vent modes.
- All the wiring is cross-wiring that uses non-polar two wire system signal cables.
 - * It is possible to use a LOSSNAY remote controller for LOSSNAY unit that is interlocked with other indoor units.
 - * It is not possible to connect to LGH-RX5-E.

■ System example

■ External dimension

2-6. LOSSNAY remote controller for LGH-RVX-E [PZ-43SMF-E]

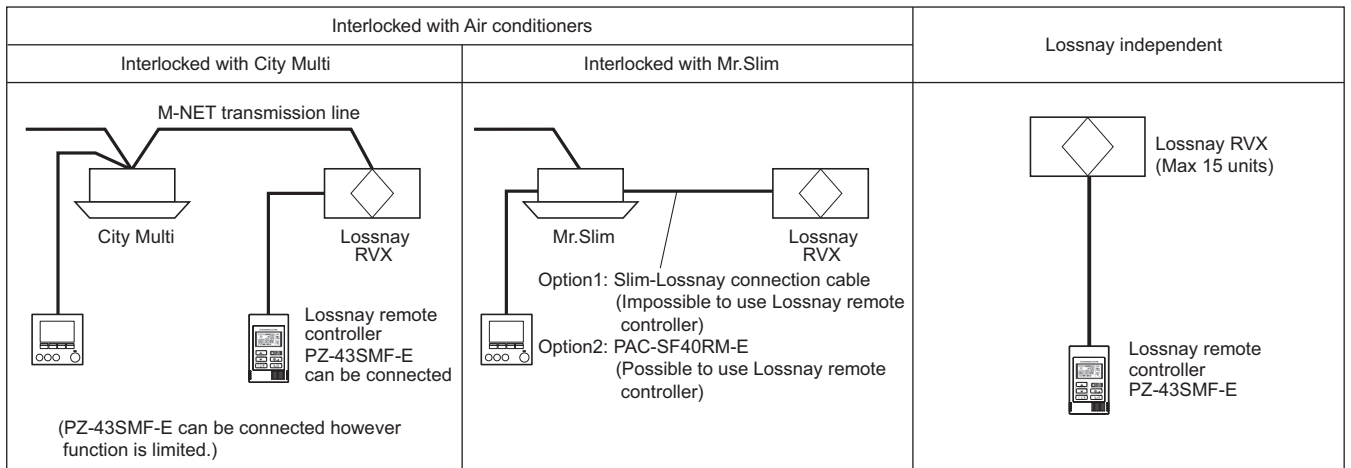

- Stand-alone LOSSNAY operation is possible by commands from a centralized controller or LOSSNAY remote controller. (AE-200E/AE-50E/EW-50E/AG-150A/AT-50B are centralized controllers that support LOSSNAY operation.)
- The LOSSNAY remote controller is capable of changing the air flow and vent modes.
- All the wiring is cross-wiring that uses non-polar two wire system signal cables.

* It is possible to use a LOSSNAY remote controller for LOSSNAY unit that is interlocked with other indoor units.

■ Functions

Operation	Relevant button	Relevant display items	Sequence
Starting the Lossnay unit			Press the "ON/OFF" button and check that the operation lamp turns on.
Setting the Ventilation mode			Press the "Ventilation mode" button: Each time it is pressed, the corresponding display will change in accordance with the sequence [HEAT EX.] (non-automatic) -> [BY-PASS] (non-automatic) -> [AUTO]. If [AUTO] is selected, the display will change to indicate the current mode after three seconds have passed.
Selecting the fan speed			Press the "Fan Speed" button to select either Low or High fan speed.
Stopping the Lossnay unit			Press the "ON/OFF" button. (and check the operation lamp turns off.)
OFF timer			Press the "TIMER" button during operation. 0:30 (Initial) Increasing 0:30 by pressing it once. Available setting time: 0:30 - 24:00 * Keep pressing the button for fast-forwarding. Release the button for cancelling the fast-forwarding. Timer setting will be cancelled by pressing "ON/OFF" button.
ON timer			Press the "TIMER" button during non-operation. 5:30 (Initial) Increasing 0:30 by pressing it once. Available setting time: 0:30 - 24:00 * Keep pressing the button for fast-forwarding. Release the button for cancelling the fast-forwarding. Timer setting will be cancelled by pressing "ON/OFF" button.

3-1. ON/OFF remote controller [PAC-YT40ANRA]

Dual Set Point

■ Functions

□: Each unit ○: Each group ●: Each block
 △: Each floor ◎: Group or collective X: Not available

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for the air conditioner units	◎	◎
Operation mode switching	Not available	X	X
Temperature setting	Not available	X	X
Fan speed setting	Not available	X	X
Air flow direction setting	Not available	X	X
Manual operation prohibit/permit (ON/OFF, operation mode, setting temperature, filter reset)	Compatible only with external input.	X	X
Specific mode operation prohibit (Cooling prohibit, heating prohibit, cooling/heating prohibit)	Not available	X	X
Room temperature display	Not available	—	X
Error display	LED flashes during failure. (The error code can be confirmed by removing the cover.)	—	△
Schedule operation	Not available	X	X
Ventilation operation (independent)	Group operation of only LOSSNAY units possible. ※ Only ON/OFF of group.	○	○
Ventilation operation (interlocked)	The LOSSNAY will run in interlock with the operation of indoor unit. ※ The fan rate and mode cannot be changed. The LED will turn ON only during operation after interlocking.	△	△
External input (Timer connection, emergency stop input, etc.)	The following can be input with the level signals or pulse signals. Level signal: "Emergency stop input" or "Collective ON/OFF" Pulse signal: "Collective ON/OFF" or "Local remote controller prohibit/permit" One input can be selected from those above.	◎*1	—
External output (Error output, operation output)	"ON/OFF" and "error/normal" are output with the level signal. ※ The optional output cable is required.	—	◎*1

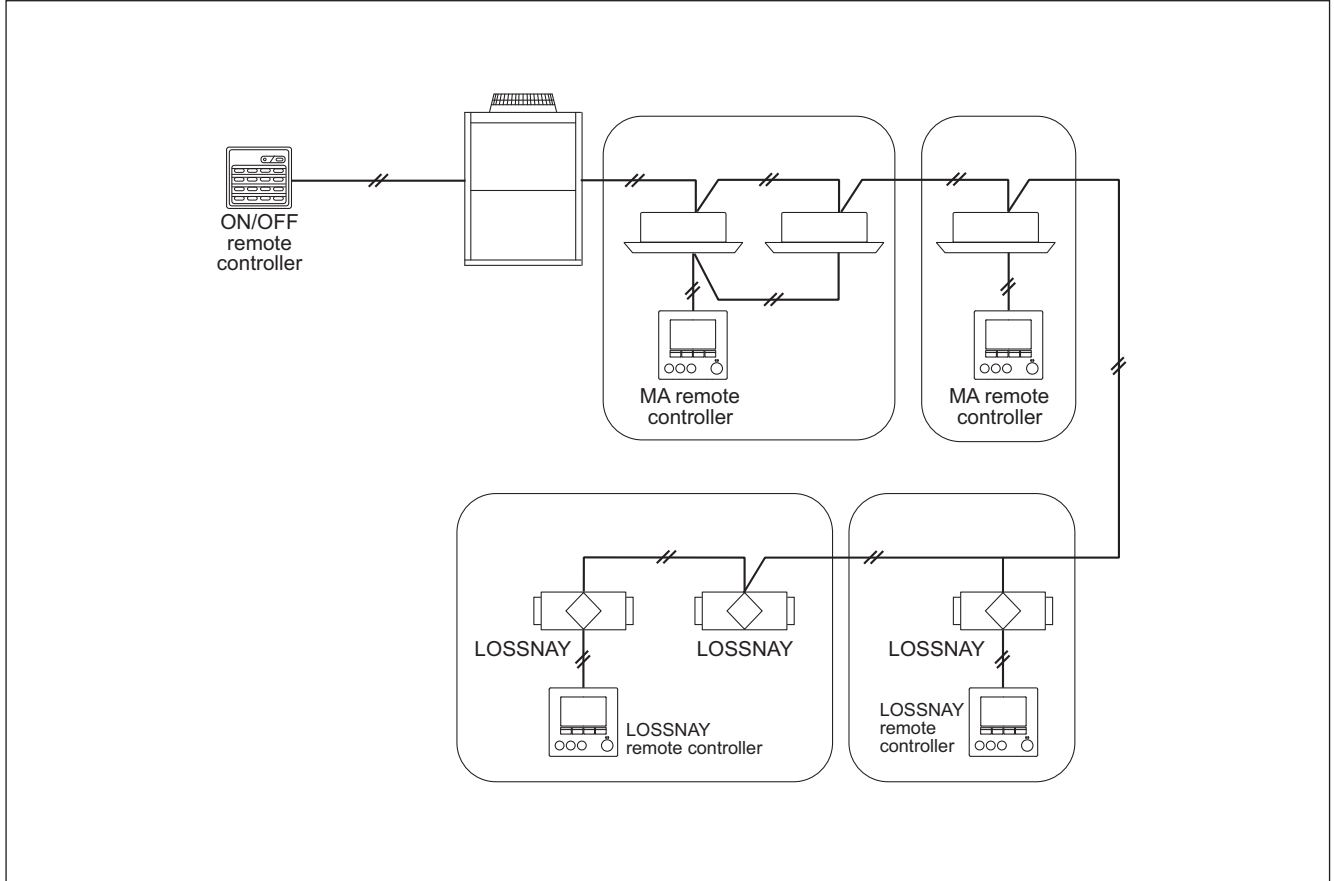

*1 Not applicable to groups

- 16 groups/50 units can be controlled.
 - Up to 16 groups/50 units can be operated with one ON/OFF remote controller.
 - A general-purpose interface is available for control, so general devices can also be turned ON and OFF.
- Just press a switch to start.
 - All of the units can be started and stopped by pressing the main switch, and each unit in the group can be started and stopped with individual switches.
- LED flashing during failure.
 - If any error should occur in the air conditioner, its details can be confirmed easily with the flashing LED. The LED also indicates whether each group is running or stopped.
- Interlock operation with external system possible.
 - It can be flexibly interlocked with a card reader, fire alarm system or building management system, etc., using the incorporated external input/output function.
- Flexible group setting.
 - The groups can be easily configured, so the group pattern can be freely set according to the layout.
 - The ON/OFF remote controller can be connected at the indoor/outdoor transmission line without the power supply unit.

NOTE

Dual set point function is available depending on the version of the controller. For the availability of the function, please contact your local distributor.

3-2. Advanced touch level signals controller [AT-50B]

Dual Set Point

■ Functions

□:Each unit ○:Each group ●:Each block ✓:Available
 △:Each floor ◎:Group or collective ✕:Not available

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for the air conditioner units. The Batch Operation ON/OFF button will light up when one or more air conditioning units are operated.	◎	◎
Operation mode switching	Switches between Cool/Dry/Auto/Fan/Heat. Operation modes vary depending on the air conditioner unit. Auto mode is for CITY MULTI R2 and WR2 series only.	◎	◎
Temperature setting	The temperature can be set within the following range. Cool/Dry: 19°C - 35°C/67°F - 95°F Heat: 4.5°C - 28°C/40°F - 83°F Auto (single set point): 19°C - 28°C/67°F - 83°F Auto (dual set points) [Cool] Same as the set temp. range for Cool mode. [Heat] Same as the set temp. range for Heat mode. * Set temperature range varies depending on the model.	◎	◎
Fan speed setting	Models with 5 air flow speed settings: Hi/Mid-1/Mid-2/Low, Auto Models with 4 air flow speed settings: Hi/Mid-1/Mid-2/Low Models with 3 air flow speed settings: Hi/Mid/Low Models with 2 air flow speed settings: Hi/Low * Fan speed setting (including Auto) varies depending on the model.	◎	○
Air flow direction setting	Air flow direction angles 4-angle or 5-angle, Swing, Auto Louver ON/OFF * Air flow direction settings vary depending on the model.	◎	○
Permit/Prohibit	The ON/OFF, operation mode, setting temperature, fan speed, air direction, filter sign reset operations, and timer using the local remote controllers can be prohibited. Only ON/OFF and filter reset can be prohibited for the LOSSNAY group. * The settable items vary depending on the models.	◎	◎
Operation lock	The operation lock can be set to the input operation of AT-50B. Each button can be set. (Function Button 1, Function Button2, Collective ON/OFF, Touch Panel) Each function can be set. (Operation mode, Setting temperature, Fan speed, Menu button) The password for the lock release can be set.	◎	◎
Error display	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. * When an error occurs, the "ON/OFF" LED flashes. The operation monitor screen show abnormal icon over the unit. The error monitor screen shows the abnormal unit address and error code. The error log monitor screen shows the time and date, the abnormal unit address, error code and source of detection.	✕	□◎
Schedule operation	Weekly schedule setting up to 12 pattern is available. In one pattern, up to 16 setting of "ON/OFF", "Operation mode", "Set Temperature", "Fan speed", "Air flow direction" and "Permit / Prohibit local operation" can be scheduled. Two types of weekly schedule(Summer/Winter) can be set. Today's schedule setting up to 5 pattern in available. * Time setting unit: 5 minute /unit	○	○
Night setback setting	This function helps keep the indoor temperature in the temperature range while the units are stopped and during the time this function is effective.	◎	◎
Ventilation (independent)	Switches the mode "Bypass/Heat recovery/Auto" for LOSSNAY groups.	◎	◎
Ventilation (interlocked)	The LOSSNAY will run in interlock with the operation of indoor unit. The mode cannot be changed. The LED will turn ON during operation after interlocking.	◎	◎
Temperature-set limitation	Batch-setting to temperature range limit at cooling, heating, and auto mode. This function cannot be used with the MA remote controller. (Depends on the indoor unit model.)	◎	◎
Specific mode operation prohibit (Cooling prohibit, heating prohibit, cooling/heating prohibit)	When set as the main controller, operation of the following modes with the local remote controllers can be prohibited. When cooling is prohibited: Cooling, dry, automatic can not be chosen. When heating is prohibited: Heating, automatic can not be chosen. When cooling/heating is prohibited: Cooling, dry, heating, automatic can not be chosen.	◎	◎
System changeover	Operation mode can be switched to an optimal mode depending on indoor temperature setting and target temperature of each group or a representative indoor unit. * When this function is used, the system changeover function of the outdoor unit cannot be used.	●	-

- AT-50B features a 5 inch color LCD touch panel. The settings for air conditioning units can be changed by touching the corresponding icons on the display. On the panel of AT-50B are 3 buttons; ON/OFF, F1 and F2 enabling simple and quick operation.
- One AT-50B can control up to 50 groups/units of air conditioners.

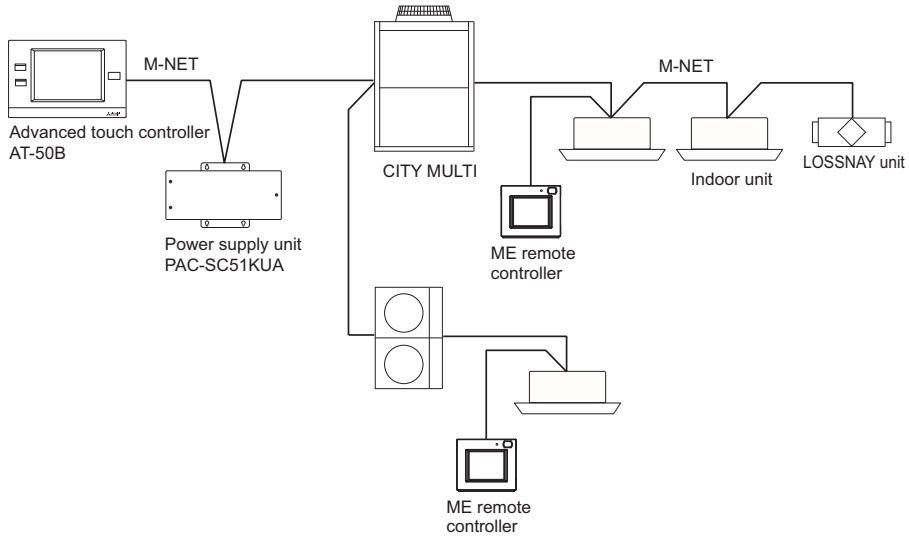

Item	Description	Operations	Display
External input (Emergency stop input, etc.)	The following input with level signals or pulse signals are available. Level signal: "Emergency stop input" or "Collective ON/OFF" Pulse signal: "Collective ON/OFF" or "Local remote controller prohibit/permit" One input can be selected from those above. * An external input/output adapter (PAC-YT51HAA (sold separately)) is required. Relays and DC power supply or other devices must be prepared at the site.	◎	◎
External output (Error output, operation output)	"ON/OFF" and "error/normal" are output with the level signal. * An external input/output adapter (PAC-YT51HAA (sold separately)) is required. Relays and DC power supply or other devices must be prepared at the site.	◎	◎
Checking the Gas Amount	Use this function to check for refrigerant leak from the outdoor unit. * When this function is used, the gas amount checking function of the outdoor unit cannot be used. This function is for CITY MULTI R2 and Y(PUMY is excluded.) series only.	□	□
Main system controller /Sub system controller	AT-50B can be set to Sub System controller. When connecting multiple system controllers, designate the system controller with many functions as the "Main", and set the system controllers with few functions as the "Sub".	✓	-
Function Buttons (F1 Button, F2 Button)	The F1 button and the F2 button can be set as a run button of the following collective operation. (Setback/Schedule/Operation Mode/Temperature Correction/Remote Controller Prohibition)	◎	◎

■ External dimension

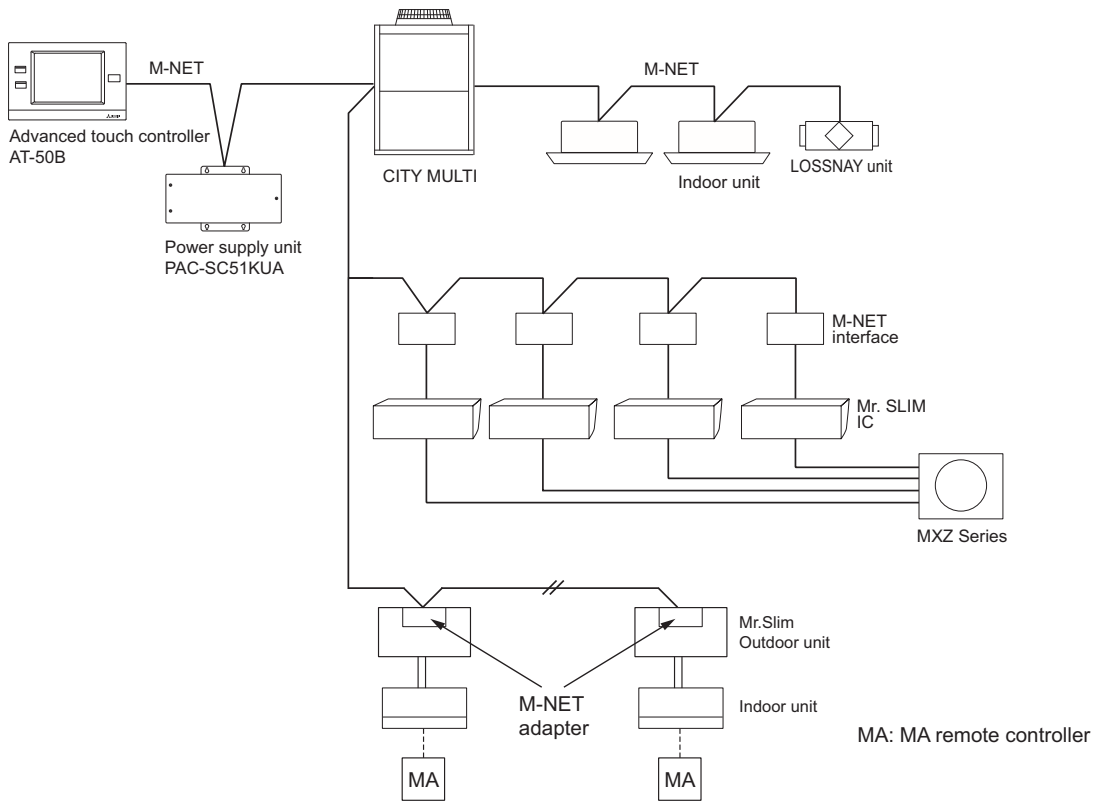

■ System example

(1) Connection with CITY MULTI units

(2) Connection with CITY MULTI and Mr.SLIM units

1. Power supply to AT-50B

AT-50B needs DC power supply of M-NET (24~32VDC) for centralized control transmission use, operation.

(1). Power supply of M-NET from power supply unit PAC-SC51KUA.

Power supply unit PAC-SC51KUA is recommended for AT-50B. See the diagram below ; for details, please refer to the installation manual of Power supply unit PAC-SC51KUA

Fig. 1 Basic structure of AT-50B and PAC-SC51KUA

(2). Power supply of M-NET from outdoor unit connector TB7.

As shown on Fig. 2, AT-50B receives power supply of M-NET from R410A outdoor unit connector TB7.

In case one of the outdoor units should change its power supply, switch CN41 to CN40.

*NOTE: This method applies to R410A CITY MULTI outdoor unit except PUMY (S series)

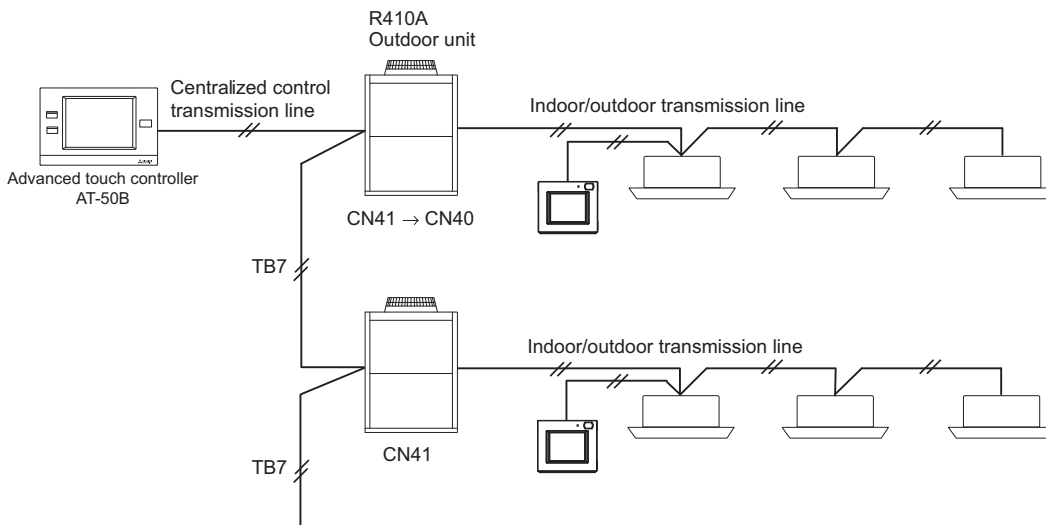

Fig. 2 AT-50B, TB7 scheme

- (3) Power supply of M-NET from outdoor unit connector TB3.
 AT-50B can also receive power supply from R410A/R407C/R22 outdoor unit connector TB3. However, if the outdoor unit shuts down, AT-50B will also automatically shut down. Therefore, this scheme is not recommended for air conditioning system consisting of multiple outdoor units.

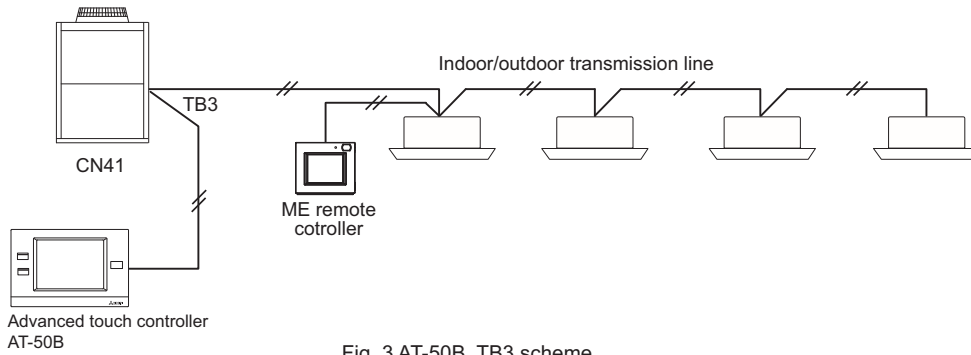

Fig. 3 AT-50B, TB3 scheme.

2. External input/output usage

(1). External signal input function

* External signal input requires the external I/O adapter (Model: PAC-YT51HAA) sold separately.

1). External input

External no-voltage contact signal can be used to send signals indicating the following status of all air conditioning units that are controlled : Emergency stop/Normal, ON/OFF, and local remote controller operation Prohibit/Permit. The above settings can be made using the external input setting on the Initial Setting screen accessed from the Service Menu screen.

No	External signal input function	Remarks
1	Do not use external input signal (factory setting)	
2	Execute emergency stop/normal with level signal	The local remote controller ON/OFF operations, and the controller ON/OFF operation and prohibit/enable change operations will be prohibited during emergency stop.
3	Perform ON/OFF with level signal	The local remote controller ON/OFF operations, and the controller ON/OFF operations and prohibit/enable change operations will be prohibited.
4	Perform ON/OFF, prohibit/enable with pulse signals.	Set the pulse width while the contact is ON to 0.2 to 1 sec.

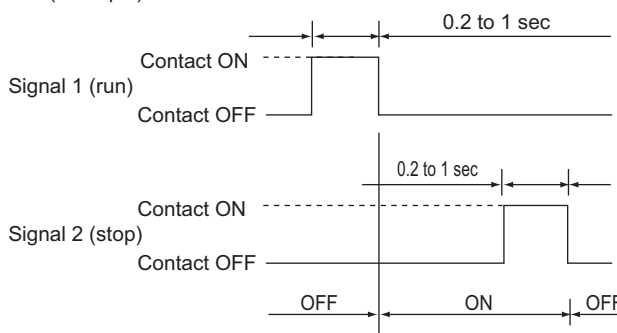

2). Level signal and pulse signal

(A) Level signal

(B) Pulse signal

(Example) for ON/OFF

* The prohibit/enable input is the same.

3). External input specifications

CN2	Lead wire	Emergency stop/normal level signal	ON/OFF, level signal	ON/OFF, prohibit/enable pulse signal
No.1	Green	Built-in power supply for external input (DC5V)		
No.2	Yellow	Emergency stop/normal input	ON/OFF input	ON input
No.3	Orange	Not used	Not used	OFF input
No.4	Red	Not used	Not used	Local remote controller operation prohibit input
No.5	Brown	Not used	Not used	Local remote controller operation enable input

(A) For level signal

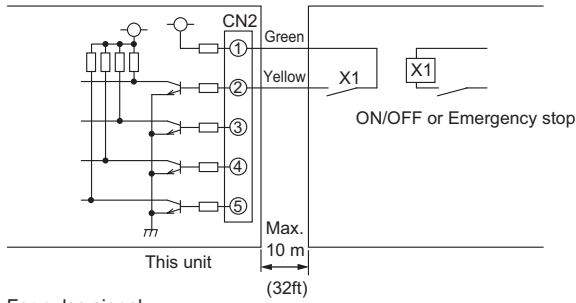

- ① When the emergency stop/normal signal is selected, the status will change from normal to emergency stop when the external input signal contact changes from OFF to ON, and will change from emergency stop to normal when the contact changes from ON to OFF. Emergency stop signal will bring the air conditioners to stop, and canceling the emergency stop will not automatically reset these units. To go back to the previous operation status, they must be manually turned back on.
- ② When the ON/OFF signal is selected, the status will change from OFF to ON when the external input signal contact changes from OFF to ON, and will change from ON to OFF when the contact changes from ON to OFF.

(B) For pulse signal

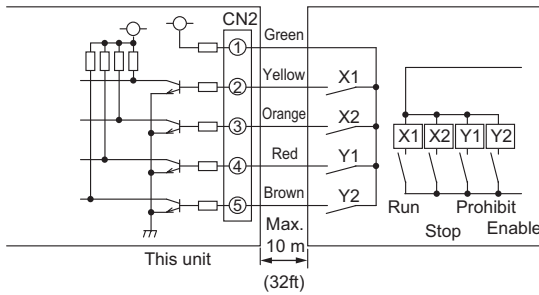

- ① Even if the ON signal is input during ON, the status will remain ON.
- ② If local remote controller operation is prohibited, ON/OFF, operation mode, set temperature, filter sign reset, fan speed, and air direction settings will be prohibited, and also timer (schedule) settings from the local remote controllers will be deactivated. Depending on the models of the connected air conditioning units and remote controllers, operation of some of the items above may not be disabled.
- ③ Set the pulse width (contact ON time) to 0.2 to 1 sec.

4). Recommended circuit example

(A) For level signal

(B) For pulse signal

- ① The relays and extension cables, etc. must be prepared separately at the site.
- ② Use a no-voltage contact and minute load relay (minimum application load 5VDC-1mA).
- ③ The length of the connection cable extension should not exceed 10 m (32 ft). (Use a cable of 0.3 mm² (22 AWG) or thicker.)
- ④ Cut of the cable not being used close the connector and properly insulate the cut off ends with tape or the like.

(2). External signal output function

※ External signal output requires the external I/o adapter (Model: PAC-YT51HAA) sold separately.

1). External output

When one or more air conditioners are running, the "ON" signal will be output and if a malfunction occurs in one or more air conditioners, the "Malfunction" signal will be shown.

2). External output specifications

CN 3	Lead wire	Details of each terminal
No.1	Brown	ON/OFF
No.2	Red	Malfunction/normal
No.3	Orange	Common (External ground)
No.4	Yellow	

① "ON" signal and " Malfunction" signal will both be output.

3). Recommended circuit example

Use Z1 and Z2 relays having the following specifications.
 Operation coil
 Rated voltage :12VDC, 24VDC
 Power Consumption : 0.9W or less
 (*1)Prepare a power supply separately according to the relay being used. (12VDC or 24VDC)
 (*2)Always insert a diode on both ends of the relay coil.

- ① Each element will turn on while ON operation or a malfunction occurs.
- ② The connection cable can be extended up to 10m (32ft).
- ③ The relays, lamps, diodes and extension cables, etc. must be prepared separately at the site.

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for the air conditioner units	○◎△●	○◎
Operation mode switching	Switches between Cool/Dry/Auto/Fan/Heat. (Group of LOSSNAY unit: automatic ventilation/vent-heat interchange/normal ventilation) Operation modes vary depending on the air conditioner unit. Auto mode is the City Multi R2 and WR2 series only.	○◎△●	○
Temperature setting	The temperature can be set within the following range. Cool/Dry: 19°C - 35°C/67°F - 95°F Heat: 4.5°C - 28°C/40°F - 83°F Auto (single set point): 19°C - 28°C/67°F - 83°F Auto (dual set points) [Cool] Same as the set temp. range for Cool mode. [Heat] Same as the set temp. range for Heat mode. * Set temperature range varies depending on the model.	○◎△●	○
Sliding Temperature setting	This function shifts the preset temperature by the preset increment to reduce the temperature difference between the indoor and outdoor air temperatures during cooling operation. The maximum shifting temperature (±1°C, ±2°C, ±3°C, ±4°C) can be set for each group.	○	○
Night setback setting	This function helps keep the indoor temperature in the temperature range while the units are stopped and during the time this function is effective.	○	○
Fan speed setting	Models with 5 air flow speed settings: Hi/Mid-1/Mid-2/Low, Auto Models with 4 air flow speed settings: Hi/Mid/Low, Auto Models with 2 air flow speed settings: Hi/Low Fan speed setting (including Auto) varies depending on the model.	○◎△●	○
Air flow direction setting	Air flow direction angles, 4-angle or 5-angle Swing, Auto *1: Louver cannot be set. *Air flow direction settings vary depending on the model.	*1 ○◎△●	○
Schedule operation	Annual/Weekly (5 types)/Today schedule can be set for each group of air conditioning units. Optimized start setting is also available. *2: The system follows either the current day, annual schedule, or weekly, which are in the descending order of overriding priority. Twenty-four events can be scheduled per day, including ON/OFF, Mode, Temperature Setting, Vane Direction, Fan Speed, and Operation Prohibition. Five types of weekly schedule(Summer/Winter/etc.) can be set. Settable items depend on the functions that a given air conditioning unit supports.	*2 ○◎△●	○
Permit/Prohibit local operation	Individually prohibit operation of each local remote control function (ON/OFF, Change operation mode, Set temperature, Reset filter), Air Direction, Fan speed, Timer *3: The settable items vary depending on the models.	○◎△●	○*3
Indoor unit intake temperature	Measures the intake temperature of the indoor unit. *8: Displays the ambient temperature of either the return air temperature sensor on the indoor unit or the temperature sensor on the remote controller, whichever is selected on the indoor temperature display mode selection.	×	○*8
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. *4: When an error occurs, the "ON/OFF" LED flashes. The operation monitor screen shows the abnormal unit by flashing it. The error monitor screen shows the abnormal unit address, error code and source of detection. The error log monitor screen shows the time and date, the abnormal unit address, error code and source of detection.	×	□◎*4
Test run	This operates air conditioner units in test run mode.	○◎△●	○
Ventilation equipment	The interlocked system settings can be performed by the master system controller. When setting the interlocked system, you can use the ventilation switch to switch the free plan LOSSNAY settings between "Hi", "Low" and "Stop". When setting a group of only free plan LOSSNAY units, you can switch between "Normal ventilation", "Interchange ventilation" and "Automatic ventilation". *5 When setting ventilation interlock with Mr.Slim units, the air conditioning and interlocked ventilation icon will display ON even when the interlocked LOSSNAY is operating by itself. (This will occur when used with the following M-NET adapter: PAC-SF48/50/60/70/80/81MA-E)	○◎△●	○*5
External input/output	By using accessory cables you can set and monitor the following. Input: By level signal: "Batch ON/OFF", "Batch emergency stop" By pulse signal: "Batch ON/OFF", "Enable/disable local remote control" Output: "ON/OFF", "Error/Normal" *6: Requires an external I/O cable (PAC-YG10HA-E; sold separately) and a commercially available external power supply.	◎*6	◎*6
Temp range limit settings	Sets the temperature range for the local remote controllers. *7: The item and range that can be operated or monitored depend on the function of the indoor unit.	○*7	○
AHC status	Displays the status of input and output ports of each Advanced HVAC CONTROLLER (AHC).	×	□
Free Contact status	Displays the input/output status of the free contacts on the indoor units.	×	□
Measurement	Displays the temperature, humidity, and the reading of the watt-hour meter.	×	□
Outdoor Unit Status Monitor	Monitor the current outdoor unit status Data: Frequency (Compressor), high/low pressure (outdoor unit)	×	□
Energy Use Status	On the Energy Use Status screen, the energy-control-related status, such as electric energy consumption, operation time, and outdoor temperature, can be displayed in a graph. Operators can check the detailed status of given indoor units by specifying the date to display the data per group, block, or unit address.	×	□○●
Filter sign reset/ Filter sign	Filter sign can be reset for each group or block of indoor units. Filter sign indicates that the filter on the units in a given group is due for cleaning.	□○●	□○●
Interlock setting	Operation of indoor groups or general equipment can be interlocked by the change of state (ON/OFF, mode, error of indoor groups and general equipment). (AE-200E/AE-50E will execute interlocking control depending on the interlocked setting.)	○	○
Data back-up (PC) or USB memory	The initial setting data, operation data (charge parameter, power consumption data) can be stored in the PC, or USB memory.	◎	-
Apportioned electricity charge function	The amount of power consumed by the air conditioners is calculated with the use of AE-200E. The calculated data can be output to the PC via USB memory or LAN, and the charge report can be created with the use of the designated charge calculation tool.	○	○

NOTE: Depending on the versions of AE-200E, some of the functions may not be available. The external input/output terminal on AE-200E becomes unavailable when AE-200E is connected to AE-50E/EW-50E. Use the terminals on AE-50E/EW-50E in that case.

Java™ is a registered trademark of Oracle and/or its affiliates.

External dimension

1. Power supply to AE-200E

AE-200E needs AC power (100-240VAC) and M-NET; the former is for centralized control transmission use and the latter is for AE-200E's operating and LAN function use.

Except when the sub system controller is used, the power supply unit PAC-SC51KUA or the power supply from the outdoor unit to M-NET is not necessary. For more details, please refer to the Installation Manual of AE-200E/AE-50E.

(1). The basic scheme is as follows.

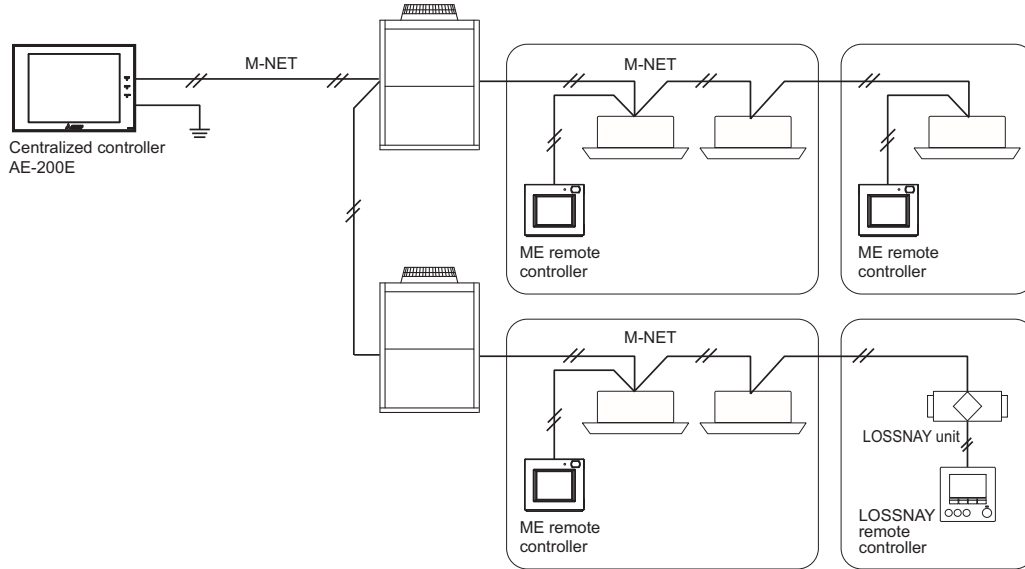

Fig.1 AE-200E basic scheme.

2. M-NET power supply

AE-200E/AE-50E has a built-in function to supply power to the M-NET transmission line.

The amount of power that an AE-200E or an AE-50E can supply is equivalent to the power required by an MN converter (CMS-MNG-E) that is used for maintenance.

Note	<ul style="list-style-type: none"> • Supplying power from the outdoor unit or the power supply unit, it is necessary to disconnect the M-NET power jumper CN21. (At factory setting, CN21 is connected.) • When connecting both AE-200E/AE-50E and the system controller (Advanced touch controller, ON/OFF remote controller, etc.) to the same M-NET system, it is necessary to connect the power supply unit (PAC-SC51KUA), and disconnect the M-NET power jumper CN21 on AE-200E/AE-50E. • When connecting both AE-200E/AE-50E and BAC-HD150 (BM ADAPTER) to the same M-NET system, certain restrictions apply. Consult your dealer for details.
-------------	--

3. External input/output usage

* To use the external signal input, an external I/O adapter (PAC-YG10HA-E; sold separately) and an external power supply are required.

NOTE: When using the AE-200E connected with the AE-50E/EW-50E, use external input/output function of each AE-200E/AE-50E/EW-50E.

[External signal input function]

Using external contact signals (12 or 24 VDC), the following collective operations for all connected air conditioning units can be controlled: Emergency stop, ON/OFF operation, and Prohibit/Permit local remote controller operation.

(1) External signal input function setting

Setting mode	Description
[Demand (Level signal)/Not in use] (Factory setting)	Select this mode when inputting a demand level using a level signal, or when not using an external signal input function. A demand signal of four different levels will be input.
[Emergency Stop (Level signal)]	Using a level signal, all the air conditioning units connected to the AE-200E or AE-50E/EW-50E will be stopped collectively in an emergency. During an emergency stop, the ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the AE-200E or AE-50E/EW-50E will be prohibited. A demand signal of three different levels will be input.
[ON/OFF (Level signal)]	Using a level signal, all the air conditioning units connected to the AE-200E or AE-50E will be run or stopped collectively. The ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the AE-200E or AE-50E/EW-50E will be prohibited. Scheduled operations will not be performed.
[ON/OFF/Prohibit/Permit (Pulse signal)]	Using a pulse signal, all the air conditioning units connected to the AE-200E or AE-50E/EW-50E will be run or stopped collectively, or the operation from the local remote controllers will be prohibited or permitted collectively.

* General equipment connected via a DIDO controller (PAC-YG66DCA) cannot be collectively run or stopped by using the external signal input function unless [Emergency Stop (Level signal)] is selected and relevant switches on the DIDO controller are set.

* The external input function cannot be used on HWHP (CAHV) units.

(2) External signal input specifications

CN5	Lead wire from PAC-YG10HA-E	Demand (Level signal)	Emergency Stop (Level signal)	ON/OFF (Level signal)	ON/OFF/Prohibit/Permit (Pulse signal)
No. 5	Orange	Demand level 1	Emergency stop signal, Normal operation signal	ON signal, OFF signal	ON signal
No. 6	Yellow	Demand level 2	Demand level 2	–	OFF signal
No. 7	Blue	Demand level 3	Demand level 3	–	Prohibit signal
No. 8	Gray	Demand level 4	Demand level 4	–	Permit signal
No. 9	Red	External power supply (+12 or +24 VDC)			

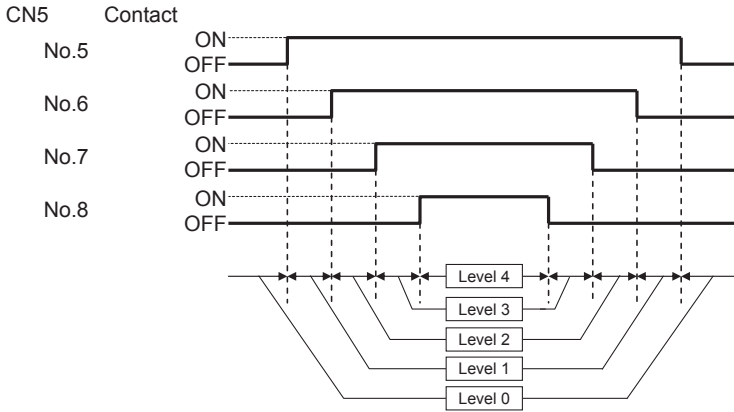

(3) Level signal and pulse signal

(A) Level signal

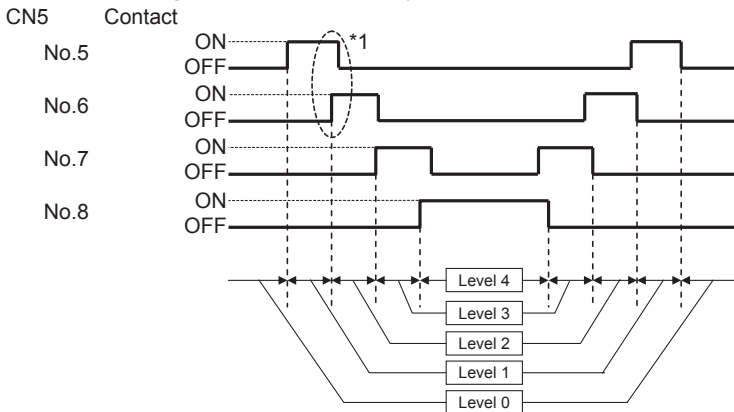

How the demand level is determined

Demand level signal specification: When higher levels' contacts turn on, lower levels' contacts also stay on.

Demand level signal specification: Only the current levels' contacts turn on.

*1 The specification must be followed in the following order: ① When the level changes, the contact of the level after the change turns on.; ② The contact of the level before the change turns off.

1. If [Emergency stop (Level signal)] is selected, the air conditioning units in normal operation will stop when the contact turns on. Even when the contact turns off, these units will remain stopped. They must be started up manually after the emergency stop is reset.
2. If [ON/OFF (Level signal)] is selected, the air conditioning units that are stopped will start operation when the contact turns on. Conversely, the units that are in operation will stop when the contact turns off.
3. Demand control is performed when the demand level contact turns on. If two different demand levels' contacts turn on at the same time, the demand control will be performed with the higher level demand. (Even if the demand control is not performed due to unexpected problems, Mitsubishi Electric will not be responsible for exceeding the maximum power demand.)

(B) Pulse signal

(Example) ON/OFF

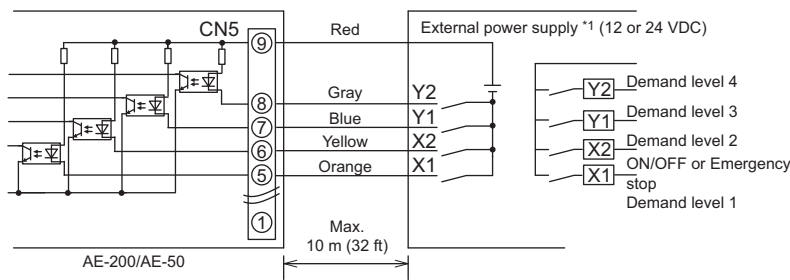

(Example) Prohibit/Permit

1. If the input pulse signal is the same as the current operation status of the air conditioning units, no status change will occur. (For example, if an ON signal is input while the air conditioning units are in operation, the units will continue their operation.)
2. If the operation from the local remote controller is prohibited, ON/OFF status, operation mode, or temperature setting cannot be changed and filter sign cannot be reset from the local remote controller.
3. The pulse width (contact ON) should be between 0.5 and 1.0 second.

(4) Recommended circuit

(A) Level signal

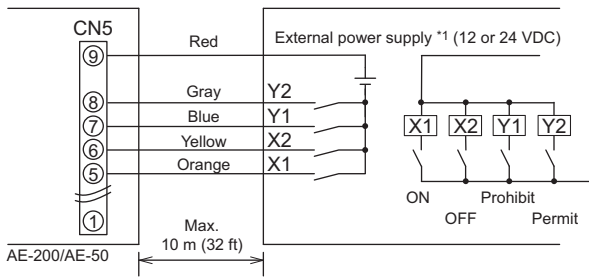

Use relays X1, X2, Y1, and Y2 that meet the following specifications.

Contact rating

- Rated voltage: 12 VDC or above
- Rated current: 0.1 A or above
- Minimum applied load: DC 1 mA

(B) Pulse signal

*1 Select an external power supply suitable for the relays used. (12 or 24 VDC)
Connect the external power supply in the correct polarity to input and output the signals.
Connect ⑤-⑧ (see the figure at left) to the negative side.

Important

- Be sure to use an external power supply (12 or 24 VDC) to avoid malfunctions.
- Connect the external power supply in the correct polarity to avoid malfunctions.

Note

- The relays, external power supply, and extension cables are not supplied.
- The total length of the lead wire and extension cable should not exceed 10 m (32 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Cut the excess cable near the connector, and insulate the end of the unused cable with tape.

[Pulse signal input function]

Using pulse signals directly input from metering device such as watt-hour meter, billing data and energy management data will be obtained based on the cumulative number of pulse signal input.

Note

- To input pulse signals directly from the metering device to the AE-200E/AE-50E, use the connector connected to the AE-200E/AE-50E. (A precision screwdriver for M1 screws is required.)

Usability of a built-in PI controller for each function

Function	AE-200E	AE-50E	EW-50E
Apportioned electricity billing function (option)	x*1	V*2	V*2
Energy management	V	V	V
Demand function (option)	V	V	V

(V): Usable, (x): Not usable

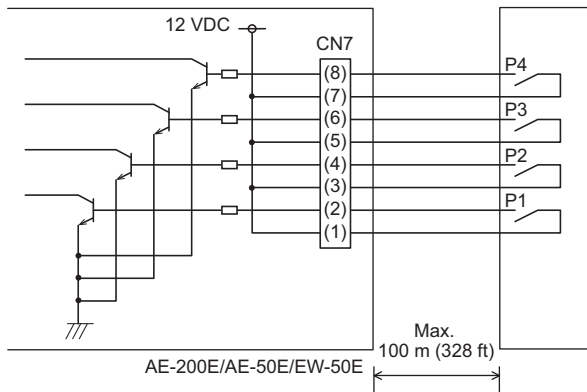

*1 A built-in PI controller on the AE-200E cannot be used for an apportioned electricity billing function. Use a built-in PI controller on the AE-50E or EW-50E.

*2 Using a PI controller (PAC-YG60MCA) is recommended instead of a built-in PI controller on the AE-50E/EW-50E when using an apportioned electricity billing function. (Discrepancies may occur between the built-in PI controller reading and the actual electric energy because the pulse input cannot be obtained during the AE-50E/EW-50E power failure, shutoff process, and software update.)

(1) Pulse signal input specifications

CN7	Signal
No. 7, 8	Metering device 4 (count input)
No. 5, 6	Metering device 3 (count input)
No. 3, 4	Metering device 2 (count input)
No. 1, 2	Metering device 1 (count input)

(2) Recommended circuit

A voltage of 12 VDC is applied to CN7. Do not apply a power voltage from any other power source.

Contact rating
 Rated voltage: 12 VDC
 Rated current: 0.1 A or above
 Minimum applied load: DC 1 mA

Note

- The total length of the lead wire and extension cable should not exceed 100 m (328 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Cut the excess cable near the connector, and insulate the end of the unused cable with tape.
- Do not run the signal input cable adjacent to the M-NET transmission and power cables. Do not let the cable form a loop.
- Peel off the sheath to 6 ±1 mm (4/16 ±1/16 in) from the end, and securely insert the cable into the terminal.
- Leave adequate slack in the cables so that the weight of them will not strain the terminal connectors. Use cable clamps or trunk terminals as necessary.

[External signal output function]

An ON signal is output when one or more units are in operation, and an Error signal is output when one or more units are in error.

(1) External signal output specifications

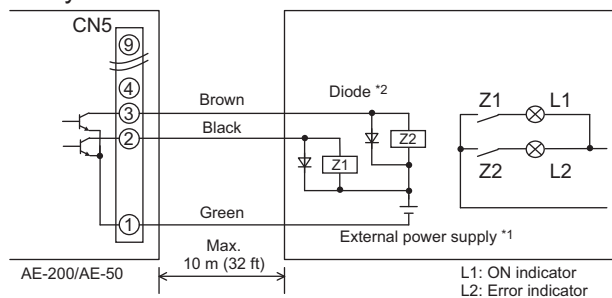

CN5	Lead wire from PAC-YG10HA-E	Signal
No. 1	Green	Common ground for external output (Ground for the external power supply)
No. 2	Black	ON signal*, OFF signal
No. 3	Brown	Error signal, Normal signal

* The operation status of general equipment (via a DIDO controller (PAC-YG66DCA)) will not be output.

* The ON signal will be output even during an error.

(2) Recommended circuit

Relay-driven circuit

Use relays Z1 and Z2 that meet the following specifications.

Operation coil

Rated voltage: 12 or 24 VDC

Power consumption: Max. 0.9 W

*1 Select an external power supply suitable for the relays used. (12 or 24 VDC)

Connect the external power supply in the correct polarity to input and output the signals.

Connect ① (shown in the figure at left) to the negative side.

*2 Use a diode at both ends of the relay coils.

Important

- Be sure to use an external power supply (12 or 24 VDC) to avoid malfunctions.
- Connect the external power supply in the correct polarity to avoid malfunctions.
- Do not connect the external power supply without relays being connected to the controller (no load).

Note

- The relays, lamps, external power supply, diodes, and extension cables are not supplied.
- The total length of the lead wire and extension cable should not exceed 10 m (32 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Each element will turn on during operation and when an error occurs.

Note

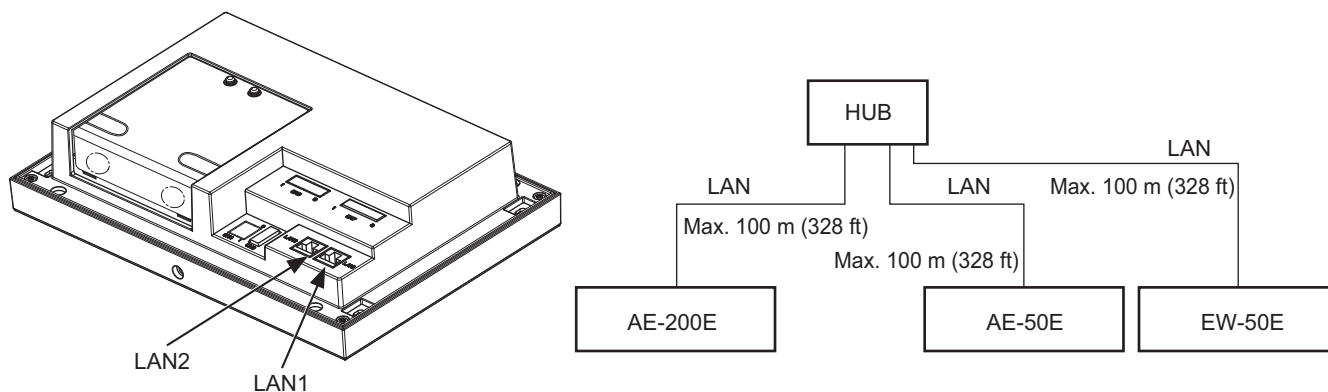

* When connecting the external input/output cables to connector CN5 on the controller, punch out the knockout hole.

4. Connecting the LAN cable

Connect the LAN cable to the LAN1 port on the AE-200E/AE-50E/EW-50E. (The LAN2 port is unused.)

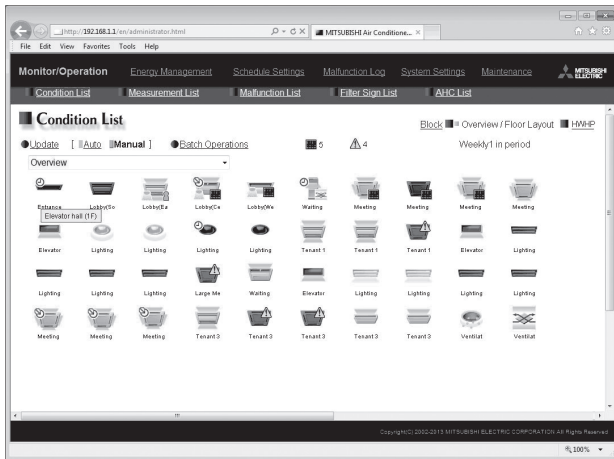

- The LAN cable is not supplied. Use a category 5 or above straight LAN cable.
- Use a switching HUB.
- The maximum distance between the switching HUB and AE-200E/AE-50E/EW-50E is 100 m (328 ft).
- The recommended number of connected devices such as gateway, router, layer 3 switch, or HUB between the AE-200E and AE-50E/EW-50E is four or less.

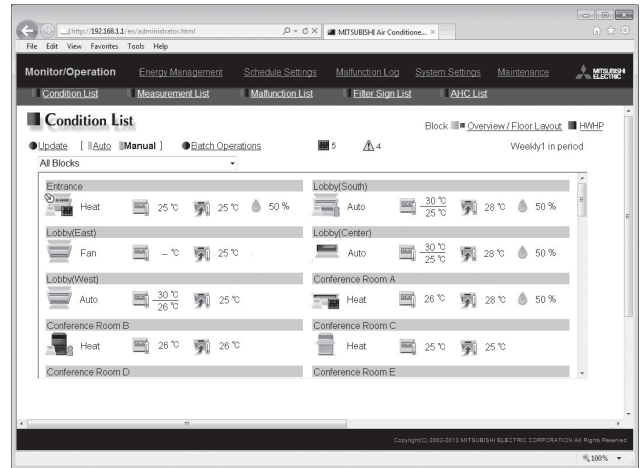

Note

- LAN must be installed before the unit installation. Route the LAN cable to the AE-200E/AE-50E/EW-50E in the same way as the M-NET transmission cables.
- When connecting the AE-200E/AE-50E/EW-50E to an existing LAN, consult the system administrator to decide the IP address. Change the IP address setting before connecting the LAN cable to the LAN1 port.
- To prevent unauthorized access, always use a security device such as a VPN router when connecting the AE-200E/AE-50E/EW-50E to the Internet.

Model	Description
PAC-YG84UTB	Electrical box for AE-200E wall-embed installations
PAC-YG10HA-E	External input/output adapter for AE-200E/AG-150A/GB-50ADA-J/PAC-YG50ECA
PAC-YG86TK	Mounting kit for AE-200E/AE-50E installations inside the control panel
PAC-YG82UTB-J	Mounting attachment for AE-200E wall surface installations

3-4. Centralized controller [EW-50E]

Dual Set Point

Functions

□: Each unit ○: Each group ●: Each block
△: Each floor ◎: Collective ×: Not available

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for the air conditioner units	○ ◎ △ ●	○ ◎
Operation mode switching	Switches between Cool/Dry/Auto/Fan/Heat. (Group of LOSSNAY unit: automatic ventilation/vent-heat interchange/normal ventilation) Operation modes vary depending on the air conditioner unit. Auto mode is the City Multi R2 and WR2 series only.	○ ◎ △ ●	○
Temperature setting	Range of temperature setting Cool/Dry : 19°C - 30°C (14°C - 30°C) / 67°F - 87°F (57°F - 87°F) Heat : 17°C - 28°C (17°C - 28°C) / 63°F - 83°F (63°F - 83°F) Auto (single set point): 19°C - 28°C (17°C - 28°C) / 67°F - 83°F (63°F - 83°F) Auto (dual set points) [Cool] Same as the set temp. range for Cool mode. [Heat] Same as the set temp. range for Heat mode. *: Range of temperature settings vary depending on model.	○ ◎ △ ●	○
Sliding Temperature setting	This function shifts the preset temperature by the preset increment to reduce the temperature difference between the indoor and outdoor air temperatures during cooling operation. The maximum shifting temperature (±1°C, ±2°C, ±3°C, ±4°C) can be set for each group.	○	○
Night setback setting	This function helps keep the indoor temperature in the temperature range while the units are stopped and during the time this function is effective.	○	○
Fan speed setting	Models with 5 air flow speed settings: Hi/Mid-1/Mid-2/Low, Auto Models with 4 air flow speed settings: Hi/Mid/Low, Auto Models with 2 air flow speed settings: Hi/Low Fan speed setting (including Auto) varies depending on the model.	○ ◎ △ ●	○
Air flow direction setting	Air flow direction angles, 4-angle or 5-angle Swing, Auto *1: Louver cannot be set. *Air flow direction settings vary depending on the model.	*1 ○ ◎ △ ●	○
Schedule operation	Annual/Weekly (5 types)/Today schedule can be set for each group of air conditioning units. Optimized start setting is also available. *2: The system follows either the current day, annual schedule, or weekly, which are in the descending order of overriding priority. Twenty-four events can be scheduled per day, including ON/OFF, Mode, Temperature Setting, Vane Direction, Fan Speed, and Operation Prohibition. Five types of weekly schedule (Summer/Winter/etc.) can be set. Settable items depend on the functions that a given air conditioning unit supports.	*2 ○ ◎ △ ●	○
Permit/Prohibit local operation	Individually prohibit operation of each local remote control function (ON/OFF, Change operation mode, Set temperature, Reset filter). Air Direction, Fan speed, Timer *3: The settable items vary depending on the models.	○ ◎ △ ●	○ *3
Indoor unit intake temperature	Measures the intake temperature of the indoor unit. *8: Displays the ambient temperature of either the return air temperature sensor on the indoor unit or the temperature sensor on the remote controller, whichever is selected on the indoor temperature display mode selection.	×	○ *8
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. *4: When an error occurs, the "ON/OFF" LED flashes. The operation monitor screen shows the abnormal unit by flashing it. The error monitor screen shows the abnormal unit address, error code and source of detection. The error log monitor screen shows the time and date, the abnormal unit address, error code and source of detection.	×	□ ◎ *4
Test run	This operates air conditioner units in test run mode.	○ ◎ △ ●	○
Ventilation equipment	The interlocked system settings can be performed by the master system controller. When setting the interlocked system, you can use the ventilation switch to switch the free plan LOSSNAY settings between "Hi", "Low" and "Stop". When setting a group of only free plan LOSSNAY units, you can switch between "Normal ventilation", "Interchange ventilation" and "Automatic ventilation". *5 When setting ventilation interlock with Mr.Slim units, the air conditioning and interlocked ventilation icon will display ON even when the interlocked LOSSNAY is operating by itself. (This will occur when used with the following M-NET adapter: PAC-SF48/50/60/70/80/81MA-E)	○ ◎ △ ●	○ *5
External input/output	By using accessory cables you can set and monitor the following. Input: By level signal: "Batch ON/OFF", "Batch emergency stop" By pulse signal: "Batch ON/OFF", "Enable/disable local remote controller". Output: "ON/OFF", "Error/Normal" *6: Requires an external I/O cable (PAC-YG10HA-E; sold separately) and a commercially available external power supply.	◎ *6	◎ *6
Temp range limit settings	Sets the temperature range for the local remote controllers. *7: The item and range that can be operated or monitored depend on the function of the indoor unit.	○ *7	○
AHC status	Displays the status of input and output ports of each Advanced HVAC CONTROLLER (AHC).	×	□
Free Contact status	Displays the input/output status of the free contacts on the indoor units.	×	□
Measurement	Displays the temperature, humidity, and the reading of the watt-hour meter.	×	□
Outdoor Unit Status Monitor	Monitor the current outdoor unit status Data: Frequency (Compressor), high/low pressure (outdoor unit)	×	□
Energy Use Status	On the Energy Use Status screen, the energy-control-related status, such as electric energy consumption, operation time, and outdoor temperature, can be displayed in a graph. Operators can check the detailed status of given indoor units by specifying the date to display the data per group, block, or unit address.	×	□ ○ ●
Filter sign reset/ Filter sign	Filter sign can be reset for each group or block of indoor units. Filter sign indicates that the filter on the units in a given group is due for cleaning.	□ ○ ●	□ ○ ●
Interlock setting	Operation of indoor groups or general equipment can be interlocked by the change of state (ON/OFF, mode, error of indoor groups and general equipment). (EB-50GU will execute interlocking control depending on the interlocked setting.)	○	○
Data back-up (PC)	The initial setting data, operation data (charge parameter, power consumption data) can be stored in the PC.	◎	-

A. The use of EW-50E combined with AHC will allow the use of external signal, making it possible to use integrated control of air conditioning systems including third-party HVAC products.

B. The centralized controller of EW-50E combines Web function, which enable the air conditioner system management on a PC browser screen. *1 The management even carried out at a long distance place via public telephone line or internet.

*1 Microsoft® Internet Explorer 8.0
Microsoft® Internet Explorer 9.0
Microsoft® Internet Explorer 10.0
Microsoft® Internet Explorer 11.0

* Java™ execution environment is required. (Oracle® Java™ Plug-in Ver. 1.8.0_25)

* Install Oracle® Java™ Plug-in that is appropriate for your operating system. When using a 64-bit Internet Explorer, install a 64-bit Java™ Plug-in.

* The version of the Oracle® Java™ Plug-in can be verified by clicking [Java™] in the Control Panel.

C. Together with integrated centralized control software TG-2000A, and/or PI, DIDO controller, many optional functions like "Charging", "Peak-cut", "Energy saving", "General equipment management", "Scheduling" etc, can be carried out. Details, please refer to sections of TG-2000A and/or PI, DIDO controller, PLC software.

* AE-200E connected with AE-50E cannot be connected to the PLC (PAC-YG21CDA).

* Contact your local distributor for which version of TG-2000A supports EW-50E.

D. One EW-50E can control maximum 50 units (including LOSSNAY). Up to 200 units (including LOSSNAY) can be controlled from one AE-200E connected with four expansion controllers (AE-50E/EW-50E). Up to four expansion controllers can be connected to one AE-200E with Ver.7.2 or later. When four expansion controllers are connected, the air conditioning units cannot be connected to AE-200E. The integrated centralized control software TG-2000A can manage maximum 2000 units (including LOSSNAY). For details, refer to TG-2000A page.

E. Taking advantage of AE-200E's Web functions, alarming E-mail containing address and error code can be sent to appointed E-mail address upon any fault happen at the air conditioner system. This could release standby personnel and save operation cost.

F. The interlock-control option enables interlocked operations of air conditioning unit groups and the general equipment groups, based on the changes of status in the ON/OFF, Mode, or Error signals. (Can be set from the Web browser only)

NOTE: Depending on the versions of EW-50E, some of the functions may not be available. The external input/output terminal on AE-200E becomes unavailable when AE-200E is connected to EW-50E. Use the terminals on EW-50E in that case.

Java™ is a registered trademark of Oracle and/or its affiliates.

■ External dimension

When using L-fittings

Unit: mm (in)

When using DIN rail

1. Power supply to EW-50E

EW-50E needs AC power (100-240VAC) and M-NET; the former is for centralized control transmission use and the latter is for EW-50E's operating and LAN function use.

Except when the power consumption coefficient exceeds 1.5, the power supply unit, the power supply unit PAC-SC51KUA or the power supply from the outdoor unit to M-NET is not necessary.

For more details, please refer to the Installation Manual of EW-50E.

(1). The basic scheme is as follows.

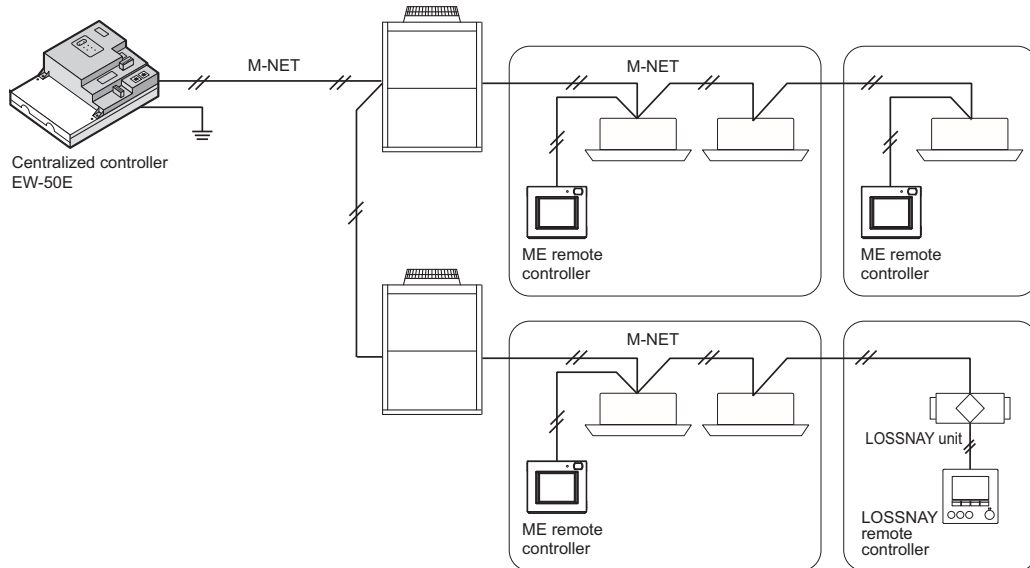

Fig.1 EW-50E basic scheme.

2. M-NET power supply

EW-50E has a built-in function to supply power to the M-NET transmission line. (power supply coefficient:1.5)

When power is supplied from EW-50E, the types of system controllers listed in the table below are connectable.

	System controller		M-NET remote controller	
	Advanced touch controller	ON/OFF remote controller	LOSSNAY remote controller	ME remote Controller
Power consumption coefficient	1.5	1	0.25	0.5
Connectable units	1 unit	1 unit	6 units	3 units

Note	<ul style="list-style-type: none"> • Supplying power from the outdoor unit or the power supply unit, it is necessary to disconnect the M-NET power jumper CN21. (At factory setting, CN21 is connected.) • When the power consumption coefficient exceeds 1.5, it is necessary to connect the power supply unit (PAC-SC51KUA), and disconnect the M-NET power jumper CN21 on EW-50E. • When connecting both EW-50E and BAC-HD150 (BM ADAPTER) to the same M-NET system, certain restrictions apply. Consult your dealer for details.
-------------	--

3. External input/output usage

※ To use the external signal input, an external I/O adapter (PAC-YG10HA-E; sold separately) and an external power supply are required.

NOTE: When using the AE-200E connected with the AE-50E/EW-50E, use external input/output function of each AE-200E/AE-50E/EW-50E.

[External signal input function]

Using external contact signals (12 or 24 VDC), the following collective operations for all connected air conditioning units can be controlled: Emergency stop, ON/OFF operation, and Prohibit/Permit local remote controller operation.

(1) External signal input function setting

Setting mode	Description
[Demand (Level signal)/Not in use] (Factory setting)	Select this mode when inputting a demand level using a level signal, or when not using an external signal input function. A demand signal of four different levels will be input.
[Emergency Stop (Level signal)]	Using a level signal, all the air conditioning units connected to the AE-200E or AE-50E /EW-50E will be stopped collectively in an emergency. During an emergency stop, the ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the AE-200E or AE-50E/EW-50E will be prohibited. A demand signal of three different levels will be input.
[ON/OFF (Level signal)]	Using a level signal, all the air conditioning units connected to the AE-200E or AE-50E /EW-50E will be run or stopped collectively. The ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the AE-200E or AE-50E/EW-50E will be prohibited. Scheduled operations will not be performed.
[ON/OFF/Prohibit/Permit (Pulse signal)]	Using a pulse signal, all the air conditioning units connected to the AE-200E or AE-50E /EW-50E will be run or stopped collectively, or the operation from the local remote controllers will be prohibited or permitted collectively.

* General equipment connected via a DIDO controller (PAC-YG66DCA) cannot be collectively run or stopped by using the external signal input function unless [Emergency Stop (Level signal)] is selected and relevant switches on the DIDO controller are set.

* The external input function cannot be used on HWHP (CAHV) units.

(2) External signal input specifications

CN5	Lead wire from PAC-YG10HA-E	Demand (Level signal)	Emergency Stop (Level signal)	ON/OFF (Level signal)	ON/OFF/Prohibit/Permit (Pulse signal)
No. 5	Orange	Demand level 1	Emergency stop signal, Normal operation signal	ON signal, OFF signal	ON signal
No. 6	Yellow	Demand level 2	Demand level 2	–	OFF signal
No. 7	Blue	Demand level 3	Demand level 3	–	Prohibit signal
No. 8	Gray	Demand level 4	Demand level 4	–	Permit signal
No. 9	Red	External power supply (+12 or +24 VDC)			

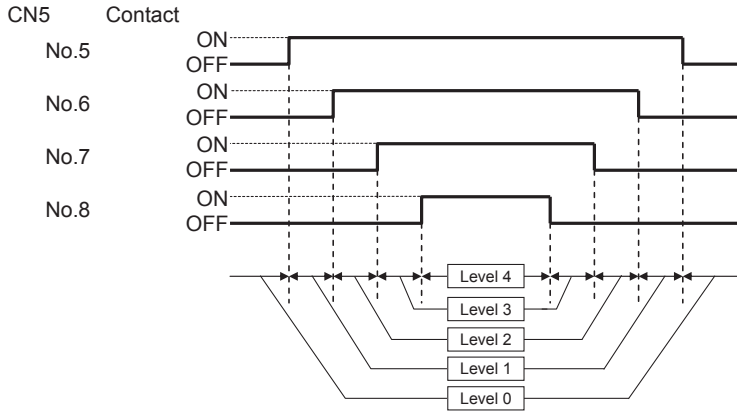

(3) Level signal and pulse signal

(A) Level signal

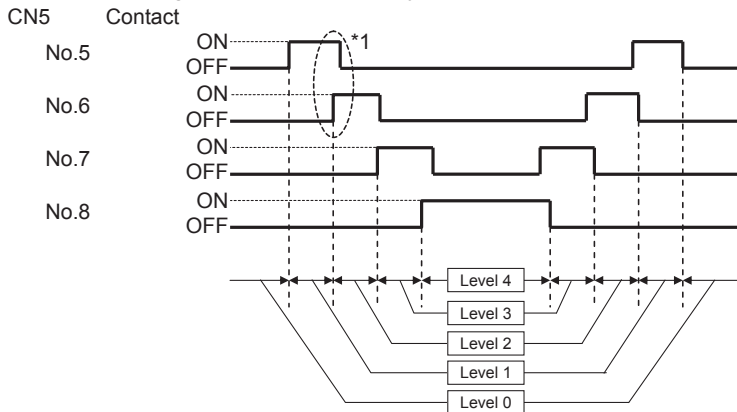

How the demand level is determined

Demand level signal specification: When higher levels' contacts turn on, lower levels' contacts also stay on.

Demand level signal specification: Only the current levels' contacts turn on.

*1 The specification must be followed in the following order: ① When the level changes, the contact of the level after the change turns on.; ② The contact of the level before the change turns off.

1. If [Emergency stop (Level signal)] is selected, the air conditioning units in normal operation will stop when the contact turns on. Even when the contact turns off, these units will remain stopped. They must be started up manually after the emergency stop is reset.
2. If [ON/OFF (Level signal)] is selected, the air conditioning units that are stopped will start operation when the contact turns on. Conversely, the units that are in operation will stop when the contact turns off.
3. Demand control is performed when the demand level contact turns on. If two different demand levels' contacts turn on at the same time, the demand control will be performed with the higher level demand. (Even if the demand control is not performed due to unexpected problems, Mitsubishi Electric will not be responsible for exceeding the maximum power demand.)

(B) Pulse signal

(Example) ON/OFF

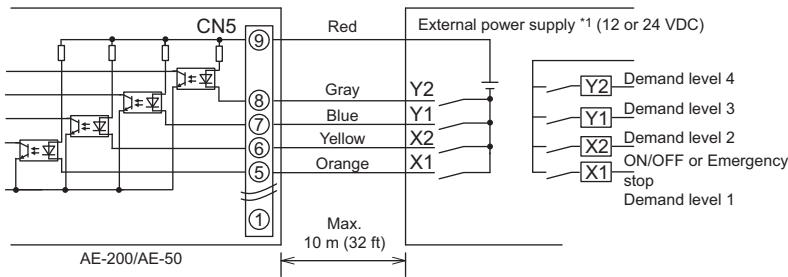

(Example) Prohibit/Permit

1. If the input pulse signal is the same as the current operation status of the air conditioning units, no status change will occur. (For example, if an ON signal is input while the air conditioning units are in operation, the units will continue their operation.)
2. If the operation from the local remote controller is prohibited, ON/OFF status, operation mode, or temperature setting cannot be changed and filter sign cannot be reset from the local remote controller.
3. The pulse width (contact ON) should be between 0.5 and 1.0 second.

(4) Recommended circuit

(A) Level signal

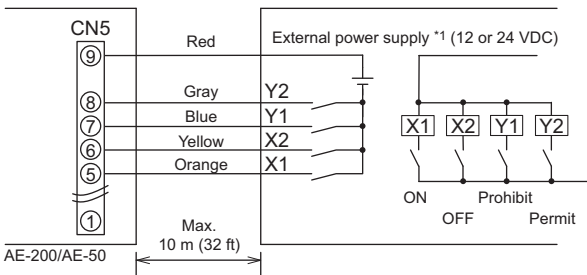

Use relays X1, X2, Y1, and Y2 that meet the following specifications.

Contact rating

- Rated voltage: 12 VDC or above
- Rated current: 0.1 A or above
- Minimum applied load: DC 1 mA

(B) Pulse signal

*1 Select an external power supply suitable for the relays used. (12 or 24 VDC)

Connect the external power supply in the correct polarity to input and output the signals.

Connect ⑤-⑧ (see the figure at left) to the negative side.

Important

- Be sure to use an external power supply (12 or 24 VDC) to avoid malfunctions.
- Connect the external power supply in the correct polarity to avoid malfunctions.

Note

- The relays, external power supply, and extension cables are not supplied.
- The total length of the lead wire and extension cable should not exceed 10 m (32 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Cut the excess cable near the connector, and insulate the end of the unused cable with tape.

[Pulse signal input function]

Using pulse signals directly input from metering device such as watt-hour meter, billing data and energy management data will be obtained based on the cumulative number of pulse signal input.

Note

- To input pulse signals directly from the metering device to the EW-50E, use the connector connected to the EW-50E. (Aprecision screwdriver for M1 screws is required.)

Usability of a built-in PI controller for each function

Function	AE-200E	AE-50E	EW-50E
Apportioned electricity billing function (option)	x*1	V*2	V*2
Energy management	V	V	V
Demand function (option)	V	V	V

(V): Usable, (x): Not usable

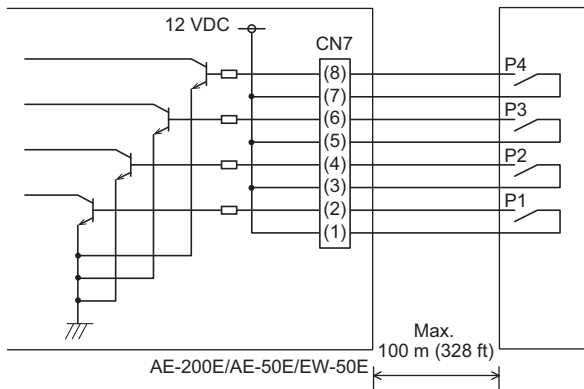

*1 A built-in PI controller on the AE-200E cannot be used for an apportioned electricity billing function. Use a built-in PI controller on the AE-50E or EW-50E.

*2 Using a PI controller (PAC-YG60MCA) is recommended instead of a built-in PI controller on the AE-50E/EW-50E when using an apportioned electricity billing function. (Discrepancies may occur between the built-in PI controller reading and the actual electric energy because the pulse input cannot be obtained during the AE-50E/EW-50E power failure, shutoff process, and software update.)

(1) Pulse signal input specifications

CN7	Signal
No. 7, 8	Metering device 4 (count input)
No. 5, 6	Metering device 3 (count input)
No. 3, 4	Metering device 2 (count input)
No. 1, 2	Metering device 1 (count input)

(2) Recommended circuit

A voltage of 12 VDC is applied to CN7. Do not apply a power voltage from any other power source.

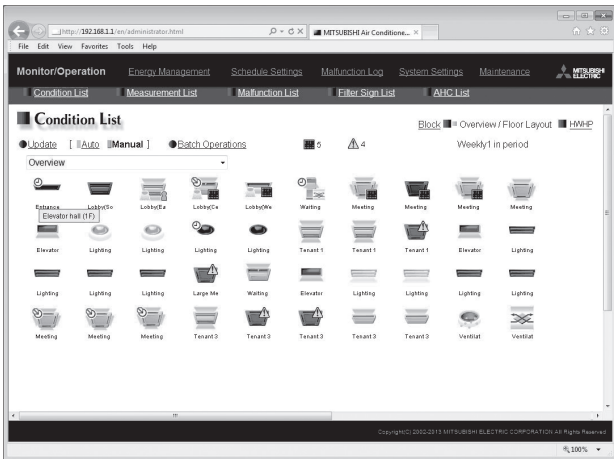

Contact rating

- Rated voltage: 12 VDC
- Rated current: 0.1 A or above
- Minimum applied load: DC 1 mA

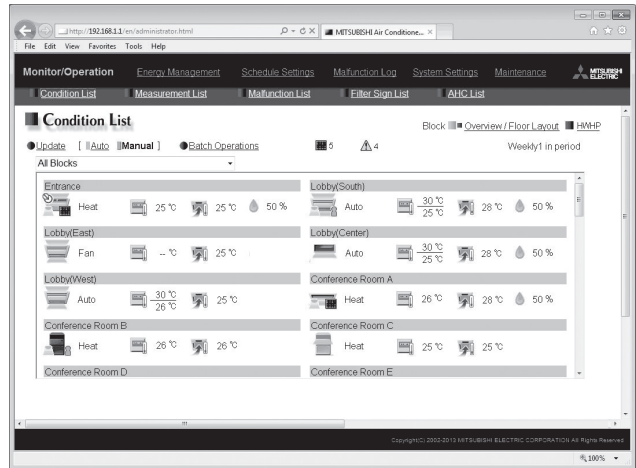

Note

- The total length of the lead wire and extension cable should not exceed 100 m (328 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Cut the excess cable near the connector, and insulate the end of the unused cable with tape.
- Do not run the signal input cable adjacent to the M-NET transmission and power cables. Do not let the cable form a loop.
- Peel off the sheath to 6 ±1 mm (4/16 ±1/16 in) from the end, and securely insert the cable into the terminal.
- Leave adequate slack in the cables so that the weight of them will not strain the terminal connectors. Use cable clamps or trunk terminals as necessary.

3-5. Centralized controller [AG-150A]

■ Functions

□: Each unit ○: Each group ●: Each block
 △: Each floor ⊙: Collective ×: Not available

Item	Description	Operations	Display
ON/OFF	ON and OFF operation for the air conditioner units	○ ⊙ △ ●	○ ⊙
Operation mode switching	Switches between Cool / Dry / Auto / Fan / Heat. (Group of LOSSNAY unit : automatic ventilation/ vent - heat interchange/ normal ventilation) Operation modes vary depending on the air conditioner unit. Auto mode is the City Multi R2 and WR2 series only.	○ ⊙ △ ●	○
Temperature setting	Range of temperature setting Cool/Dry : 19°C - 30°C (14°C - 30°C) / 67°F - 87°F (57°F - 87°F) Heat : 17°C - 28°C (17°C - 28°C) / 63°F - 83°F (63°F - 83°F) Auto : 19°C - 28°C (17°C - 28°C) / 67°F - 83°F (63°F - 83°F) ※ Range of temperature settings vary depending on model.	○ ⊙ △ ●	○
Sliding Temperature setting	This function shifts the preset temperature by the preset increment to reduce the temperature difference between the indoor and outdoor air temperatures during cooling operation. The maximum shifting temperature (+1°C, +2°C, +3°C, +4°C) can be set for each group.	○	○
Night setback setting	This function helps keep the indoor temperature in the temperature range while the units are stopped and during the time this function is effective.	○	○
Fan speed setting	Models with 5 air flow speed settings: Hi/Mid-1/Mid-2/Low, Auto Models with 4 air flow speed settings: Hi/Mid/Low, Auto Models with 2 air flow speed settings: Hi/Low Fan speed setting (including Auto) varies depending on the model.	○ ⊙ △ ●	○
Air flow direction setting	Air flow direction angles, 4-angle or 5-angle Swing, Auto ※1: Louver cannot be set. ※ Air flow direction settings vary depending on the model.	※1 ○ ⊙ △ ●	○
Schedule operation	Weekly schedule can be set for each group of air conditioning units. Optimal startup setting is also available. ※2 By registering a license for AG-150A, weekly (5 types), annual, and current day scheduling function become available. The system follows either the current day, annual schedule, or weekly, which are in the descending order of overriding priority. Twenty-four events can be scheduled per day, including ON/OFF, Mode, Temperature Setting, Operation Prohibition, Vane Direction, and Fan Speed. Five types of weekly schedule (Summer/Winter) can be set. Settable items depend on the functions that a given air conditioning unit supports.	※2 ○ ⊙ △ ●	○
Permit / Prohibit local operation	Individually prohibit operation of each local remote control function (ON/OFF, Change operation mode, Set temperature, Reset filter). ※3: When the local remote controller inactivation command is received from the master system controller, "Disabled" appears in inverted display on the operation setting screen.	○ ⊙ △ ●	※3 ○
Indoor unit intake temperature	Measures the intake temperature of the indoor unit only when the indoor unit is operating.	×	○
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. ※4: When an error occurs, the "ON/OFF" LED flashes. The operation monitor screen shows the abnormal unit by flashing it. The error monitor screen shows the abnormal unit address, error code and source of detection. The error log monitor screen shows the time and date, the abnormal unit address, error code and source of detection.	×	※4 □ ⊙
Test run	This operates air conditioner units in test run mode.	○ ⊙ △ ●	○
Ventilation equipment	The interlocked system settings can be performed by the master system controller. When setting the interlocked system, you can use the ventilation switch to switch the free plan LOSSNAY settings between "Hi", "Low" and "Stop". When setting a group of only free plan LOSSNAY units, you can switch between "Normal ventilation", "Interchange ventilation" and "Automatic ventilation". ※5 When setting ventilation interlock with Mr.Slim units, the air conditioning and interlocked ventilation icon will display ON even when the interlocked LOSSNAY is operating by itself. (This will occur when used with the following M-NET adapter: PAC-SF48/50/60/70/80/81MA-E)	○ ⊙ △ ●	※5 ○
External input/output	By using accessory cables you can set and monitor the following. Input: By level signal: "Batch ON/OFF", "Batch emergency stop" By pulse signal: "Batch ON/OFF", "Enable/disable local remote controller" Output: "ON/OFF", "Error/Normal" ※6: Requires an external I/O cable (PAC-YG10HA-E; sold separately) and a commercially available external power supply.	⊙ ※6	⊙ ※6

NOTE: Depending on the versions of AG-150A, some of the functions may not be available. The external input/output terminal on AG-150A becomes unavailable when AG-150A is connected to PAC-YG50ECA. Use the terminals on PAC-YG50ECA in that case.

- A. The centralized controller of AG-150A combines Web function (optional), which enable the air conditioner system management on a PC browser screen. *1 The management even carried out at a long distance place via public telephone line or internet.
 *1 Microsoft® Internet Explorer® Ver. 6 or later by Microsoft Corporation is needed. (As of December 2012, operation with Internet Explorer® Ver.6~9 are tested) (Note: You must have operating system which complies with "Oracle® Java™ Plug-in". When using Internet Explorer® (64 bit), use Java™ Plug-in (64bit.) Microsoft®, Internet Explorer® is a registered trade mark of Microsoft Corporation US in the USA and other countries. Oracle® and Java™ are trademarks or registered trademarks of Oracle Corporation in the United States and/or other countries.
 Note: Connect AG-150A to a private network. Use a security device such as a VPN router when connecting the AG-150A to the Internet to prevent unauthorized access.
- B. Together with integrated centralized control software TG-2000A, and/or PI, DIDO controller, many optional functions like "Charging", "Peak-cut", "Energy saving", "General equipment management", "Scheduling" etc, can be carried out. Details, please refer to sections of TG-2000A and/or PI, DIDO controller, PLC software.
 *AG-150A connected with PAC-YG50ECA cannot be connected to the PLC (PAC-YG21CDA).
- C. One AG-150A can control maximum 50 units (including LOSSNAY). Up to 150 units (including LOSSNAY) can be controlled from one AG-150A connected with three expansion controllers.
 The integrated centralized control software TG-2000A can manage maximum 2000 units (including LOSSNAY). For details, refer to TG-2000A page.
- D. Taking advantage of AG-150A's Web functions, alarming E-mail containing address and error code can be sent to appointed E-mail address upon any fault happen at the air conditioner system.
 This could release standby personnel and save operation cost.
- E. AG-150A features a 9"-wide color LCD touch panel. The settings for air conditioning units can be changed by touching the corresponding icons on the display.
- F. The interlock-control option enables interlocked operations of air conditioning unit groups and the general equipment groups, based on the changes of status in the ON/OFF, Mode, or Error signals.(Can be set from the Web browser only)

■ External dimension

1. Power supply to AG-150A

AG-150A needs DC power supply of 24V and M-NET (24~32V); the former is for centralized control transmission use and the latter is for AG-150A's operating and LAN function use.

- (1). Power supply unit PAC-SC51KUA is the recommended power supplier for AG-150A. The basic scheme is as follows. For details, please refer to Power supply unit PAC-SC51KUA.

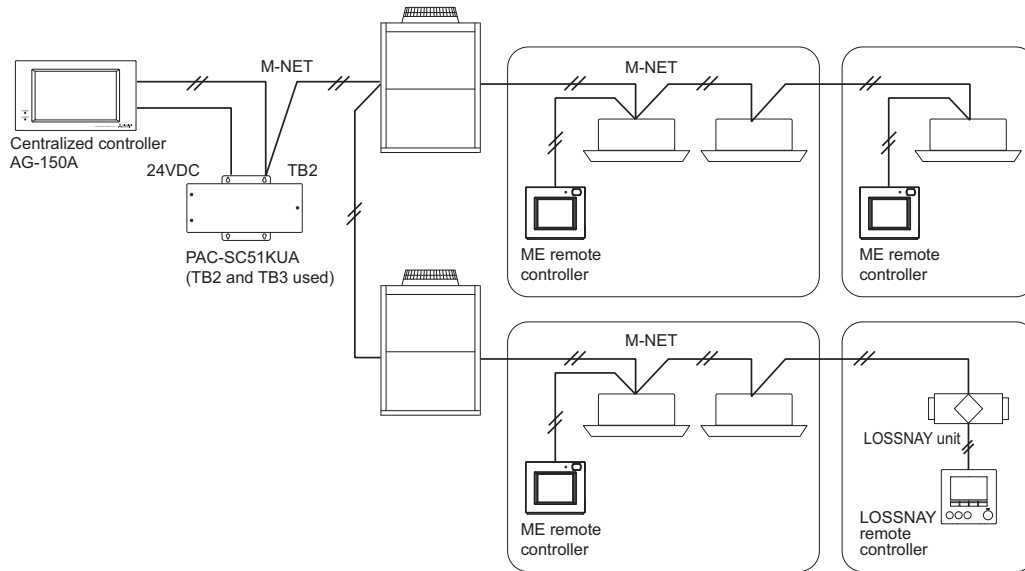

Fig. 1 AG-150A and PAC-SC51KUA basic scheme.

NOTE: For information about AG-150A connected with the expansion controller, refer to the following section(s):
3-8. Expansion Controller [PAC-YG50ECA]

2. External input/output usage

NOTE : When using the AG-150A connected with the expansion controller, use external input/output function of the expansion controller.

(1). External signal input function

※To use the external signal input, an external I/O adapter (PAC-YG10HA-E; sold separately) and an external power supply are required.

1). External input

Emergency stop/normal, ON/OFF and prohibit/permit of local remote controller operation can be controlled for all air conditioners being controlled by using a voltage (12VDC or 24VDC) contact signal from an external source.
(Select with the function select setting.)

No	Function name	External signal input function	Remarks
1	Not in use	Do not use external input signal (factory setting)	_____
2	Emergency stop (Level signal)	Execute emergency stop/normal with level signal	The local remote controller ON/OFF operations, and the controller ON/OFF operation and prohibit/permit change operations will be prohibited during emergency stop. Timer operation will also be prohibited.
3	ON/OFF (Level signal)	Perform ON/OFF with level signal	The local remote controller ON/OFF operations, and the controller ON/OFF operations and prohibit/permit change operations will be prohibited. Timer operation will also be prohibited.
4	ON/OFF prohibit/permit (Pulse signal)	Perform ON/OFF, prohibit/permit with pulse signals.	Set the pulse width while the contact is ON to 0.5 to 1 sec.

* DIDO controller (PAC-YG66DCA) cannot be collectively run or stopped by using the external input function. But when [Emergency stop (Level signal)] is selected, DIDO controller (PAC-YG66DCA) can be collectively stopped by setting the appropriate switches on the DIDO controller.

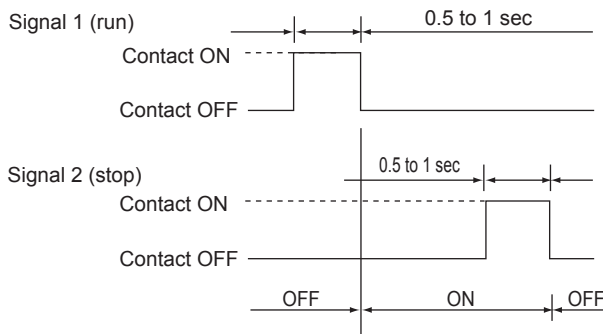

2). Level signal and pulse signal (12VDC or 24VDC)

(A) Level signal

(B) Pulse signal

(Example) for ON/OFF

*The prohibit/permit input is the same.

3). External input specifications

CN5	Lead wire	Emergency stop/normal level signal	ON/OFF, level signal	ON/OFF, prohibit/enable pulse signal
No.5	Orange	Emergency stop/normal input	ON/OFF input	ON input
No.6	Yellow	Not used	Not used	OFF input
No.7	Blue	Not used	Not used	Local remote controller operation prohibit input
No.8	Gray	Not used	Not used	Local remote controller operation enable input
No.9	Red	External DC source "+ 12VDC" or "+ 24VDC"		

(A) For level signal

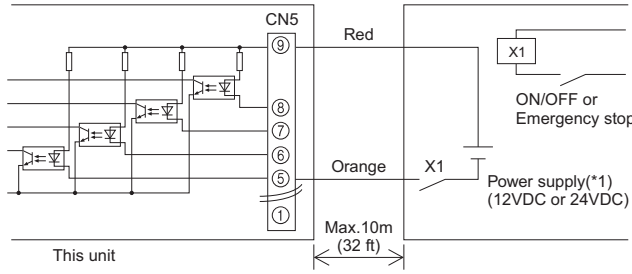

- ① When the emergency stop/normal signal is selected, the status will change from normal to emergency stop when the external input signal contact changes from OFF to ON, and will change from emergency stop to normal when the contact changes from ON to OFF. Air conditioning units that came to an emergency stop will remain stopped after the emergency stop is cancelled. Manually start up each unit to restore the previous operation.
- ② When the ON/OFF signal is selected, the status will change from OFF to ON when the external input signal contact changes from OFF to ON, and will change from ON to OFF when the contact changes from ON to OFF.

(B) For pulse signal

- ① Even if the ON signal is input during ON, the status will remain ON.
- ② If the local remote controller is prohibited, the ON/OFF operation mode and temperature setting operations by the local remote controller will be prohibited.
- ③ Set the pulse width (contact ON time) to 0.5 to 1 sec.

4). Recommended circuit example

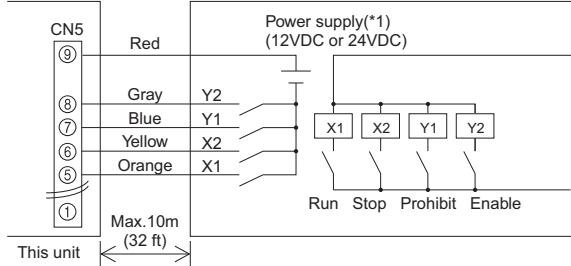

(A) For level signal

Use relays X1, X2, Y1, and Y2 that meet the following specifications.

- Contact rating
- Rated voltage $\geq 12\text{VDC}$
- Rated current $\geq 0.1\text{A}$
- Minimum applicable load $\leq 1\text{mA at DC}$

(B) For pulse signal

- ① The contact relay, DC power source, extension cable, etc., must be prepared separately at the site.
- ② The connection cable can be extended up to 10m (32 ft). (Use a 0.3mm² (AWG 22) or larger wire.)
- ③ Strip the extra cable near the connector, and securely insulate the exposed section with tape, etc.

(2). External signal output function

* To use the external signal input, an external I/O adapter (PAC-YG10HA-E; sold separately) and an external power supply are required.

1). External output

When one or more air conditioners are running, the " ON " signal will be output and if a malfunction occurs in one or more air conditioners, the " Malfunction " signal will be output.

2). External output specifications

CN5	Lead wire	Details of each terminal
No.1	Green	Common (External ground)
No.2	Black	ON/OFF*
No.3	Brown	Malfunction/normal

① The " ON " signal is output even while the " Malfunction " signal is being output.

- * The operation status of DIDO controller is not output.
- * Operation signal is output during an error.

3). Recommended circuit example

Use Z1 and Z2 relays that meet the following specifications.

- Operation coil
- Rated voltage : 12VDC, 24VDC
- Power Consumption: 0.9W or less
- (*1) Prepare a power supply separately according to the relay being used. (12VDC or 24VDC)
- (*2) Always insert a diode on both ends of the relay coil.

- ① Each element will turn on while ON operation or a malfunction occurs.
- ② The connection cable can be extended up to 10m (32 ft).
- ③ The relays, lamps, diodes and extension cables, etc, must be prepared separately at the site.

NOTE

* When connecting the external input/output cables to connector CN5 on the controller, punch out the knockout hole.

3. LAN connection function

When using the LAN connection function, connect the LAN cable to the LAN connector of this device.

- * Procure the LAN cable at the site, and use 100 BASE-TX Straight cable.
- * For a description of the IP address setting method, refer to Instruction Book.
- * LAN is 100 BASE-TX Specification.

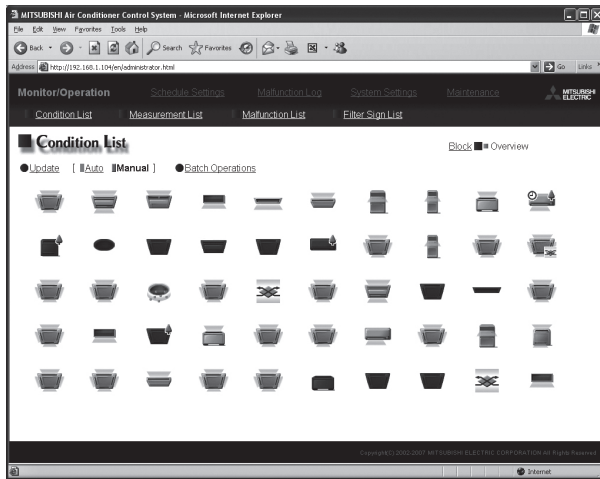

NOTE

- * Perform the LAN wiring before installation, and wire up to the body by the same method as wiring the M-NET transmission line.
- * When a LAN is already connected, decide the IP address by consultation with the system administrator and connect to the LAN body after changing the IP address.
- * Connect AG-150A to a private network.

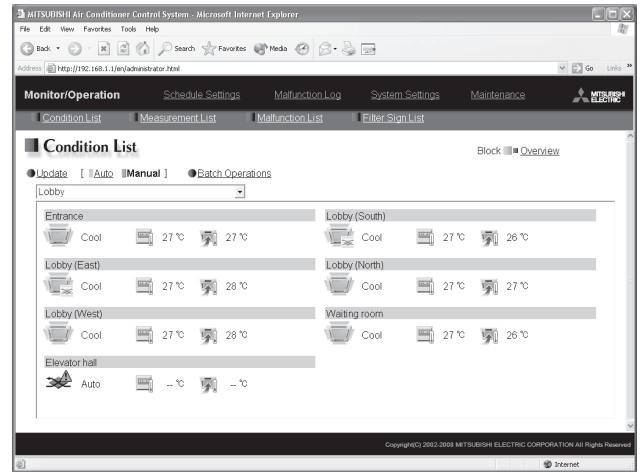

Use a security device such as a VPN router when connecting the AG-150A to the Internet to prevent unauthorized access.

(If no security devices are installed, the operation settings may be changed by an unauthorized person without the knowledge of the user.)

3-6. Centralized controller [EB-50GU-J]

*EB-50GU-J is indicated as EB-50GU.

Dual Set Point

■ Functions

□:Each unit ○:Each group ●:Each block
 △:Each floor ◎:Collective ×:Not available

- A. The use of EB-50GU combined with AHC will allow the use of external signal, making it possible to use integrated control of air conditioning systems including third-party HVAC products.
- B. The centralized controller of EB-50GU combines Web function, which enable the air conditioner system management on a PC browser screen. *1. The management can even be carried out remotely.
 - Microsoft® Internet Explorer 8.0
 - Microsoft® Internet Explorer 9.0
 - * Java™ execution environment is required. (Oracle® Java™ Plug-in Ver. 1.7.0_11)
 - * Install Oracle® Java™ Plug-in that is appropriate for your operating system. When using a 64-bit Internet Explorer, install a 64-bit Java™ Plug-in.
 - * The version of the Oracle® Java™ Plug-in can be verified by clicking [Java™] in the Control Panel.
- Note: Connect EB-50GU to a private network. Use a security device such as a VPN router when connecting the EB-50GU to Internet to prevent unauthorized access.
- C. One EB-50GU can control a maximum of 50 Indoor units (including LOSSNAY). The integrated centralized control software TG-2000A (*2) can manages maximum of 40 EB-50GU's and maximum of 2000 units (including LOSSNAY).
 - *2 TG-2000A Ver.6.40 or later is required to control EB-50GU.
- D. Taking advantage of EB-50GU's Web functions, alarm E-mail containing address and error code can be sent to appointed E-mail address upon any fault occurring at the air conditioner system. This could release standby personnel and save operation costs.
- E. Together with integrated centralized control software TG-2000A, and/or other controllers (DIDO, AI, PI controller), many optional functions like "Charging", "Peak-cut", "Energy saving" etc, can be carried out.

Item	Description	Operations	Display
ON/OFF	Run and stop operation for the air conditioner units	○ ● ◎	○ ◎
Operation mode switching	The switch operation for the operation mode setting can be performed as a collective, per group, or per block. (Available modes depend on the model of indoor units or outdoor unit.) [Selectable operation mode for the indoor unit] COOL/DRY/FAN/AUTO/HEAT [Selectable operation mode for the independent ventilation] HEAT RECOVERY/BY-PASS/AUTO [Selectable operation mode for AIR TO WATER(PWFY)] HEATING/HEATING ECO/HOT WATER/ANTI-FREEZE/COOLING.	○ ● ◎	○
Fan speed setting	Models with 5 air flow speed settings: Hi/Mid-1/Mid-2/Low, Auto Models with 4 air flow speed settings: Hi/Mid/Low, Auto Models with 2 air flow speed settings: Hi/Low *Fan speed settings vary depending on the model.	○ ● ◎	○
Air flow direction setting	Air flow direction angles, 4-angle or 5-angle, Swing, Auto *1: Louver cannot be set. *Air flow direction settings vary depending on the model.	*1 ○ ● ◎	○
Ventilation equipment	The interlocked system settings can be performed by the master system controller. When setting the interlocked system, you can use the ventilation switch to switch the free plan LOSSNAY settings between "Hi", "Low" and "Stop". When setting a group of only free plan LOSSNAY units, you can switch between "Normal ventilation", "Interchange ventilation" and "Automatic ventilation".	○	○
Temperature setting	The temperature can be set within the following range. Cool/Drying: 19°C - 35°C/67°F - 95°F Heat: 4.5°C - 28°C/40°F - 83°F Auto (single set point): /19°C - 28°C/67°F - 83°F Auto (dual set points) [Cool]Same as the set temp. range for Cool mode. [Heat]Same as the set temp. range for Heat mode. *The settable temperature ranges and items vary depending on the indoor and outdoor unit models.	○ ● ◎	○
Temp range limit settings	Sets the temperature range for the local remote controllers. *2: The item and range that can be operated or monitored depend on the function of the indoor unit.	*2 ○	○
External Temperature Interlock	This function shifts the preset temperature by the preset increment to reduce the temperature difference between the indoor and outdoor air temperatures during cooling or heating operation. The maximum shifting temperature(±1°C, ±2°C, ±3°C, ±4°C) can be set for each group.	○	○
Schedule operation	Annual/Weekly (5 types)/Today schedule can be set for each group of air conditioning units. Optimized start setting is also available. *3: The system follows either the current day, annual schedule, or weekly, which are in the descending order of overriding priority. Twenty-four events can be scheduled per day, including ON/OFF, Mode, Temperature Setting, Vane Direction, Fan Speed, and Operation Prohibition. Five types of weekly schedule(Summer/Winter/etc.) can be set. Settable items depend on the functions that a given air conditioning unit supports.	*3 ○ ● ◎	○
Night setback setting	The function keeps the indoor temperature in a set temperature range once the unit off and during the time this function is effective.	○	○
Permit / Prohibit local operation	Individually prohibit operation of each local remote control function (ON/OFF, Change operation mode, Set temperature, Reset filter sign, Air Direction, Fan speed, Timer). *4: The settable items vary depending on the models.	○ ● ◎	*4 ○
Indoor unit intake temperature	Measures the intake temperature of the indoor unit. *7: Displays the ambient temperature of either the return air temperature sensor on the indoor unit or the temperature sensor on the remote controller, whichever is selected on the indoor temperature display mode selection.	×	*7 ○
AHC status	Displays the status of input and output ports of each Advanced HVAC CONTROLLER (AHC).	×	□
Free Contact status	Displays the input/output status of the free contacts on the indoor units.	×	□
Measurement	Displays the temperature, humidity, and the reading of the watt-hour meter.	×	□
Outdoor Unit Status Monitor	Monitor the current outdoor unit status Data: Frequency (Compressor), high/low pressure (outdoor unit)	×	□
Energy Use Status	On the Energy Use Status screen, the energy-control-related status, such as electric energy consumption, operation time, and outdoor temperature, can be displayed in a graph. Operators can check the detailed status of given indoor units by specifying the date to display the data per group, block, or unit address.	×	□ ○ ●
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. *5: The operation monitor screen shows the abnormal unit by flashing it. The error monitor screen shows the abnormal unit address, error code and source of detection. The error log monitor screen shows the time and date, the abnormal unit address, error code and source of detection.	×	*5 □
Filter sign reset/ Filter sign	Filter sign can be reset for each group or block of indoor units. Filter sign indicates that the filter on the units in a given group is due for cleaning.	□ ○ ●	□ ○ ●
Interlock setting	Operation of indoor groups or general equipment can be interlocked by the change of state (ON/OFF, mode, error of indoor groups and general equipment). (EB-50GU will execute interlocking control depending on the interlocked setting.)	○	○
Test run	This operates air conditioner units in test run mode.	○ ○ △ ●	○
External input/output	By using accessory cables you can set the following. Input: By level signal: "Batch run/stop", "Batch emergency stop" By pulse signal: "Batch run/stop", "Enable/disable local remote controller" *6: Requires the external I/O cable (PAC-YG10HA-E) sold separately and external power supply.	*6 ◎	×
	By using accessory cables you can monitor the following. Output: "Run/stop", "Error/Normal" *6: Requires the external I/O cable (PAC-YG10HA-E) sold separately and external power supply.	×	*6 ◎
M-NET	The "M-NET" LED lights, when M-NET power supply is turned ON. The LED blinks during M-NET communication.	×	◎ (LED)
Collective ON/OFF	All units can operate / stop with the switch. (For test run)	◎	—
Data back-up (PC)	The initial setting data, operation data (charge parameter, power consumption data) can be stored in the PC.	◎	—

Note: EB-50GU can control up to 50 units. EB-50GU is not connectable with PAC-YG50ECA. Available functions vary depending on the models of connected indoor units, outdoor units, and remote controllers.

Java™ is a registered trademark of Oracle and/or its affiliates.

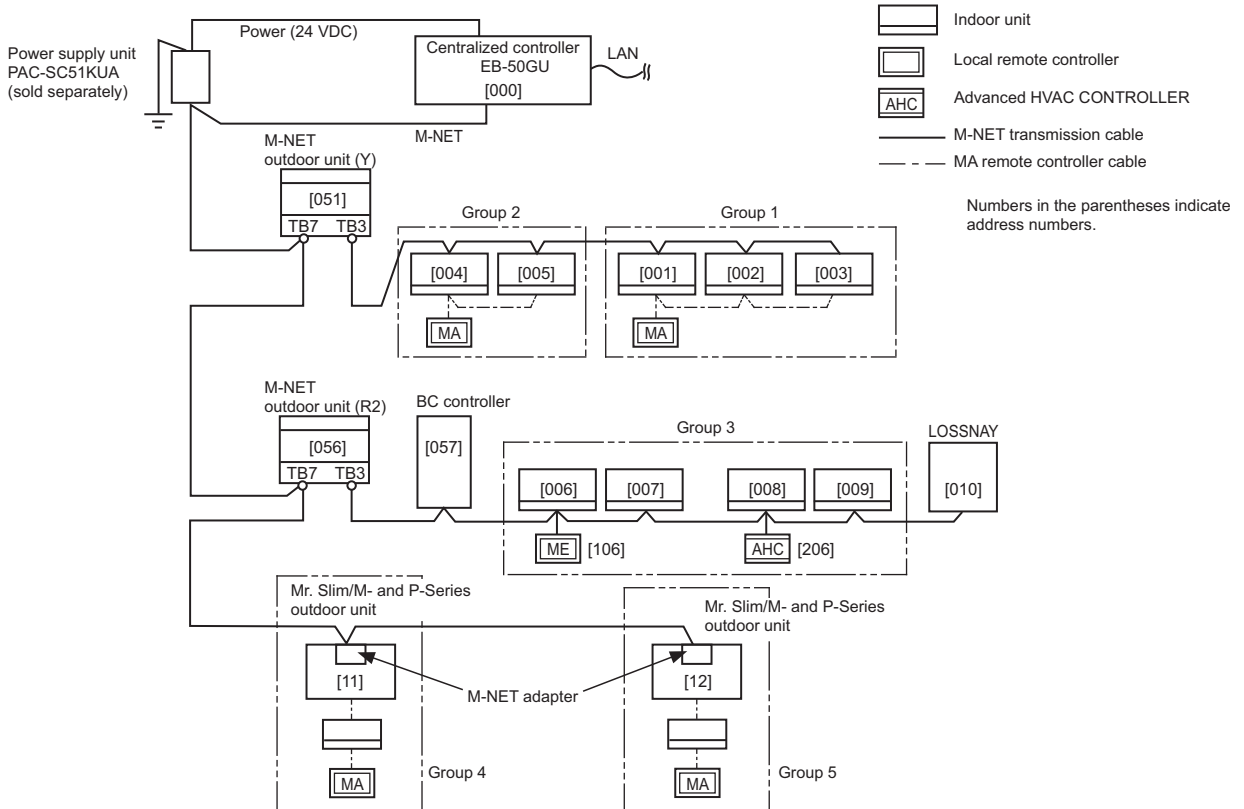

External dimension

1. Power supply to EB-50GU

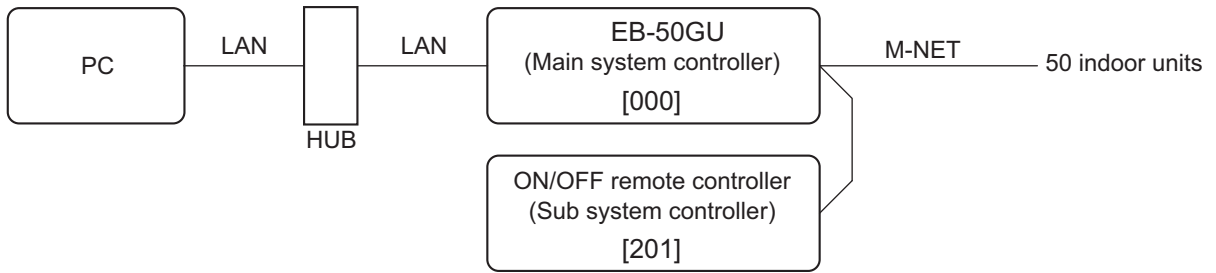

EB-50GU needs DC power supply of 24V and M-NET (24~32V); the former is for EB-50GU's operating and LAN function use and the latter is for centralized control transmission use.

- (1) Power supply unit PAC-SC51KUA is required for EB-50GU. The basic scheme is as follows. For details, please refer to Power supply unit PAC-SC51KUA.

2. M-NET system setting example

(1) Setting example for connecting multiple M-NET system controllers

- Make the initial settings such as group settings and interlock settings on the Web browser. Refer to the Instruction Book (Web Browser for Initial Settings) for details.
- Designate a system controller within the system as the only controller from which operation prohibit setting can be made.

(2) Setting example for controlling Mr. Slim units (M-series/P-series models)

- An M-NET adapter (sold separately) is required to connect the Mr. Slim model of units to the M-NET.

3. External input/output

To use external input/output, a separately-sold external input/output adapter (PAC-YG10HA-E) and external power supply (12 or 24 VDC) are required.

[External signal input function]

Using external contact signals (12 or 24 VDC), the following collective operations for all connected air conditioning units can be controlled: Emergency stop, ON/OFF operation, and Prohibit/Permit local remote controller operation.

(1) External signal input function setting

Setting mode	Description
Not in use (Factory setting)	External input signal will not be used.
Emergency Stop (Level signal)	Using a level signal, all the air conditioning units connected to the EB-50GU will be stopped collectively in emergency. During an emergency stop, the ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the EB-50GU will be prohibited. Scheduled operations will not be performed.
ON/OFF (Level signal)	Using a level signal, all the air conditioning units connected to the EB-50GU will be run or stopped collectively. The ON/OFF operation from the local remote controllers will be prohibited, and the ON/OFF operation and Prohibit/Permit settings on the EB-50GU will be prohibited. Scheduled operations will not be performed.
ON/OFF/Prohibit/Permit (Pulse signal)	Using a pulse signal, all the air conditioning units connected to the EB-50GU will be run or stopped collectively, or the operation from the local remote controllers will be prohibited or permitted collectively.

* General equipments connected via DIDO controller (PAC-YG66DCA) cannot be collectively run or stopped by using the external signal input function unless [Emergency Stop (Level signal)] is selected and relevant switches on the DIDO controller are set.

(2) External signal input specifications

CN5	Lead wire from PAC-YG10HA-E	Emergency Stop (Level signal)	ON/OFF (Level signal)	ON/OFF/Prohibit/Permit (Pulse signal)
No. 5	Orange	Emergency stop signal, Normal operation signal	ON signal, OFF signal	ON signal
No. 6	Yellow	—	—	OFF signal
No. 7	Blue	—	—	Prohibit signal
No. 8	Gray	—	—	Permit signal
No. 9	Red	External power supply (+12 or +24 VDC)		

(3) Level signal and pulse signal

(A) Level signal

- 1) If "Emergency stop (Level signal)" is selected, the air conditioning units in normal operation will stop when the contact turns on. Even when the contact turns off, these units will remain stopped. They must be started up manually after the emergency stop is reset.
- 2) If "ON/OFF (Level signal)" is selected, the air conditioning units that are stopped will start operation when the contact turns on. Conversely, the units that are in operation will stop when the contact turns off.

(B) Pulse signal

(Example) ON/OFF

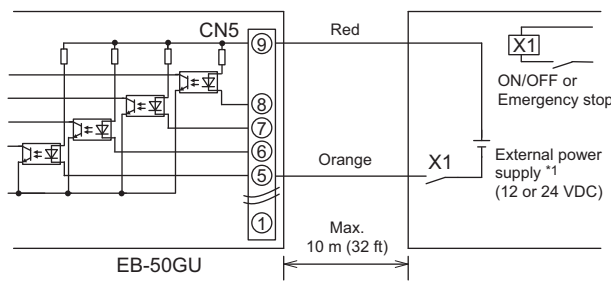

(Example) Prohibit/Permit

- 1) If input pulse signal is the same as the current operation status of the air conditioning units, no status change will occur. (For example, if an ON signal is input while the air conditioning units are in operation, the units will continue their operation.)
- 2) If the operation from the local remote controller is prohibited, ON/OFF status, operation mode, or temperature setting cannot be changed and filter sign cannot be reset from the local remote controller.
- 3) The pulse width (contact ON) should be between 0.5 and 1.0 second.

(4) Recommended circuit

(A) Level signal

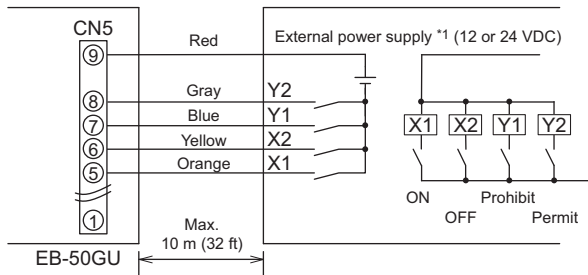

Use relays X1, X2, Y1, and Y2 that meet the following specifications.

- Contact rating
 Rated voltage: 12 VDC or above
 Rated current: 0.1 A or above
 Minimum applied load: DC 1 mA

*1 Select an external power supply suitable for the relays used. (12 or 24 VDC)
 Connect the external power supply in the correct polarity to input and output the signals.
 Connect ⑤ – ⑧ (see the figure at left) to the negative side.

(B) Pulse signal

Important

- Be sure to use an external power supply (12 or 24 VDC) to avoid malfunctions.
- Connect the external power supply in the correct polarity to avoid malfunctions.

Note

- The relays, external power supply, and extension cables are field supplied.
- The total length of the lead wire and extension cable should not exceed 10 m (32 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Cut the excess cable near the connector, and insulate the end of unused cable with tape.

[External signal output function]

An ON signal is output when one or more units are in operation, and Error signal is output when one or more units are in error.

(1) External signal output specifications

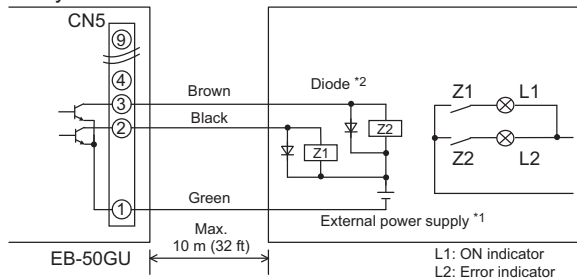

CN5	Lead wire from PAC-YG10HA-E	Signal
No. 1	Green	Common ground for external output (Ground for external power supply)
No. 2	Black	ON signal*, OFF signal
No. 3	Brown	Error signal, Normal signal

* The operation status of general equipments (via DIDO controller (PAC-YG66DCA)) will not be output.

* The ON signal will be output even during an error.

(2) Recommended circuit

Relay-driven circuit

Use relays Z1 and Z2 that meet the following specifications.

- Operation coil
 Rated voltage: 12 or 24 VDC
 Power consumption: Max. 0.9 W

*1 Select an external power supply suitable for the relays used. (12 or 24 VDC)
 Connect the external power supply in the correct polarity to input and output the signals.
 Connect ① (shown in the figure at left) to the negative side.
 *2 Use a diode at both ends of the relay coils.

Important

- Be sure to use an external power supply (12 or 24VDC) to avoid malfunctions.
- Connect the external power supply in the correct polarity to avoid malfunctions.
- Do not connect the external power supply without relays being connected to the controller (no load).

Note

- The relays, lamps, external power supply, diodes, and extension cables are field supplied.
- The total length of the lead wire and extension cable should not exceed 10 m (32 ft). (Use an extension cable of 0.3 mm² or thicker.)
- Each element will turn on during operation and when an error occurs.

4. Connecting LAN cable

Connect the LAN cable to the LAN port on the EB-50GU.

- The LAN cable is field supplied. Use a category 5 or above straight LAN cable.
- Use a switching HUB.
- The maximum distance between the switching HUB and EB-50GU is 100 m (328 ft).

Note

- LAN must be installed before the unit installation. Route the LAN cable to the EB-50GU in the same way as the M-NET transmission cables.
- Leave enough space around the LAN port on the EB-50GU to allow for the connection of the cables. Refer to Installation and Instructions Manual.
- When connecting the EB-50GU to an existing LAN, consult the system administrator to decide the IP address. The IP address can be changed with the dipswitch or from the Web browser.
- To prevent unauthorized access, always use a security device such as a VPN router when connecting the EB-50GU to the Internet.

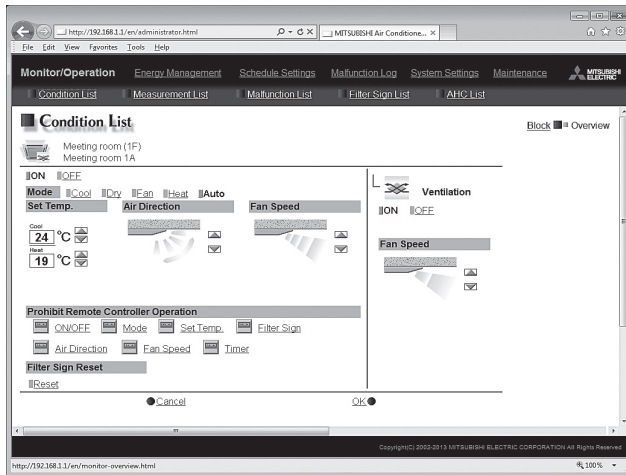

5. Browser screens of EB-50GU

Energy Management monitor (Energy use status)

Energy Management monitor (Ranking)

3-7. Power supply unit [PAC-SC51KUA]

PAC-SC51KUA supplies DC power of M-NET (23-32V) and 24V at TB2 and TB3 respectively; the former is for centralized transmission use and the latter is for AG-150A operation and LAN function use.

1. When using PAC-SC51KUA as the power supplier for system controller, the capacity for system controller is considered as follows.

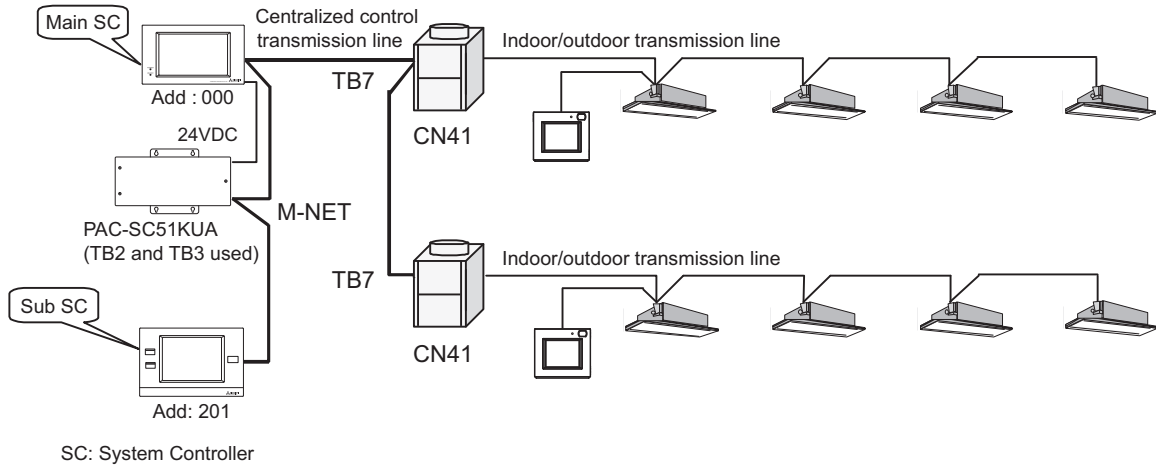

Fig. 1 Equivalent power consumption of controllers

In this case, pay attention to leave the power supply switch connector on CN41 of the Outdoor unit as the factory setting before shipment.

Taking the power consumption of the control board of Indoor unit as 1, the power consumption of various controllers is rated at Table 1.

Table 1 Equivalent power consumption of controllers

Centralized controller		System controller		M-NET remote controller
AG-150A	AE-200E AE-50E	Advanced touch controller (AT-50B)	ON/OFF remote controller (PAC-YT40ANRA)	ME remote controller (PAR-U02MEDA)
0.5	0	4	1	0.5

PAC-SC51KUA is capable to supply equivalent power up to 5, therefore the maximum connectable number of system controller is as follows.

Table 2 Max. connectable quantity of controller when using PAC-SC51KUA

Centralized controller*1	System controller		M-NET remote controller
AG-150A	Advanced touch controller (AT-50B)	ON/OFF remote controller (PAC-YT40ANRA)	ME remote controller (PAR-U02MEDA)
1unit	1unit	5 units	10 units

*1: According to the system restrictions, PAC-SC51KUA can be connected to only one centralized controller.

As the air conditioner control system may combine all kinds of system controllers, the total power consumption of system controllers need to count with Table 2.

For example, the controller system contains 1 AG-150A and 2 ON/OFF remote controllers (PAC-YT40ANRA) connected at centralized control communication line.

Then the total power consumption is

$$1 \times 0.5 + 2 \times 1 = 2.5 < 5.$$

One PAC-SC51KUA is therefore enough. The total power consumption should not exceed 5.

CAUTION

● When applying Charge and/or Peak-cut function on AG-150A, Power Supply Unit (PAC-SC51KUA) is recommended to use. AG-150A is possible to receive power from one of the Outdoor units, but there is a risk that the failure of power supply from the Outdoor unit will cause AG-150A's functiondown on the whole system.

3-8. Expansion Controller [PAC-YG50ECA]

- PAC-YG50ECA can enhance units that AG-150A can control up to 150 by connecting 3 Expansion Controller (PAC-YG50ECA).
- PAC-YG50ECA has a built-in function to supply power to the M-NET transmission line. (power supply coefficient:6)

1.Specifications

Items		Specifications	
Power source	Rated input	100-240VAC ±10% 0.4-0.3A 50/60Hz	
	Fuse	250VAC 3.15A Time-delay Type (IEC127-2.S.S.5)	
Interface	Rated output of the power supply to M-NET transmission lines	22-30VDC	
	External input/output	12VDC or 24VDC (requires an external power supply)	
	LAN	100BASE-TX/10BASE-T	
Ambient conditions	Temperature	Operating temperature range	-10~55°C [14~131°F]
		Storage temperature range	-20~60°C [-4~140°F]
	Humidity		30~90%RH (Non-condensing)
Dimensions		217 (H) × 250 (W) × 97.2 (D) mm [8-9/16(H) × 9-7/8(W) × 3-7/8(D)in.]	
Weight		2.6kg [5-3/4lbs.]	
Installation conditions		Inside the metal control board (indoor)	

2.External dimensions

3.M-NET power supply

PAC-YG50ECA has a built-in function to supply power to the M-NET transmission line. (power supply coefficient:6)
 When power is supplied from PAC-YG50ECA , the types of system controllers listed in the table below are connectable.

	System controller		M-NET remote controller
	Advanced touch controller	ON/OFF remote controller	ME remote Controller
Power consumption coefficient	4	1	0.5
Connectable units	1 unit	6 units	12 units

Note:

- When connecting BAC-HD150 (BM ADAPTER) to the same M-NET system, certain restrictions apply. Consult your dealer for details.
- Supplying power from the Outdoor unit or the power supply unit, it is necessary to replace power supply switch connector CN40 with CN41. (Factory default is CN40.)

4.Functions

Item	Description	Operations	Display
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed. When an error occurs, the "Error" LED turns ON.	×	○
External input/output	By using accessory cables you can set the following. Input: By level signal: "Batch start/stop", "Batch emergency stop" By pulse signal: "Batch start/stop", "Enable/disable local remote controller"	○*1*2	×
	By using accessory cables you can monitor the following. Output: "Start/stop"*3, "Error/Normal"	×	○*1
M-NET	The "M-NET" LED lights, when M-NET power supply is turned ON. The LED blinks while M-NET communicating.	×	○

[Symbol ○:enable ×:disable]

*1: Requires an external I/O cable (Model: PAC-YG10HA-E; sold separately) and an external power supply.

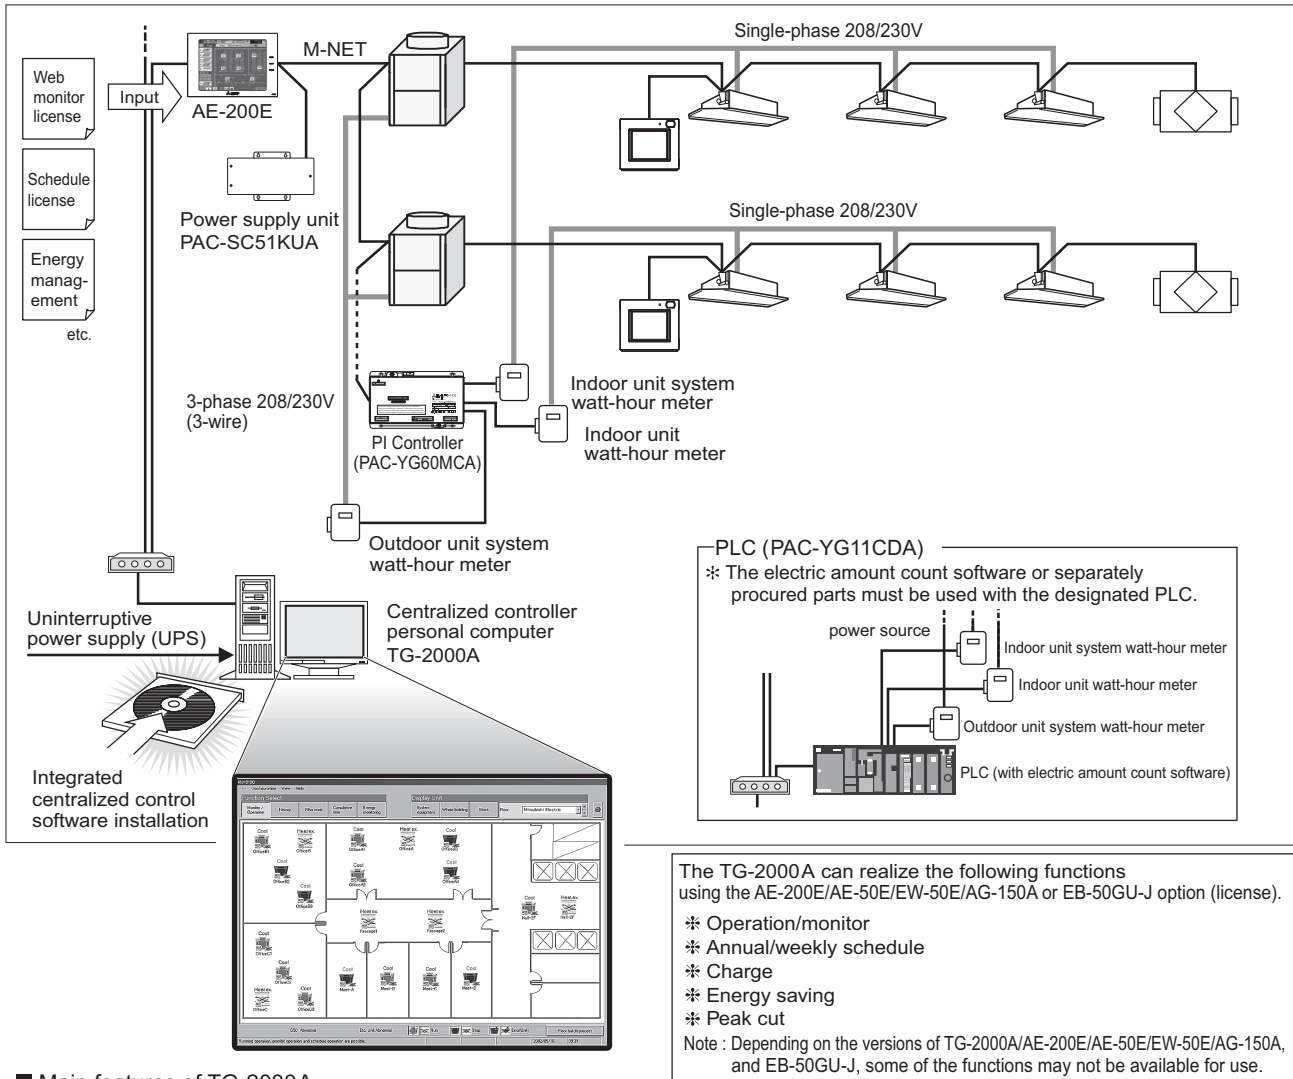

*2: DIDO controller (PAC-YG66DCA) cannot be "Batch start/stop" and "Batch emergency stop" by using the external input function.
 But when "Batch emergency stop" is selected, DIDO controller (PAC-YG66DCA) can be collectively stopped by setting the appropriate switch on the DIDO controller.

*3: The operation status of DIDO controller is not output.
 Operation signal is output during an error.

3-9. Integrated centralized control software [TG-2000A]

1. Example of Basic System Configuration.

Dual Set Point

The TG-2000A can realize the following functions using the AE-200E/AE-50E/EW-50E/AG-150A or EB-50GU-J option (license).

- * Operation/monitor
- * Annual/weekly schedule
- * Charge
- * Energy saving
- * Peak cut

Note : Depending on the versions of TG-2000A/AE-200E/AE-50E/EW-50E/AG-150A, and EB-50GU-J, some of the functions may not be available for use.

■ Main features of TG-2000A

- ① Up to 2000 units (40 AE-200E*5/AE-50E*5/EW-50E*6/AG-150A*3 or EB-50GU-J*4 units) can be operated and monitored simultaneously.
- ② The air-conditioner layout can be displayed on the screen, making control and operation easier.
- ③ The annual and weekly schedules can be set. 5 schedules, such as the summer master and winter master, can be saved in the weekly schedule.
- ④ Air-conditioning charges can be calculated based on the multiple air-conditioner usage results. The power apportionment percentage data and apportioned power rate can be calculated for each indoor unit using the power apportionment function, and can be output as a CSV format file. * Power apportionment charging is not possible with the old model, A control or K control.
 - Charging without WHM*1 : The user manually inputs the power rate to calculate the air-conditioning charges. (Using a tool)
 - PI controller + pulse WHM charging*1 : The pulse output WHM value is automatically tabulated by the PI controller (PAC-YG60MCA) to calculate the air conditioning charges.
 - PLC + pulse WHM charging*1 : The pulse output WHM value is automatically tabulated by the PLC to calculate the air-conditioning charges.
- ⑤ Energy saving operation is possible using the "ON/OFF", "set temperature change", "fan operation changeover" and "performance save operation (60% to 90%)" functions. Energy saving operation matching the amount of power in use is possible by using the PI controller or PLC's electric amount count software.
- ⑥ Night Set-Back function operation is possible with schedule settings.*2
- ⑦ General equipment can be operated and monitored.
- ⑧ General equipment can be schedule-controlled when using PAC-YG21CDA with PLC or DIDO Controller (PAC-YG66DCA). (For details of PLC refer to Installation Manual of PAC-YG21CDA.)

*1: Only one of these functions can be used.
 *2: With Night Set-Back function, the CITY MULTI system can run at heating mode with target temperature set to 12°C / 54°F under schedule control. (It depends on the outdoor unit model. Not applicable on PUMY.) This function can protect the room from dropping down to extremely low temperature at mid-night.
 *3: AG-150A controls 50 units. When AG-150A is connected with PAC-YG50ECA, units are counted based on the number of connected PAC-YG50ECA.
 *4: EB-50GU-J is compatible with TG-2000A Ver.6.40A or later.
 *5: AE-200E/AE-50E is compatible with TG-2000A Ver. 6.50A or later.
 *6: EW-50E is compatible with TG-2000A Ver.6.60 or later.

Note: AG-150A is compatible with TG-2000A Ver.5.5* or later. GB-50ADA-J is compatible with TG-2000A Ver. 6.3* or later.

AG-150A connected with PAC-YG50ECA is compatible with TG-2000A Ver.6.1* or later.

Depending on the versions of TG-2000A and AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J, some of the functions may not be available for use. Each system allows the connection of only one TG-2000A.

2. List of TG-2000A functions

(1). The data for each AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J can be grouped and used to control the operation of up to 2000 units in floor or block units, etc., from the personal computer screen. By using a PI Controller/PLC or a watt-hour meter, the power rate can be apportioned, energy saving control can be executed, and other general equipment can be controlled.

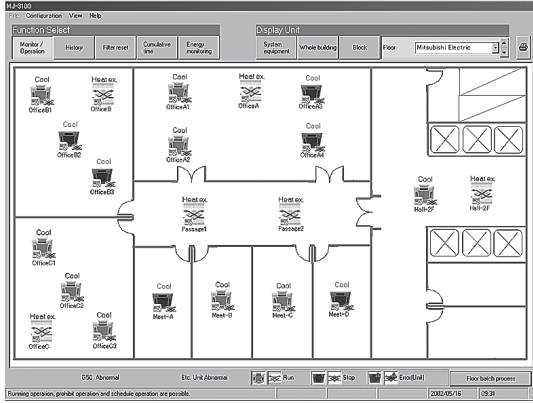

List of integral software functions

Item	Details	AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J license			
		Web monitor	Schedule	Energy management	PLC for general equipment
ON/OFF	The units can be turned ON and OFF for all floors or in block, floor or group units.	√			
	The general equipment can be turned ON and OFF. (*: A PLC and the general equipment control PLC software required.)	√			
Operation modes	The operation mode can be switched between COOL, DRY, FAN, AUTO and HEAT for all floors or in block, floor or group units.	√			
Temperature setting	The temperature can be set within the following range. Cool/Dry: 19°C - 35°C/67°F - 95°F Heat: 4.5°C - 28°C/40°F - 83°F Auto (single set point): 19°C - 28°C/67°F - 83°F Auto (dual set points) [Cool]Same as the set temp. range for Cool mode. [Heat]Same as the set temp. range for Heat mode. *The settable temperature ranges and items vary depending on the indoor and outdoor unit models.	√			
Fan speed	The fan speed can be set to four stages for all floors or in block, floor or group units.	√			
Air direction	The air direction can be set in four vertical directions or to swing for all floors or in block, floor or group units. (The selectable air direction differs according to the model.)	√			
Interlocked unit ON/OFF (LOSSNAY)	If there is an interlocked unit (LOSSNAY), the unit can be turned ON (strong/weak) or OFF for all floors or in block, floor or group units. (Note that the ventilation mode cannot be selected for interlocked units.)	√			
Local operation prohibit	The items for which operation with the local remote controller are to be prohibited can be selected for all floors or in block, floor or group units. (The items that can be prohibited are ON/OFF, operation mode, set temperature, filter sign reset, Air direction, Fan speed and Timer.)	√			
Annual / weekly schedule	The annual/weekly (season:weekly x 5) schedule function can be used by registering the license. Five settings, such as seasonal settings for summer and winter, can be saved.	√	√		
Power rate apportionment charging (power rate manual input)	By registering the AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J unit license number, the power rate apportionment percentage data for each indoor unit can be output in CSV format. The power rate for each tenant can be easily calculated by having each user input the power rate manually.	√		√	
Power rate apportionment charging	By using the PI controller (PAC-YG60MCA) and a pulse output watt-hour meter, the air-conditioning charges can be calculated based on the amount each tenant's air-conditioner has operated. Up to five charging rates can be applied per day.	√		√	
	By using a PLC (with electric amount count software) and a watt-hour meter with pulse transmitter, the air-conditioning charges can be calculated based on the amount each tenant's air-conditioner has operated. Up to five charging rates can be applied per day.				
History	The error history and up to 10000 items for operation history can be saved. Each history file can be output as a daily report or monthly report in CSV format. The maximum number of error history data that can be saved depends on the type of errors and the number of connected AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J units. The operation history consists only of the operations carried out with the TG-2000A, and is limited to some limited operation items.	√			
Operation time monitor	The cumulative operation time of each indoor unit can be viewed or output as a CSV format file. (This function is valid only when the charging function license is registered.)	√		√	
Filter sign display mask	Automatic display of the filter sign can be disabled. (System batch.) In this case, the filter sign state is confirmed with manual operations.	√			
Energy saving control	Energy saving operation is possible using the "ON/OFF", "set temperature change", "fan operation changeover" and "performance save operation" functions.	√		√	
Energy saving (peak cut)	Energy saving operation matching the amount of power in use is possible. (PLC (with electric amount count software) and watt-hour meter with pulse transmitter are required.)	√		√	
Night Set-Back function ※1	Heating from 12°C / 54°F and higher can be set using the schedule function.	√			
	This function helps keep the indoor temperature in the temperature range while the units are stopped and during the time this function is effective.	√			
Set temperature limit	Sets the temperature range for the local remote controllers. * The item and range that can be operated or monitored depend on the function of the indoor unit.	√			
Control other general equipment	The ON/OFF status of the connected general equipment and the error status can be changed or monitored from the DIDO(PAC-YG66DCA).	√			
	It is possible to control other general equipment on ON/OFF operation / monitoring / Alarm / scheduling, if TG-2000A combines PLC installed with PLC software PAC-YG21CDA.	√			
	Setting inter-lock with CITY MULTI indoor units is possible using PLC(PAC-YG21CDA). (Table setting tool for input/output definition is needed.)	√			√

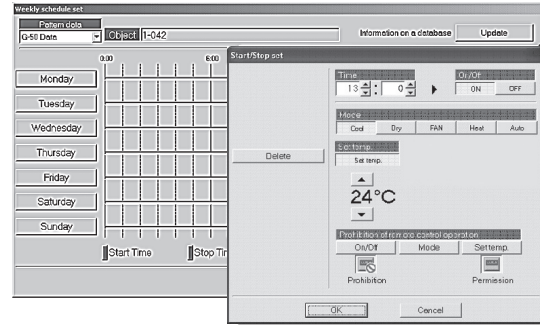

※1: With Night Set-Back function, the CITY MULTI system (PUMY models excluded) can run at heating mode with target temperature set to 12°C/54°F under schedule control. (It depends on the outdoor unit model.)
This function can protect the room from dropping down to extremely low temperature at midnight.

Note: Depending on the versions of TG-2000A and AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J, some of the functions may not be available for use.

4. Requirements (system recommendations)

	Usage	System Requirements
Integrated centralized control software TG-2000A	This version is compatible with AE-200E/AE-50E/EW-50E/AG-150A and EB-50GU-J connection.	OS: Windows 8.1 Pro, Windows 7, Windows Vista (It doesn't operate in Windows 8, Windows XP and Windows 2000.) Refer to the table below for details.

We recommend the following software and hardware when using this application (TG-2000A).

Item	Requirement		Recommended
PC	PC/AT compatible machine (Business model is recommended)		Operation confirmed using HP and Dell computers
CPU	Core™ 2 Duo 1.66GHz or faster		Core™ i3 1.6GHz or faster
Memory	In the case of Windows® 8.1/7 (64bit): 2GB or more		4GB or more
	In the case of Windows® 7/Vista® (32bit): 1GB or more		2GB or more
OS	Windows® 8.1 Pro (64bit)		English version only Only compatible with "Pro" and "64 bit" versions of Windows® 8.1 Not compatible with Windows® 8
	Windows® 7 Professional (64/32bit) Service Pack 1 (*1)		English version only
	Windows Vista® Business (32bit) Service Pack 2 (*1)		English version only
HDD	Standard	6GB or more (2GB or more of C drive free space necessary)	40GB or more of C drive free space necessary when using the trend function. The drive used for automatic output must have the following free space according to the number of groups. 200 groups = 2GB, 500 groups = 5GB, 1000 groups = 10GB, 2000 groups = 20GB
	Wide area	20GB or more (Free space)	
Storage device	CD-ROM drive/DVD-ROM drive (*2)		Devices other than those shown at the left may also be installed.
Resolution	1024 × 768 or higher, 65536 colors or more		
Serial port	1 port or more		Required when using RS-485 communication WHM (Not necessary when using PLC)
LAN	1 port (100BASE-TX/10BASE-T)		(*3)
Modem	56K modem or TA		Required when using a modem in wide area mode.
USB	2 port or more		For the data backup.
Other	Computer must be dedicated for this use (TG-2000A).		Must be used for 24-hour constant operation (*4)

*1: It is necessary to correspond to each Service Pack. TG-2000A is not normally set up at the uncorrespondence.

Please apply Service Pack of the correspondence.

*2: To set up ".NET Framework 3.5" using the Windows® 8.1 setup disk (DVD), a DVD-ROM drive is required.

*3: Purchase the option, or use the equipment recommended for the computer when purchasing the computer.

*4: Reboot the computer where TG-2000A is installed, once a week.

5. Compatible Units

The TG-2000A has two main functions: centralized control of air conditioners and cost accounting. However, not all functions are available with all air conditioners.

Table: Compatible units and function list (○ : supported, △ : Certain restrictions apply, × : Not supported)

Model	Function	Control/ Maintenance	Charging (Billing) without WHM	Charging (Billing) with WHM	Energy Saving /Peak Cut
Y series		○		○ *1	○
HP series		○		○ *1	○
R2 series		○		○ *1	○
WR2 series		○		○ *1	○
WY series		○		○ *1	○
Multi S series		○		○ *1	○*6
Indoor unit		○		○ *2	○
LOSSNAY		○		○ *3	△*7
OA processing unit		○		○ *1	△*8
Air To Water Booster unit		○	×	△*12	△*13
Air To Water HEX unit		○	×	△*12	△*13
"A" control type *4	○ (Adapter required)			○ *1,5	△*9
"K" control type *4	○ (Converter required)			○ *1,5	△*10
Room Air Conditioner	○ (Adapter required)		×	× *14	△*11

*1 : Can be calculated for each charging block. May not be available with some older models.

*2 : Indoor unit models before Free Plan models do not support a charge apportioning billing method based on the "capacity save". The existence of even a single unit of those types in the system requires that the method of charge apportioning billing be set to either "Thermo on time" or "Fan operation time".

*3 : LOSSNAY groups to which the remote controller is connected support the charging system.

*4 : Not all of the A-control and K-control units support these functions. The calculation of the charge for the auxiliary heater may not be handled by these units.

*5 : For A-control and K-control units, use the apportioned charging methods that are listed in "Thermo on time" or "Fan operation time" section.

Otherwise, install a watt-hour meter for each unit.

*6 : Outdoor unit capacity control function is not available.

*7 : Only the function to stop the units is available.

*8 : When the attribute is IC (indoor unit): Same type of energy-save control unit as with the Freeplan Indoor unit is possible.

When the attribute is FU (LOSSNAY with a heater/humidifier): no direct energy-save control is possible.

*9 : Inverter models support the outdoor unit capacity save control function.

*10 : Outdoor unit Thermo-OFF control function is not supported. Only the fan speeds control function is available.

*11 : Only the temperature control function or the function to stop the units is available.

*12 : For the charge apportioning of Air To Water Booster unit and Air To Water HEX unit, connect the unit to individual watt-hour meter.

Although only the heating capacity is listed in the specification of Air To Water Booster unit, the "cooling" value is used for the Capacity and Power input of indoor unit parameter for Energy-Monitoring Set Up.

The setting is already made with the cooling value for the models registered in Set-up of model name.

For Air To Water Booster unit and Air To Water HEX unit, the charging function supports only the primary refrigerant system of those units.

(Each unit obtains the reading of its watt-hour meter.)

*13 : Capable of Thermo-OFF control (fan operation control) and bringing the units to stop only.

*14 : Connect a WHM to each Room Air Conditioner unit to monitor the electricity consumption of each unit.

3-10. Electric amount count software [PAC-YG11CDA]

MITSUBISHI ELECTRIC offers a charging function for its air conditioner system. Detailed output of every indoor for electricity consumption of air-conditioning is available. The electricity consumption of the air-conditioner is counted based on the refrigerant consumption of every indoor unit, which allows for precise proportion of electricity consumption.

■ System example

■ Necessary parts for the system

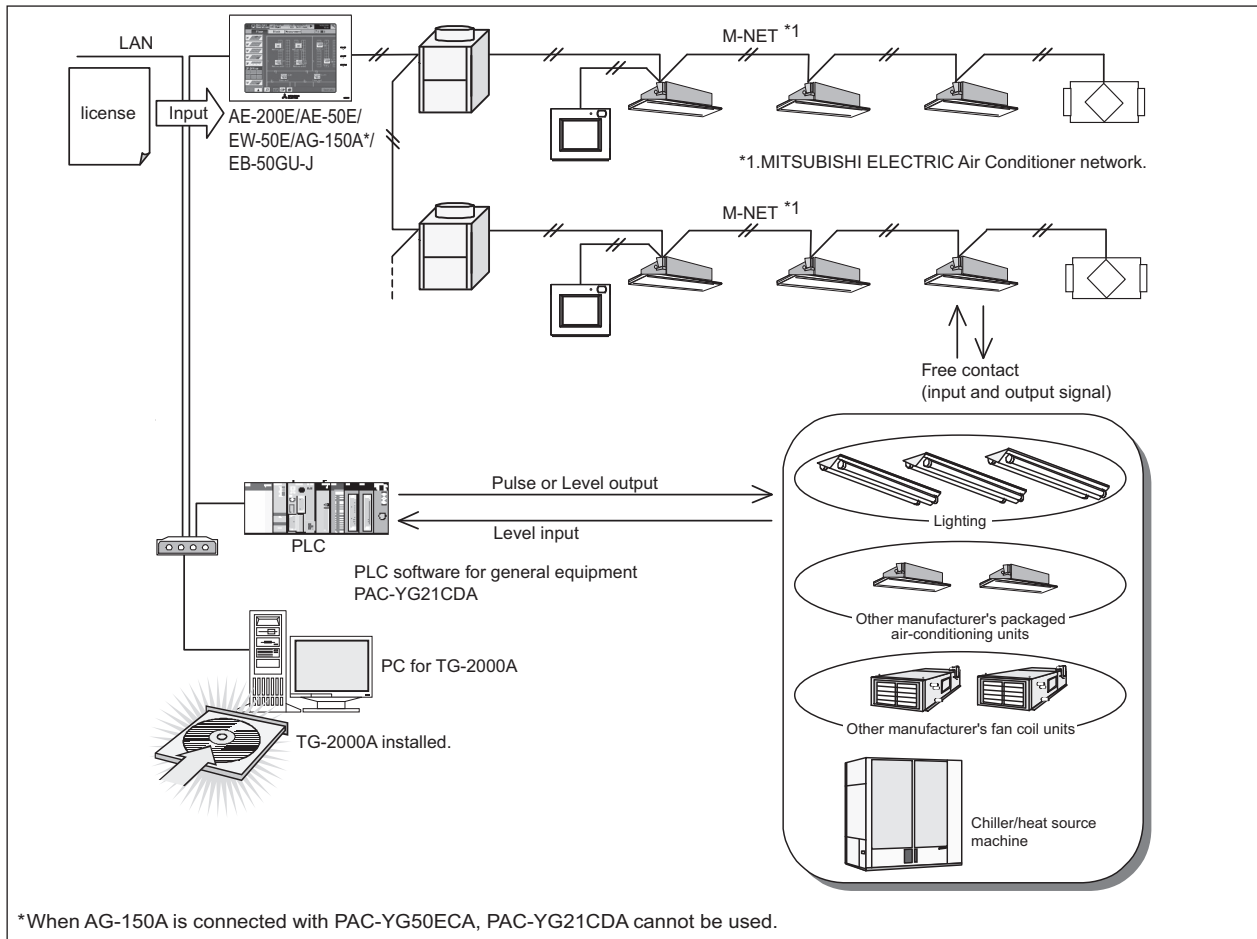

Name (Model name)	Manufacturer	Remarks
PC for central control	PC/AT convertible unit	Confirmed operation of DELL, HP. For details, refer to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Technical Manual.
TG-2000A	MITSUBISHI ELECTRIC	The use of the latest version of TG-2000A and AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is recommended.
Energy management license pack	MITSUBISHI ELECTRIC	Requires for each AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.
Web monitor license	MITSUBISHI ELECTRIC	Requires for each AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.
PLC	MITSUBISHI ELECTRIC	PLC for pulse counting connects maximum 5 sets. For details, refer to Installation Manual of PAC-YG11CDA.
PAC-YG11CDA	MITSUBISHI ELECTRIC	For details, refer to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Technical Manual.
Watt-hour meter with pulse oscillator	MITSUBISHI ELECTRIC	For the specification of the watt-hour meter, refer to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Technical Manual.
Uninterrupted power source (UPS)		Field supplied.

3-11. PLC software for general equipment [PAC-YG21CDA]

MITSUBISHI ELECTRIC's Air Conditioner control system can combine control of general equipment like lighting, air conditioners from other manufacturers, etc.

Functions on general equipment: On/Off operation, alarm, monitoring, scheduling.

System example

Necessary parts for the system

Materials (model names)	Manufacturer	Remarks
PC for central control	PC/AT compatible	Confirmed operation of DELL, HP. For details, refer to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Technical Manual.
TG-2000A	mitsubishi electric	The use of the latest version of TG-2000A and AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is recommended.
Web monitor license	mitsubishi electric	Requires for each AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.
PLC for general equipments license	mitsubishi electric	Table-setting of input/output is necessary.
PLC	mitsubishi electric	Make sure DI board and DO board are mounted.
PAC-YG21CDA	mitsubishi electric	For details, refer to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Technical Manual.

3-12. BACnet® interface [BAC-HD150]

CITY MULTI can easily combine into a Building Management System (BMS) via the BACnet® and M-NET adapter BAC-HD150. BACnet® is an opened transmission protocol widely used at BMS, and related equipment control. CITY MULTI is therefore compatible with large-scaled BMS management via BACnet®. BAC-HD150 can control up to 50 units/groups (including LOSSNAY). Up to 150 units/groups (including LOSSNAY) can be controlled from one BAC-HD150 with three expansion controllers PAC-YG50ECA. (50 units/PAC-YG50ECA)

When the dual set point function is used, no expansion controllers can be connected, and only up to 50 units/groups can be controlled from each BAC-HD150.

■ Specifications

Items		Specifications	
Power source	Rated input	100-240 VAC ±10 % 0.4-0.3 A 50/60 Hz	
	Fuse	250 VAC 3.15 A Time-delay type (IEC127-2 S.S.5)	
Interface	Rated output of the power supply to M-NET transmission lines	22-30 VDC	
	LAN 1 (for BACnet®)	10Base-T or 100Base-TX	
	LAN 2 (for Expansion Controller)		
Ambient conditions	Temperature	Operating temperature range	-10 ~ 55°C (14 ~ 131°F)
		Storage temperature range	-20 ~ 60°C (-4 ~ 140°F)
	Humidity	30 ~ 90 %RH (Non-condensing)	
Dimensions		266 (H) × 250 (W) × 97.2 (D) mm (10-1/2 (H) × 9-7/8 (W) × 3-7/8 (D) in.)	
Weight		2.8 kg (6-3/16 lbs.)	
Installation conditions		Inside the metal control panel (indoor)

■ External Dimensions

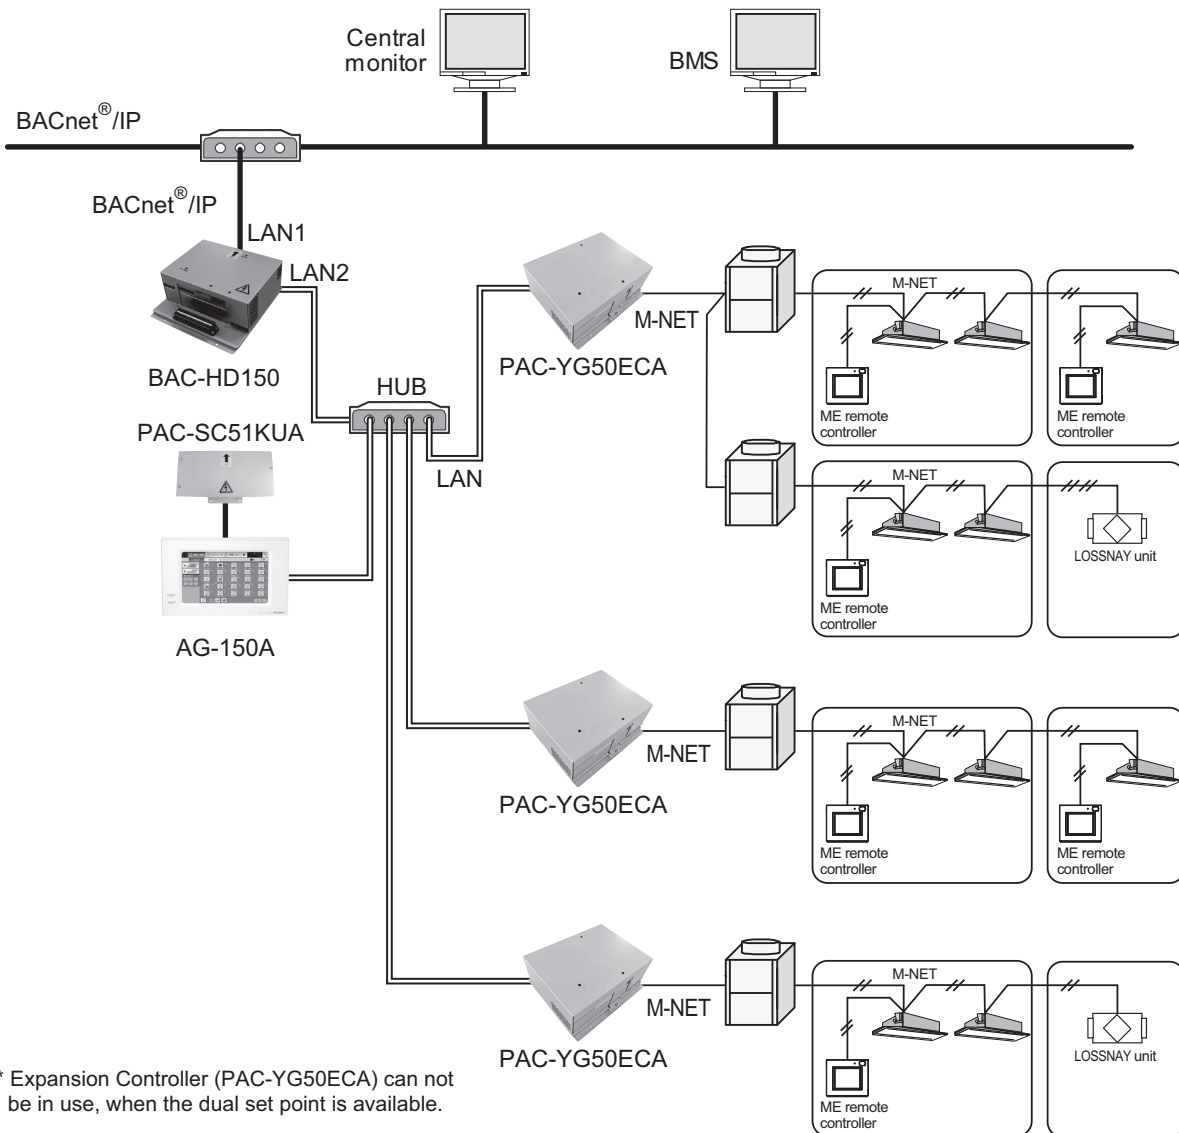

■ System example (Connection of 50 units / groups)

* When using the dual set point function, a maximum of 50 units can be connected.

■ System example (Connection of 150 units / groups with PAC-YG50ECA)

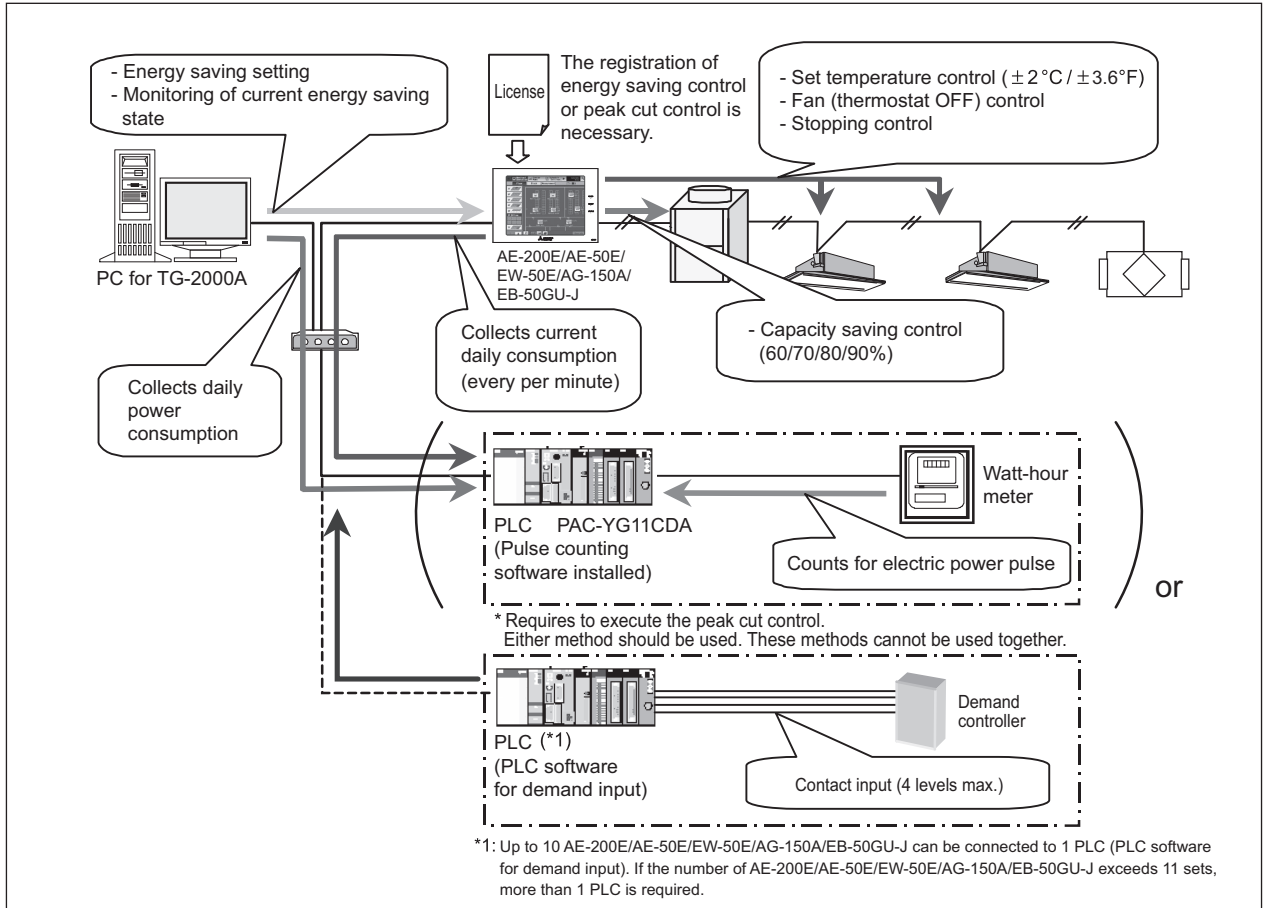

* Expansion Controller (PAC-YG50ECA) can not be in use, when the dual set point is available.

3-13. PLC software for demand input [PAC-YG41CDA]

MITSUBISHI ELECTRIC's CITY MULTI has its intelligent way to carry out peak-cut control while maximizing the air conditioning effect.

■ System example

■ Necessary parts for the system

Name (Model name)	Manufacturer	Remarks
PC for central control	PC/AT convertible unit	Confirmed operation of DELL, HP. For details, refer to AE-200E/AE-50E/ EW-50E/AG-150A/ EB-50GU-J Technical Manual.
TG-2000A	MITSUBISHI ELECTRIC	The latest version is recommended.
AG-150A/EB-50GU-J/AE-200E/ AE-50E/ EW-50E	MITSUBISHI ELECTRIC	The latest version is recommended.
Energy management license pack	MITSUBISHI ELECTRIC	Requires for each AE-200E/AE-50E/ EW-50E/AG-150A/EB-50GU-J.
Web monitor license	MITSUBISHI ELECTRIC	Requires for each AE-200E/AE-50E/ EW-50E/AG-150A/EB-50GU-J.

Applying the energy saving setting from the integrated centralized control software TG-2000A or Initial setting Web allows conducting the energy saving control by the indoor/outdoor units or peak-cut control by using PLC.

Item		Content
Energy saving control	Indoor unit control	The TG-2000A or Initial setting Web sets the following energy saving items and energy saving time to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J per operation block. AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J conducts energy saving operation to the indoor units with the set detail. ① Temperature control ($\pm 2^{\circ}\text{C} / \pm 36^{\circ}\text{F}$) ② Fan control (Thermostat ON) ③ Stopping control For the block with temperature difference between set and inlet temperature exceeding the set, the energy saving control set at level 0 is not applied.
	Outdoor unit control ²	The TG-2000A or Initial setting Web sets the following energy saving items and energy saving time to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J per outdoor unit and the set AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J conducts the energy saving operation for the outdoor unit.
Peak cut control	Power consumption monitoring method ³	Connecting the watt-hour meter (PLC(PAC-YG11CDA)) or PAC-YG60MCA allows conducting energy saving operation meeting the power consumption. The control object and detail are same as that of the energy saving rotated control. One set of the watt-hour meter can be set for each AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.
	Demand controller method ³ (PAC-YG41CDA)	Energy-saving control that is appropriate to the current demand level is performed by receiving the demand level contact signal from the demand controller using the PLC. An installation of demand input PLC software is necessary to use the PLC. Control targets and control content of this method are the same as those of the energy-saving control. Each PLC unit can control up to ten AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J units to be on the energy-saving control.
Monitoring of energy saving control status/history ¹	Control status	During the energy saving control, the energy saving mark is displayed on the air conditioner group icon of Web, TG-2000A.
	Daily report	Daily power consumption and control level can be monitored by the web, TG-2000A. AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J can hold the data for 3 days max. including that of today, yesterday and the day before yesterday.
	Monthly report	Monthly power consumption can be monitored by the TG-2000A (for 62 days max.). The TG-2000A monitors from PLC for display and storing.

1; Daily Report and Monthly Report are functions that are enabled only when registering the "Energy-saving peak cut control license."TG-2000A must always be kept in operation to gather data on energy-saving control status and the operation history. The auto-output CSV files in the Daily Report and Monthly Report can be saved for two years in the appropriate folders.

"Power consumption and control level" report is available only when "Power consumption monitoring method" is used.

When other methods are used, only reports on the control level will be available.

2; For Mr. Slim units, apply Outdoor Unit Control function only to Inverter type units.

3; For further detail, please refer to Technical Manual of AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J and TG-2000A.

3-14. LONWORKS® interface [LMAP04-E]

CITY MULTI can easily combine into a Building Management System (BMS) via the LONWORKS® and M-NET adapter LMAP04-E. LONWORKS® is an opened transmission protocol widely used at BMS, and related equipment control. CITY MULTI is therefore compatible with large-scaled BMS management via LONWORKS®.

One LMAP04-E serves up to 50 indoor units. (CITY MULTI, Mr.Slim, and LOSSNAY.)

Note

*1: This product does not have a charge function.
 The charge (apportioning) function must be prepared separately in the master system.

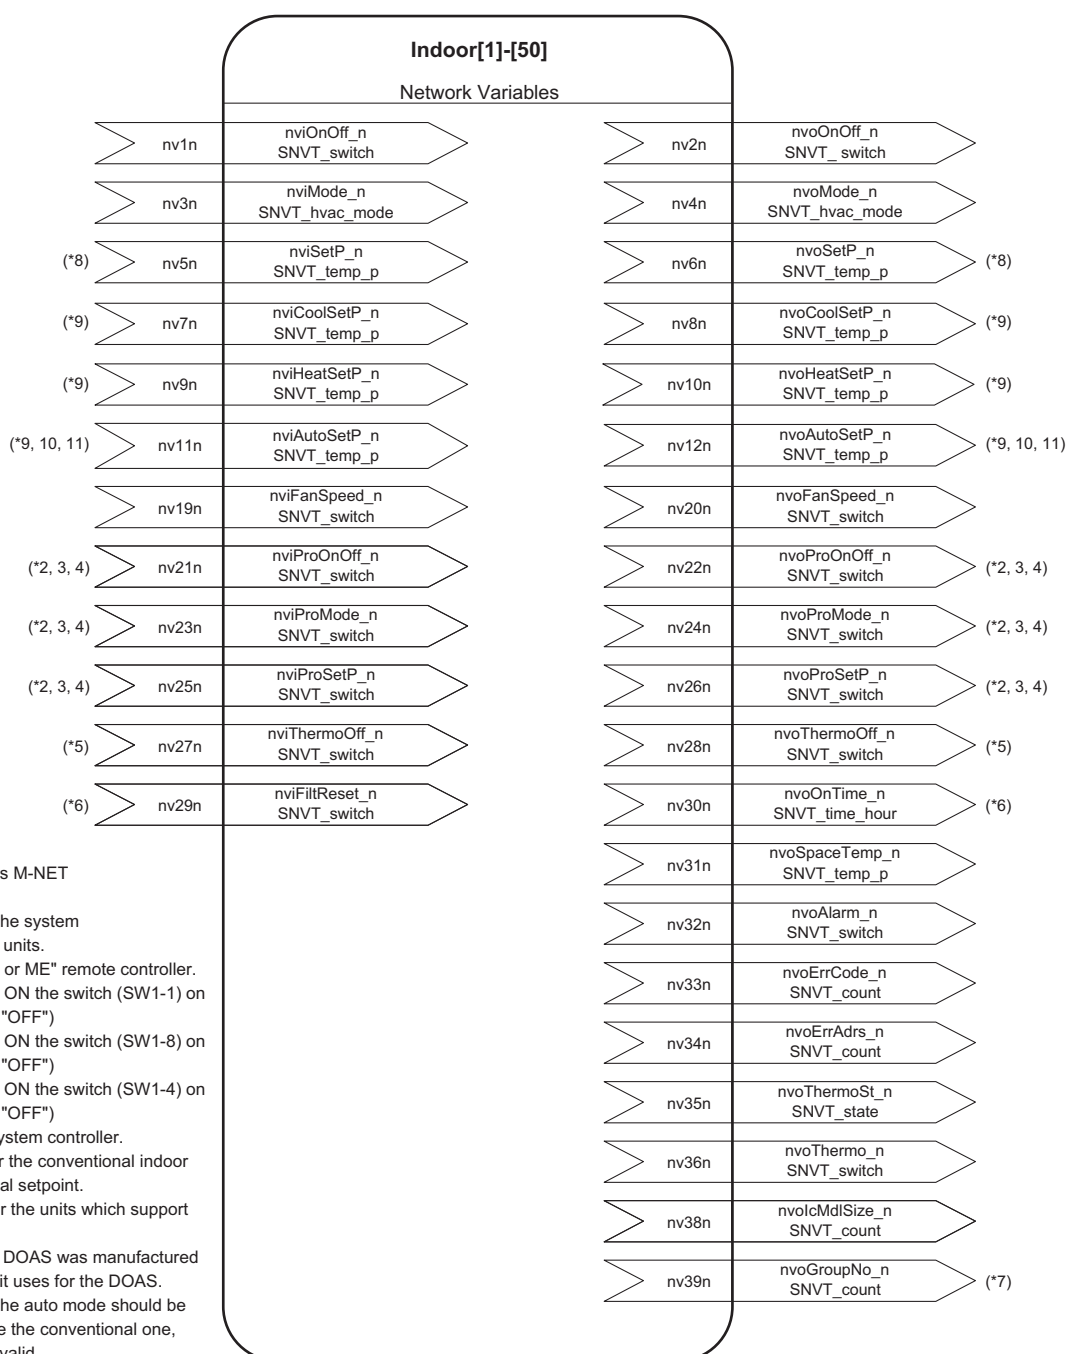

■ Environment specification

Item		Description
Connected Equipment		MITSUBISHI ELECTRIC Multiple split-type air conditioners Split-type air conditioners Heat recovery ventilators (※For details of the connectable models, please contact the dealer.)
Number of Units		LM-AP can control 50 indoor units (including LOSSNAY)
Neuron CHIP		TMPN3150/FT3150-P20 (10MHz)
Network Transceiver		FTT-10A/FT-X1 (Free Topology 78kbps)
Performance	Average communication capacity	2.5 inputs/second
	Peak communication capacity	50 inputs/second (for one second)

- ※ The proper communication is not obtainable when communication intervals exceed its performance, assure sufficient intervals.
- ※ ACK Service is recommended for the network service.
- ※ Detailed specifications for the LONWORKS® network can be found in "FTT-10A Free Topology Transceiver User's Guide" or " FT3120/FT3150 Smart Transceiver Data Book" by Echelon Corporation.

<LMAP04-E Network Variables>

Please obtain the Network Variables Specification for details from your dealer.

Notes

- *1: "n" of the network variable shows M-NET address of indoor units.
- *2: It may be unable to be used by the system configuration of air-conditioners units.
- *3: It is possible to use with an "MA or ME" remote controller.
- *4: For the use of this function, turn ON the switch (SW1-1) on LM ADAPTER. (Factory setting "OFF")
- *5: For the use of this function, turn ON the switch (SW1-8) on LM ADAPTER. (Factory setting "OFF")
- *6: For the use of this function, turn ON the switch (SW1-4) on LM ADAPTER. (Factory setting "OFF")
- *7: It is possible to use with other system controller.
- *8: This function is available only for the conventional indoor units which don't support the dual setpoint.
- *9: These functions are available for the units which support the dual setpoint.
- *10: This function is available for the DOAS was manufactured in October, 2012 or later, when it uses for the DOAS.
- *11: This function is available when the auto mode should be controlled by single set point like the conventional one, even when the dual set point is valid.

External dimension

3-15. Transmission booster [PAC-SF46EPA]

The Outdoor unit supplies transmission power 30VDC for the indoor-outdoor transmission line at its connector TB3 and TB7. The power is consumed by the Indoor unit, ME remote controller, and System controllers. When the total quantity of Indoor units, and ME remote controller, and System controllers is over 40, or when transmission power supply is not enough, the transmission booster PAC-SF46EPA should be designed into the air-conditioner system to ensure the system communication. Indoor units sized P200 and 250 are counted as 2 units.

1. Designing PAC-SF46EPA into an air-conditioner system.

Taking the power consumption of Indoor unit sized P15-P140 as 1, the equivalent power consumption or supply of others are listed at Table 1 and Table 2.

Table 1 The equivalent power consumption

Indoor, OA unit	Indoor unit	BC controller	PWFY			MARC. LOSSNAY	ME Remote Contr.		System Contr.			ON/OFF Contr.	MN Converter	Outdoor unit	
Sized P15-P140 GUF-50, 100	Sized P200, P250	CMB	P100VM -E-BU	P100VM -E1-AU P100VM -E2-AU	P200VM -E1-AU P200VM -E2-AU	PAR-31MAA(E) PAC-YT52CRA PAR-FA32MA LGH-RVX-E PZ-61DR-E PZ-43SMF-E	PAC-YG60MCA PAC-YG66DCA PAC-YG63MCA	PAR-U02MEDA PAC-IF01AHC	AE-200E AE-50E	AG-150A EB-50GU-J	AT-50B EW-50E	PAC -YT40ANRA	CMS-MNG-E	TB7 power consumption	
1	7	2	6	1	5	0	0.25	0.5	0	0.5	4	0	1	2	0

*RC : Remote Controller

Table 2 The equivalent power supply

Transmission Booster	Power supply unit	Expansion controller	BM ADAPTER	System Controller		Outdoor unit	Outdoor unit
PAC-SF46EPA	PAC-SC51KUA	PAC-YG50ECA	BAC-HD150	AE-200E/AE-50E	EW-50E	Connector TB3 and TB7 total *	Connector TB7 only
25	5	6	6	0 ^{**}	1.5	32	6

*If PAC-SC51KUA is used to supply power at TB7 side, no power supply need from Outdoor unit at TB7, Connector TB3 itself will therefore have 32. Not applicable to the PUMY model.

**1 AE-200E/AE-50E has a built-in function to supply power to the M-NET transmission line. The amount of power that an AE-200E or an AE-50E can supply is equivalent to the power required by an MN converter (CMS-MNG-E) that is used for maintenance.

Transmission booster PAC-SF46EPA has equivalent transmission power 25.

With the equivalent power consumption values in Table 1 and Table 2, PAC-SF46EPA can be designed into the airconditioner system to ensure proper system communication according to A, B, C.

- (A) Firstly, count from TB3 at TB3 side the total quantity of Indoor units, OA processing units and ME remote controller, and System controllers. If the total quantity reaches 40, a PAC-SF46EPA should be set. In this case, Indoor units sized P200 and 250 are counted as 2 indoor units, but MA remote controller(s), PZ-61DR-E, and PZ-43SMF-E are NOT counted.
- (B) Secondly, count from TB7 side to TB3 side the total transmission power consumption. If the total power consumption reaches 32, a PAC-SF46EPA should be set. Yet, if a PAC-SC51KUA or another controller with a built-in power supply, such as PAC-YG50ECA, is used to supply power at TB7 side, count from TB3 side only.
- (C) Thirdly, count from TB7 at TB7 side the total transmission power consumption, If the total power consumption reaches 6, a PAC-SF46EPA should be set.

External dimension

3-16. AHC ADAPTER [PAC-IF01AHC-J]

Advanced HVAC CONTROLLER (hereafter referred to as AHC) comprises of MITSUBISHI ELECTRIC's AHC ADAPTER (PAC-IF01AHC-J) and α2 SIMPLE APPLICATION CONTROLLER* (hereafter referred to as ALPHA2).

* α2 SIMPLE APPLICATION CONTROLLER is one of the Programming Logic Controllers that are manufactured by MITSUBISHI ELECTRIC CORPORATION.

AHC allows for the connection of MITSUBISHI ELECTRIC's air conditioning network system (hereafter referred to as M-NET) to other systems, which was not possible with the use of ALPHA2 alone. AHC provides the following functions.

- 1) Controls external devices using the sensor data of the air conditioning units connected to M-NET.
- 2) Interlocks the operation of air conditioning units and external devices that are connected to ALPHA2.
- 3) Controls air conditioning units that are connected to M-NET.
- 4) Allows for the combined use of the items 1)-3) above.
- 5) Monitors the input/output status of ALPHA2 via a remote controller or a centralized controller.

Compatible controllers [As of April 2013 (North America); June 2013 (outside North America)]

- Remote Controller: PAR-U01MEDU, PAR-U02MEDA
- Centralized Controller: EB-50GU-A, EB-50GU-J

* Refer to the manual that came with ALPHA2 for information about ALPHA2.

* The use of AHC ADAPTER requires either a remote controller or a centralized controller.

External Dimensions

Usage Restrictions

- This manual contains explanations and figures to help the user to properly install, program, and operate AHC.
- All the examples and figures contained in this manual are there for the sole purpose of clarification. It is not guaranteed that AHC will properly work in the types of applications used as examples or are shown in figures. MITSUBISHI ELECTRIC shall not be held responsible for any damage or loss that may result from the use of AHC in the manners shown in the examples and figures contained in this manual.
- Thoroughly read the technical manual, and check the surrounding for safety before changing the settings of AHC in operation (e.g., changing programs or parameters, forcing signal output, or changing the operation status).

1. Specifications

(1) Device specifications

Item		Specifications	
Power supply	M-NET	17–32 VDC	
Interface	M-NET transmission terminal	Exclusively for connection to M-NET	
	Connector for ALPHA2	Exclusively for connection to ALPHA2	
Ambient conditions	Temperature	Operating temperature range	-10°C – +55°C [+14°F – +131°F]
		Storage temperature range	-20°C – +60°C [-4°F – +140°F]
	Humidity		30%–90% RH (Non-condensing)
Dimensions (W × H × D)		116 × 90 × 40 mm [4-9/16 × 3-1/2 × 1-9/16 in.]	
Weight		0.4 kg [0.9lbs]	
Installation conditions		Inside the metal control box * To be used in a business office or similar environment	

1) System configuration

The figure below only shows the transmission cable connections. Power cables are omitted.

* AHC ADAPTER requires either an outdoor unit or a power supply device as a power source.

2) Functions

AHC comprises of an ALPHA2 and an AHC ADAPTER. The use of AHC ADAPTER requires the use of ALPHA2.

The following ALPHA2 are compatible with AHC. Other types of ALPHA2 do not support AHC.

- AL2-14MR-A
- AL2-14MR-D
- AL2-24MR-A
- AL2-24MR-D

Compatible controllers [As of April 2013 (North America); June 2013 (outside North America)]

- Remote Controller: PAR-U01MEDU, PAR-U02MEDA
- Centralized Controller: EB-50GU-A, EB-50GU-J

AHC enables the connection of M-NET with other systems, which was not possible with the use of ALPHA2 alone. AHC supports the functions listed in Table 1.

Table 1 AHC function list

AHC function	Example	Supplemental Inf.
1) Controls external devices using the sensor data of the air conditioning units connected to M-NET.	<ul style="list-style-type: none"> External heaters are controlled, using the temperature sensors on air conditioning units or on remote controllers. 	By using the sensor on the air conditioning unit connected to the M-NET, no other external sensors will be required.*1
2) Interlocks the operation of air conditioning units and external devices that are connected to ALPHA2.	<ul style="list-style-type: none"> The operation of external heaters is interlocked with the operation of air conditioning units in heating operation. The operation of external humidifiers is interlocked with up to 16 air conditioning units. Humidifiers will go into operation whenever at least one air conditioning unit is in operation. 	Operation status data of a maximum of 2 groups of units can be simultaneously collected. Each group can contain a maximum of 16 units. Error status of a maximum of 50 units can be simultaneously collected.
3) Controls air conditioning units that are connected to M-NET.	<ul style="list-style-type: none"> The ON/OFF operation of air conditioning units is interlocked with the insertion/removal of a card into or out of a card reader. 	A maximum of 2 groups of units can be simultaneously controlled. Each group can contain a maximum of 16 units.
4) Allows for the combined use of the items 1)-3) above.	<ul style="list-style-type: none"> Drying operation of air conditioning units is controlled, using the built-in humidity sensor on the remote controller. 	
5) Monitors the input/output status of ALPHA2 via a remote controller or a centralized controller.		

*1 The sensor on the air conditioning unit connected to the M-NET will collect data at 70-second intervals. If a real time control at intervals shorter than 70 seconds is required, connect a sensor to the Analog Input on ALPHA2.

Note: For detailed information about the functions supported by AHC, refer to the technical manual that came with the AHC.

(2) Field-supplied items

The following items are required to install AHC ADAPTER.

* Two types of installation options (A and B in the table below) are available for AHC ADAPTER. Select the one that is best suited for a given environment.

Field-supplied items	Specifications
A Unit fixing screw (required when using L-fittings)	M4 x 2 pcs.
B DIN rail and fixing screw (required when using DIN rails)	DIN rail width: 35 mm (1-13/32 in) Applicable type (IEC 60715/DIN 60715): TH35-7.5Fe, TH35-7.5Al
Functional ground wire	* Use a wire with an appropriate diameter so that the wire can be fixed with the cable strap below the terminal block. A diameter of 10 mm is recommended.
Sleeved ring terminal	M3.5 ring terminal (for M-NET transmission cables (A, B, S)) M4 ring terminal (for functional ground wire)
Transmission cable	<ul style="list-style-type: none"> CVVS Min. 1.25 mm² (Min. AWG 16) * CPEVS: PE*1 insulated PVC*1 jacketed shielded communication cable * CVVS: PVC*1 insulated PVC*1 jacketed shielded control cable * Use cables with an appropriate diameter so that the cables can be fixed with the cable strap below the terminal block. A diameter of 10 mm is recommended.

*1 PE: Polyethylene; PVC: Polyvinyl chloride

[Parts to be Purchased Separately]

Name	Model	Application	Remark
Power supply unit	PAC-SC51KUA	Power supply to the M-NET transmission line	This is not required when power is to be supplied from an outdoor unit.

[ALPHA2 components]

Name	Model	Power source specification	Optional module (Note 1)	Number of ports				Remark
				Digital Input (DI)	Analog Input (AI)(Note 2)	Digital Output (DO)	Analog Output (AO)(Note 2)	
ALPHA2	AL2-14MR-D	Requires a separate 24 VDC power source.	-	8	(8)*	6	-	
			AL2-4EX	12	(8)*	6	-	
			AL2-4EYT or AL2-4EYR	8	(8)*	10	-	
			AL2-2DA	8	(8)*	6	2	
	AL2-24MR-D	Requires a separate 24 VDC power source.	-	15	(8)*	9	-	
			AL2-4EX	19	(8)*	9	-	
			AL2-4EYT or AL2-4EYR	15	(8)*	13	-	
			AL2-2DA	15	(8)*	9	2	
	AL2-14MR-A	Requires a separate 100-240 VAC power source.	-	8	-	6	-	
			AL2-4EX-A2	12	-	6	-	
			AL2-4EYR	8	-	10	-	
	AL2-24MR-A	Requires a separate 100-240 VAC power source.	-	15	-	9	-	
			AL2-4EX-A2	19	-	9	-	
			AL2-4EYR	15	-	13	-	

* The AI ports for the DC type are shared by DI, with a maximum number of 8 AI ports.

* AI and AO cannot be used with the AC type ALPHA2.

(Note 1) I/O Extension Module /Analog Expansion Module

I/O Extension module

- EI: Digital input extension module of ALPHA2. 4 digital input ports can be added.
Type name: AL2-4EX-A2 (AC type) and AL2-4EX (DC type)
- EO: Digital output extension module of ALPHA2. 4 digital output ports can be added.
Type name: AL2-4EYR (AC type) and AL2-4EYT (DC type)

Analog Expansion module

- AO: Analog output extension module of ALPHA2. 2 analog output ports can be used.
Type name: AL2-2DA (DC type)

Only one of the above EI, EO, and AO can be used.

(Note 2) Analog signals that can be used for AI and AO of the DC type ALPHA2

- Analog Input (AI): 0-10V, PT100(*), thermocouple(*)

(*) To use a PT100 or thermocouple, a temperature sensor module is required separately.

Type name: AL2-2PT-ADP(Pt100 sensor), AL2-2TC-ADP(Thermocouple)
(Converts the Pt100/thermocouple to 0-10V)

- Analog Output (AO): 0-10V, 4-20mA

For details, refer to the ALPHA2 manuals (Installation Manual and Hardware Manual).

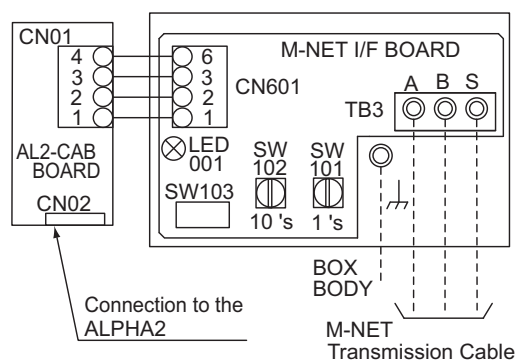

[Commercially available parts]

Name	Application	Remark
External 24 VDC power source	Supplies power to the ALPHA2 and/or Extension module.	Check to see if an external 24 VDC power source is required for a specific ALPHA2 and an Extension module.
Sensor	Measures temperature and humidity, etc.	Some sensors require additional parts.

For details, refer to the ALPHA2 manuals (Installation Manual and Hardware Manual).

2. Wiring Instructions

Connecting the Power and M-NET Transmission Cable.

3. Combination and Application Example of the Input Information and Equipment Items

Interlocking with the external Ventilator Using the Start and Stop Information of Multiple Air Conditioners

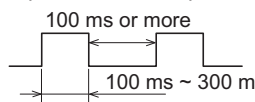

Interlocking the Heater, Humidifier, and Fan

1. Specifications

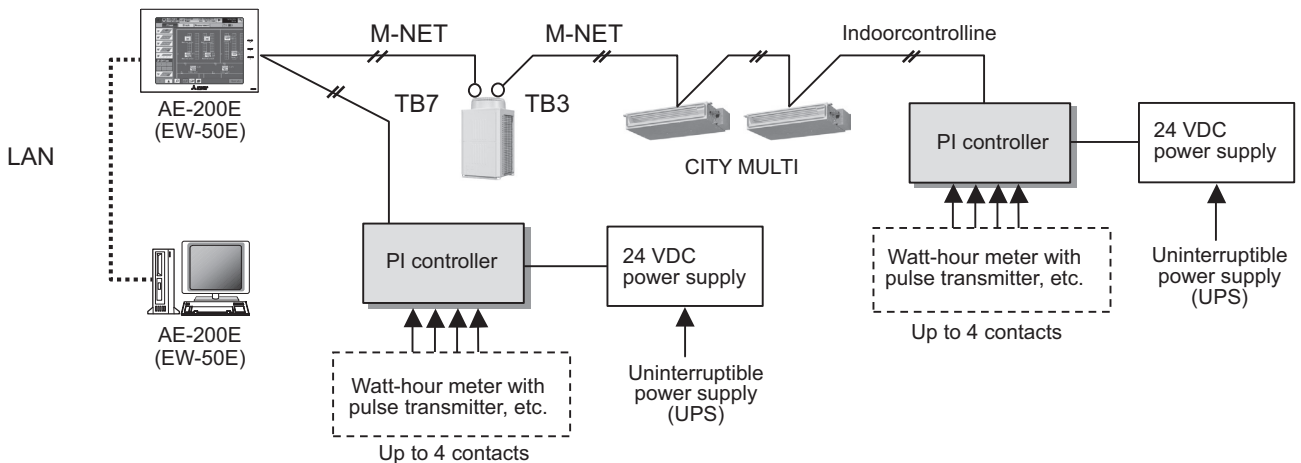

(1). Device Specifications

Item	Rating and Specification	
Power Supply	24 VDC ±10%: 5 W	
Interface	M-NET communication	17 to 30 VDC (*1)
	Non-voltage a-contact input	Number of contacts: 4 Pulse signal: a-contact Pulse width: 100 ms to 300 ms (Idle period until next pulse: 100 ms or more)  Rated voltage: 24 VDC Rated current: 1 mA or less (*2)
Environment Conditions	Temperature	Operating temperature range 0 to 40°C [32°F to 104°F] Storage temperature range -20 to 60°C [-4°F to 140°F]
	Humidity	30 to 90%RH (no condensation)
Dimensions	200 (W) × 120 (H) × 45 (D) mm / 77/8 (W) × 43/4 (H) × 125/32 (D) in	
Weight	0.6 kg / 13/8 lbs	
Time Backup During Power Failure	In the event of power failure or shut-off, the internal capacitor will continue to track time for approximately one week. (The internal capacitor takes about 24 hours to fully charge; a replacement battery is not necessary.)	
Installation Environment	Inside the metal control board (indoors) * Use this product in a hotel, a business office environment or similar environment.	

*1: Supply electric power from a power unit for the transmission line or an outdoor unit. Furthermore, the power consumption factor of the M-NET circuitry of this device is "1/4".

*2: Supply electric power from the main unit to the contacts of the meters.

*3: M3 is the size of the screw on the terminal block (ISO metric screw thread). The number indicates the screw diameter (mm).

*This figure omits the power supply line and only shows the transmission line.

<Restrictions>

Although the maximum settable total number of built-in PI controllers and PI controllers (PAC-YG60MCA) for each AE-200E/AE-50E/EW-50E is 15, the number of them in a system with connection to one or more AE-50E/EW-50E controllers must be 20 or less. (Each built-in PI controllers counts as one unit.)

Maximum of 15 units (total 60 channels) per EB-50GU-J/AG-150A (Expansion controller) ver. 2.45 or later

However, the number of units that can be connected to one AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is up to 50 including this device, indoor units, LOSSNAY units, etc.

NOTE

- For the shield ground of the M-NET centralized control line for central control, use single-point grounding at the power unit for the transmission line.
However, when supplying electric power to the M-NET centralized control line from the R410A series outdoor unit*1 without using a power supply unit for the transmission line, use single-point grounding at the TB7 of that outdoor unit. *1 : Except PUMY model.
Furthermore, when connecting this device to the M-NET indoor control line, use grounding at the TB3 for each outdoor unit system.
- Connecting an Uninterruptible power supply (UPS) to the 24 VDC power supply is recommended in order to prevent the loss of pulse data in the event of a power failure.
If a UPS cannot be connected, try to make the AC power supply to the 24 VDC power supply as much same as the AC power supply line to the meters.
- This device does not support level meters. To use a level meter, incorporate a Converter circuit externally and convert to pulse input.
- If the M-NET transmission line of this device is connected to an M-NET indoor control line and the outdoor unit is down because, for example, the power supply is interrupted for servicing or there is a failure, the PI controller cannot be controlled from the system controller.

(2). Parts Purchased Separately

Prepare the following parts to install this device.

Required Part	Specification
Unit fixing screws	M4 screw × 4 (* M4: ISO metric screw thread)
Power supply for this device	Power source: 24 VDC 0.2 A (Minimum loading), SELV circuit, power line with grounding terminal Ripple noise: Lower than 200 mVp-p Compatible specification Authorized or CE marked products Subject to regulations: - IEC60950 (or EN60950) - CISPR22/24 (or EN55022/24) - IEC61000-3-2/3-3 (or EN61000-3-2/3-3)
Power line	Use a sheathed vinyl cord or cable. At least 0.75 mm ² (AWG18)
M-NET transmission line	Type of the cable: Sheathed vinyl cords or cable which comply with the following specifications or equivalent. • CPEV \varnothing 1.2 mm to \varnothing 1.6 mm • CVVS 1.25 mm ² to 2 mm ² (AWG16 to 14) * CPEV: PE insulated PVC jacketed shielded communication cable * CVVS: PVC insulated PVC jacketed shielded control cable PE: Polyethylene PVC: Polyvinyl chloride Power needs to be supplied to the M-NET circuitry of this device. Use an outdoor unit or a separately purchased power supply unit for the transmission line.
Signal lines	Shows the size of the electric wire (copper wire) that is adapted to the terminal block of this device. Electric wire size..... (1) Solid wire: \varnothing 0.65 mm (AWG21) - \varnothing 1.2 mm (AWG16) (2) Stranded wire: 0.75 mm ² (AWG18) - 1.25 mm ² (AWG16) Single strand: At least \varnothing 0.18 mm

[Parts to be Purchased Separately]

Name	Model	Application	Remark
Power supply unit	PAC-SC51KUA	Power supply to the M-NET transmission line	This is not required when power is to be supplied from an outdoor unit.

[Commercially available parts]

Part	Use	Remark
External 24 VDC power source	Supplies power to the PI controller.	Refer to "Power supply for this device" in "Required Part" above for the capacity of the power supply.

[Recommended Pulse Specifications]

Prepare a measuring instrument that measures the type of pulse signals indicated in table below.

Type	Specification
Output pulse relay method	Semiconductor relay method
Output pulse width	100 ~ 300 ms (100 ms and above) Choose an instrument that outputs non-voltage a-contact point pulse per each pulse output.
Pulse unit	Watt-hour meter: 0.1 kWh/pulse, 1 kWh/pulse recommended Water meter: m ³ /pulse Gas meter: m ³ /pulse Calorimeter: MJ/pulse * Except for the watt-hour meter, select instruments that take measurements in the appropriate pulse unit.

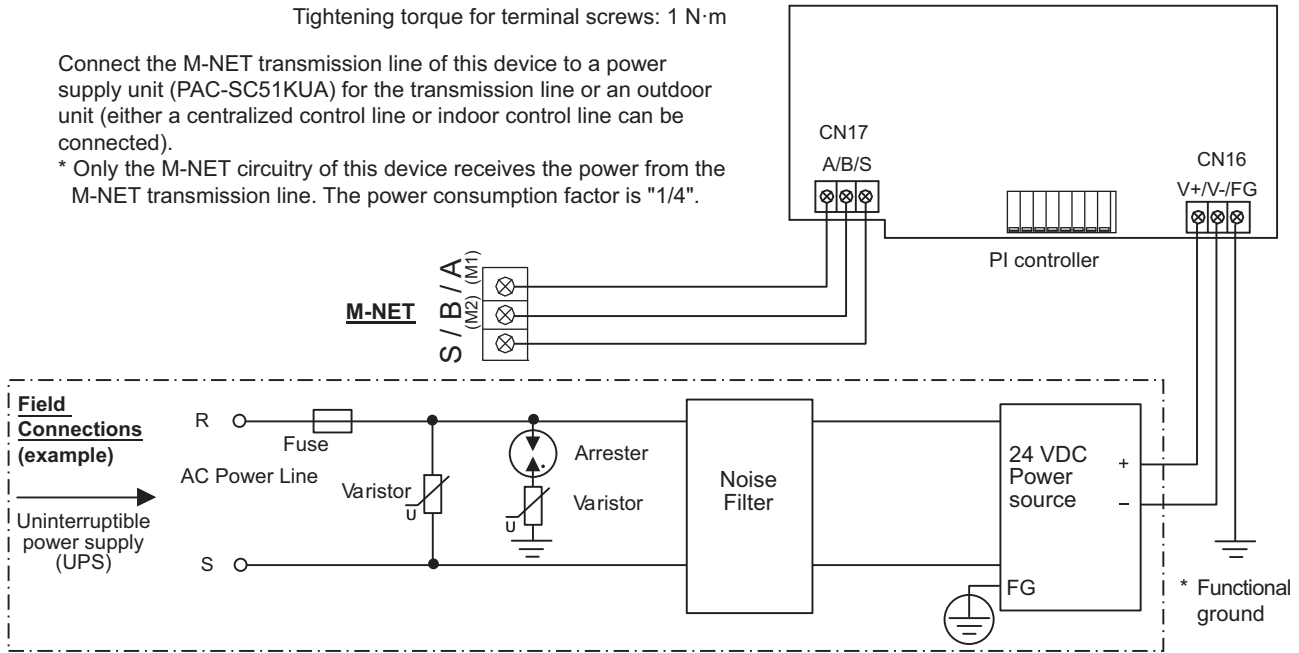

2. Wiring Instructions

(1). Connecting the Power and M-NET Transmission Lines

Tightening torque for terminal screws: 1 N·m

Connect the M-NET transmission line of this device to a power supply unit (PAC-SC51KUA) for the transmission line or an outdoor unit (either a centralized control line or indoor control line can be connected).

* Only the M-NET circuitry of this device receives the power from the M-NET transmission line. The power consumption factor is "1/4".

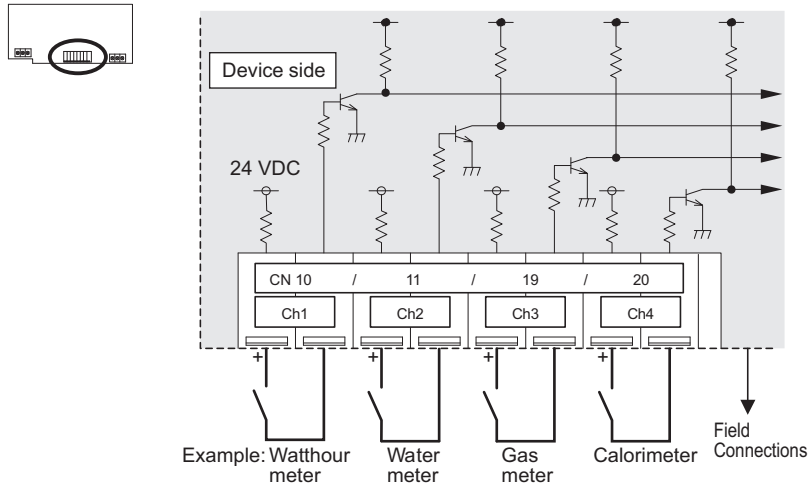

CAUTION

- Use a power line and M-NET transmission line that satisfy the specifications described in "1-(2). Parts Purchased Separately".
- Attach a circuit comprising the following components to the supply primary side of the 24 VDC power supply. (1) Varistor, (2) Arrester, (3) Noise filter, (4) Fuse
- It is important to pay attention to the polarity when connecting to the 24 VDC power supply terminal block. Connecting the positive and negative in the reverse order will cause a failure.
- Fix the power line and M-NET transmission line in place on the outside to ensure that the terminal block is not affected by any external force.
Not securely connecting and fixing the wires in place may cause heat generation and fire.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires. Cover the shielded line of the M-NET transmission line with materials such as vinyl tape and prevent short-circuiting with the plates.

(2). Connecting the Signal Lines

- Separately procure items such as terminal blocks and cables locally.
- The maximum wire length is 100 m (328 ft).
However, since the use of long wires makes the device susceptible to noise, using wires shorter than 10 m (32.8 ft) is recommended.

1) Pulse input (non-voltage a-contact)

NOTE

- The pulse unit (weight) can be added to each of the inputs of channels 1 to 4.
- Be sure to set the pulse unit (weight) settings from a system controller (AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J or TG-2000A).
If the pulse unit (weight) value has not been set as required, the charge function and peak cut control will not work normally because correct measurement of usage amounts will not be made.
- This device does not support level meters.
To use a level meter, incorporate a Converter circuit externally and convert to pulse input.

CAUTION

- The polarity of the input terminals is important, so be sure to match the polarity when using contacts that have polarity.
- Select a contact with a minimum applicable load of 1 mA or less.
- Supply 24 VDC 1 mA from the positive terminal to the contacts of the meters.
- The pulse unit of the watt-hour meter being used should be 1 kWh/pulse or less. Note that the apportioning error will increase if a watt-hour meter with large pulse unit is used.
- The input signal line should not come into contact with or be installed alongside the M-NET transmission line and power supply line. Care must also be taken to avoid wiring loops.
- Strip 12 ± 1 mm ($15/32 \pm 1/32$ in) of the wire coating and insert firmly into the terminal.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.
If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.

3. System Operation Test

Various settings related to the charge operation need to be configured from the TG-2000A prior to starting the charge function operation. Furthermore, in such a case, be sure to perform a charge test run according to the instruction manual for TG-2000A.

Do not turn the power OFF after starting operation. The power rate will not be counted while the power interruption. Forcible pulse input must never be carried out after startup.

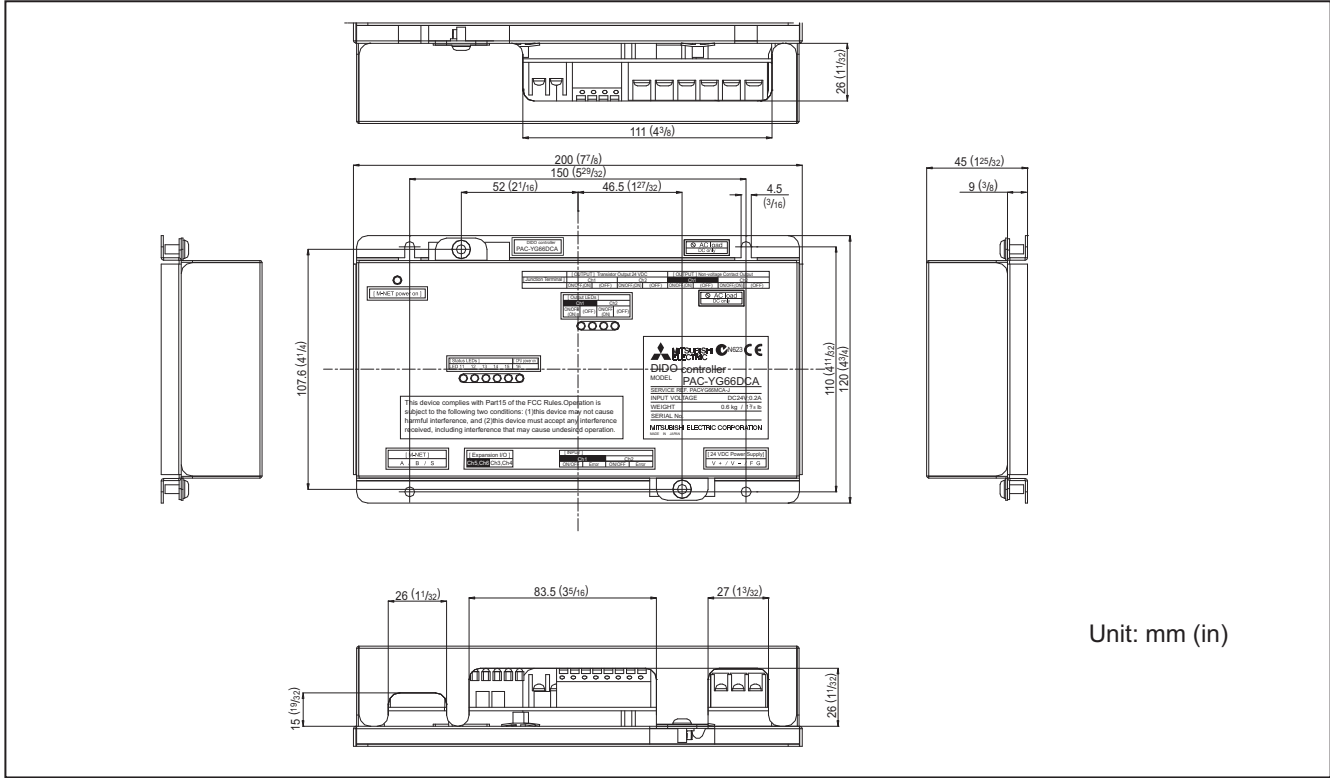

3-18. DIDO controller [PAC-YG66DCA]

The DIDO controller is used in combination with a AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J to operate general-purpose equipment, as well as to monitor operating and error status. It is equipped with two sets of standard terminals (Channels 1 and 2), and four sets of expansion connectors for the input/output terminals. Expansion cable is optional.

Operation can be monitored or performed from the AE-200E/AE-50E/AG-150A LCD.

In addition, this device includes a function that interlocks M-NET devices such as indoor units, general equipment, etc.

External Dimensions

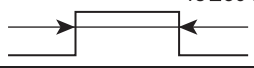

Usage Restrictions

- Mitsubishi Electric does not take financial responsibility for damages caused by issues beyond our control or special circumstances (predicable or unpredictable); and secondary or accidental damages, and damages to other objects. We also do not take financial responsibility for opportunities lost as a result of device failure, or electrical power failure at the end-user site.
- Mitsubishi Electric does not take financial responsibility caused by end-users' requests including, but not limited to, device testing, startup, readjustment, and replacement.
- Do not use this device in disaster prevention, security, or "critical to life" applications.
- It is recommended to provide an external switch for general-purpose equipment in case of a failure of the DIDO controller or a peripheral part.

1. Specifications

(1). Device Specifications

Item	Rating and Specification					
Power Supply	24 VDC ±10%: 5 W (*1)			Screw terminal block (M3) (*8)

Environment Conditions	Temperature	Operating temperature range	0 to 40°C [32°F to 104°F]			
		Storage temperature range	-20 to 60°C [-4°F to 140°F]			
	Humidity	30 to 90%RH (no condensation)				
Dimensions	200 (W) × 120 (H) × 45 (D) mm / 7 7/8 (W) × 4 3/4 (H) × 1 25/32 (D) in					
Weight	0.6 kg / 1 3/8 lbs					
Time Backup During Power Failure	In the event of power failure or shut-off, the internal capacitor will continue to track time for approximately one week. (The internal capacitor takes about 24 hours to fully charge; a replacement battery is not necessary.)					
Installation Environment	Inside the metal control board (indoors) * Use this product in a hotel, a business office environment or similar environment.					

*1: For details, refer to "1-(2). Parts Purchased Separately".

*2: Supply electric power from a power unit for the transmission line or an outdoor unit.

Furthermore, the power consumption factor of the M-NET circuitry of this device is "1/4".

*3: Non-voltage Relay contact or transistor is available for output. Only one can be used at a time.

*4: () is in the case of a pulse.

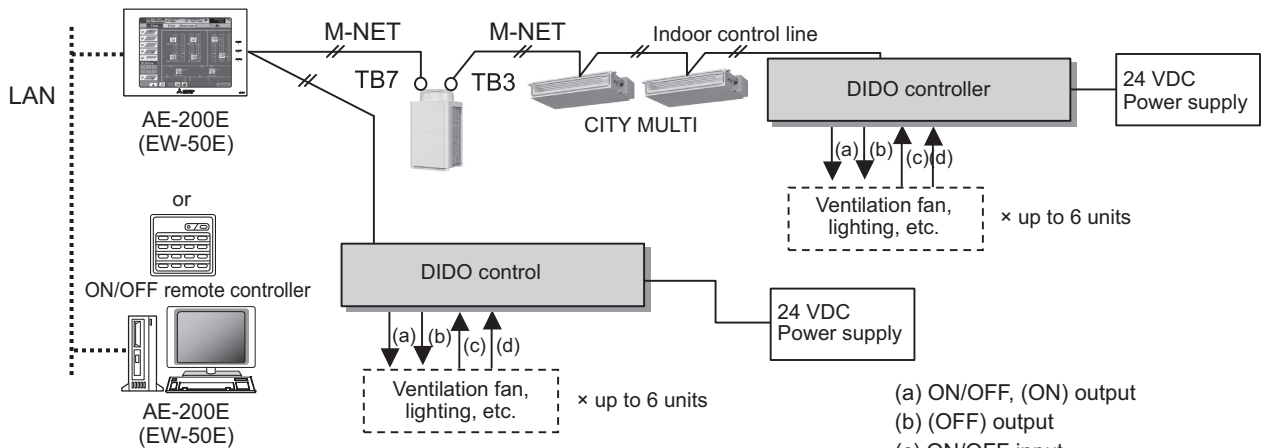

*5: The output is open collector type. Power must be supplied from an external power source to the output circuit of this device.

*6: Power is supplied from this device to the external contacts.

*7: Power must be supplied from an external power source.

*8: M3 and M3.5 are sizes of the screw on the terminal block (ISO metric screw thread).

The number indicates the screw diameter (mm).

*This figure omits the power supply line and only shows the transmission line.

- (a) ON/OFF, (ON) output
- (b) (OFF) output
- (c) ON/OFF input
- (d) Error/Normal input
- Standard: Terminal block (for 2 units)
- Expansion: Connectors (for 4 units)
- Total: 6 units

<Restrictions>

Maximum of 50 units (50 channels) per AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J

However, the number of units that can be connected to a AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is up to 50 including the number of contacts used on this device, an indoor unit, LOSSNAY unit, etc.

Up to 6 contacts can be connected to the DIDO controller (1 M-NET address). One contact connected to this device is calculated as the equivalent of one indoor unit connected to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.

For example, 5 contacts connected to the DIDO controller are calculated as the equivalent of 5 indoor units connected to AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J.

NOTE

- For the shield ground of the M-NET centralized control line, use single-point grounding at the power unit for the transmission line.
However, when supplying electric power to the M-NET centralized control line from the R410A series outdoor unit^{*1} without using a power supply unit for the transmission line, use single-point grounding at the TB7 of that outdoor unit. *1: Except PUMY model.
Furthermore, when connecting this device to the M-NET indoor control line, use grounding at the TB3 for each outdoor unit system.
- If the M-NET transmission line of this device is connected to the M-NET indoor control line and the outdoor unit is down because, for example, the power supply is interrupted for servicing or there is a failure, the DIDO controller cannot be controlled from the system controller.
- Controlling the ON/OFF remote controller is only possible with channel 1 of a standard terminal block.
- When AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is connected, monitoring control can only be performed from AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Web or TG-2000A. Monitoring control cannot be performed from the ON/OFF remote controller.

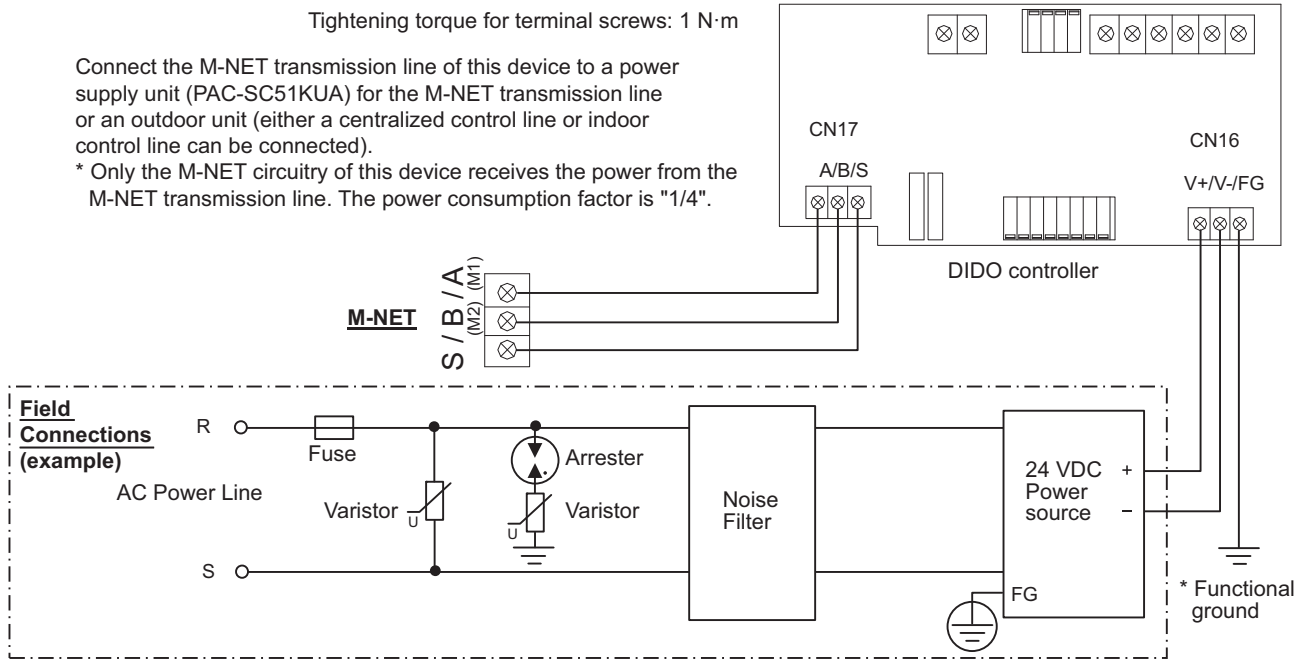

2. Wiring Instructions

(1). Connecting the Power and M-NET Transmission Lines

Tightening torque for terminal screws: 1 N·m

Connect the M-NET transmission line of this device to a power supply unit (PAC-SC51KUA) for the M-NET transmission line or an outdoor unit (either a centralized control line or indoor control line can be connected).

* Only the M-NET circuitry of this device receives the power from the M-NET transmission line. The power consumption factor is "1/4".

CAUTION

- Use a power line and M-NET transmission line that satisfy the specifications described in "1-(2). Parts Purchased Separately".
- Attach a circuit comprising the following components to the supply primary side of the 24 VDC power supply. (1) Varistor, (2) Arrester, (3) Noise filter, (4) Fuse
- It is important to pay attention to the polarity when connecting to the 24 VDC power supply terminal block. Connecting the positive and negative in the reverse order will cause a failure.
- Fix the power line and M-NET transmission line in place on the outside to ensure that the terminal block is not affected by any external force.
Not securely connecting and fixing the wires in place may cause heat generation and fire.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires. Cover the shielded line of the M-NET transmission line with materials such as vinyl tape and prevent short-circuiting with the plates.

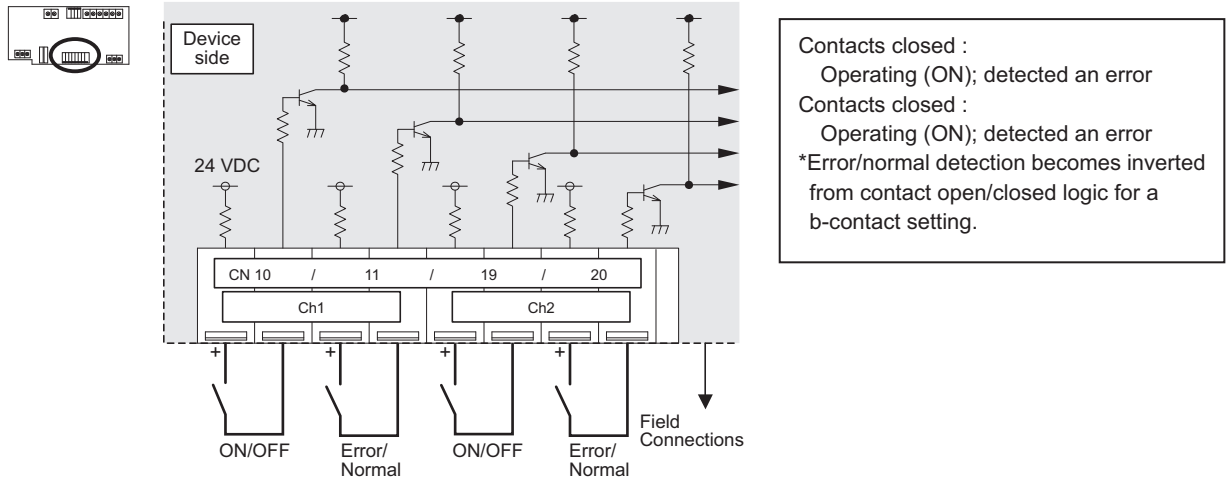

(2). Connecting the Signal Lines

- Separately procure the relay, power supply for the relay, terminal block, and cable locally.
- The maximum wire length is 100 m (328 ft). However, since the use of long wires makes the device susceptible to noise, using wires shorter than 10 m (32.8 ft) is recommended.
- Connect another relay within 10 m (32.8 ft) from DIDO controller to extend the input line.

1) Standard Terminals (Channels 1 and 2)

(1-1) Input

(a) Non-voltage a-contact Inputs

NOTE

- Connect the operate/stop (ON/OFF) inputs so that closing the contact operates (ON) the device and opening the contact stops (OFF) the device.
- The error/normal inputs of channels 1 and 2 can be switched between a-contact and b-contact.

CAUTION

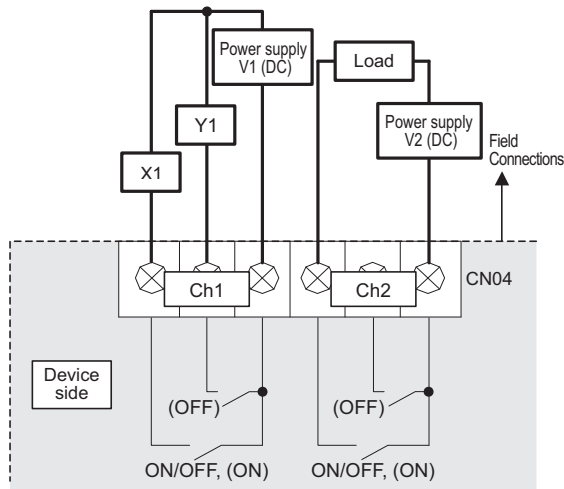

- The polarity of the input terminals is important, so be sure to match the polarity when using contacts that have polarity.
- Select a contact with a minimum applicable load of 1 mADC or less.
- Supply 24 VDC 1 mA from the positive terminal to the external contacts.
- Do not install alongside or in contact with other wires.
- Strip 12 ± 1 mm ($15/32 \pm 1/32$ in) of the wire coating and insert firmly into the terminal.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.

If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.

(1-2) Output

Non-voltage Relay contact or transistor is available for output. Only one can be used at a time.

(a) Non-voltage Relay Contact Outputs

Operate (ON) output :
 Contacts closed
 Stop (OFF) output :
 Contacts open
 *Upon pulse output, the (ON), (OFF) contacts close according to the output content. ((ON) and (OFF) refer to the junctions in the diagram.)

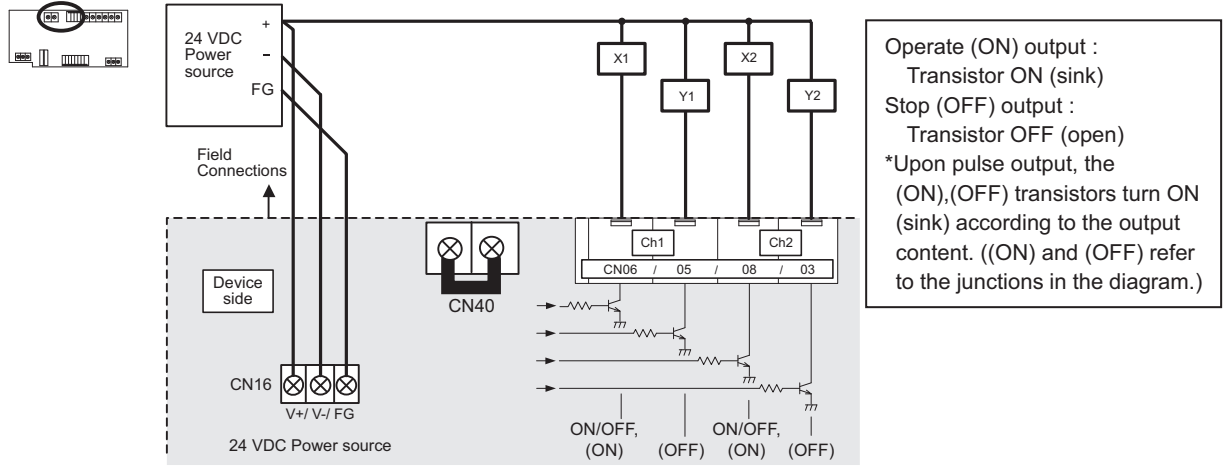

() is in the case of a pulse.

Tightening torque for terminal screws: 1 N·m

CAUTION

- To use X1 and Y1 relay, obtain one that satisfies the following specifications.
 - Operating coil
 - [Applied load]
 - MAX: 24 VDC, 5 W (Built-in diode)
 - MIN: 5 VDC, 2 mW (Built-in diode)
 - *1 AC loads cannot be connected.
 - *2 Provide a power supply (V1, V2) that matches the load and relay to be used.
- To drive a direct load, use ones within the following.
 - [Applied load]
 - MAX: 24 VDC, 5 W
 - MIN: 5 VDC, 2 mW
 - * AC loads cannot be connected.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.
 - If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.
- Do not connect the wires directly from the top of the control panel to the terminal block.
 - Moisture may enter this device along the wiring and cause electric shock or fire.

(b) Transistor Outputs (Open Collector)

Tightening torque for terminal screws: 1 N·m

() is in the case of a pulse.

NOTE

The junction terminal block CN40 (for 24 VDC) is provided.
Use them as relay terminals if necessary.

CAUTION

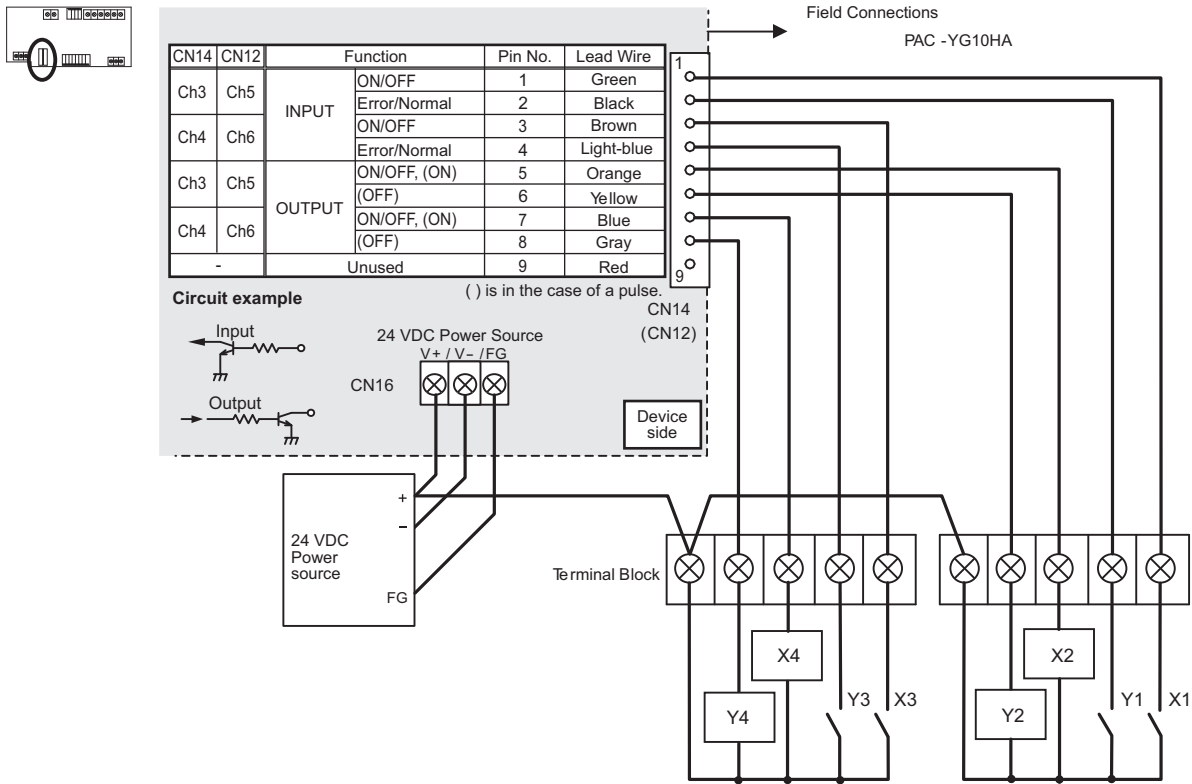

- When X1, X2, Y1 and Y2 relays are used, select ones that satisfy the following specifications.
 - Operating coil
 - Rated voltage: 24 VDC (Built-in diode)
 - Power consumption: 0.9 W or less
 - (*1) Be sure to use the ones with the voltages rated above.
Exceeding the rated voltage may affect the ON/OFF of other outputs.
 - (*2) When using a separate power supply for this device, connect GND of the power supply to V- of CN16 of the terminal block of this device.
 - (*3) Use a relay with a withstanding voltage of at least 2000 VAC between the coil and contact.
Otherwise, there is the likelihood of an electric shock or fire.
- Strip 12 ± 1 mm ($15/32 \pm 1/32$ in) of the wire coating and insert firmly into the terminal.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.
If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.
- Do not connect the wires directly from the top of the control panel to the terminal block.
Moisture may enter this device along the wiring and cause electric shock or fire.

2) Expansion Connectors (Channels 3 to 6)

(2-1) Expansion Inputs/Outputs

Purchase an optional external input/output adapter (model: PAC-YG10HA-E) when using expansion inputs/outputs.

PAC-YG66DCA has two expansion connectors, and up to two external input/output devices can be connected to each connector. An optional external input/output adapter is required for each connector used.

[Input]
 Contacts closed (24 VDC applied): Operating (ON); detected an error
 Contacts open : Stopped (OFF); detected as normal
 * Error/normal detection becomes inverted from contact open/closed logic for a b-contact setting.

[Output]
 Operate (ON) output : Transistor ON (sink)
 Stop (OFF) output : Transistor OFF(open)
 * Upon pulse output, the (ON), (OFF) transistors turn ON (sink) according to the output content. ((ON) and (OFF) refer to the junctions in the diagram.)

CAUTION

- When using X1, X2, X3, X4, Y1, Y2, Y3 and Y4 relays, select ones that satisfy the following specifications.
 Operating coil Rated voltage: 24 VDC (Built-in diode)
 Power consumption: 0.9 W or less
 (*1) Be sure to use the ones with the voltages rated above. Exceeding the rated voltage may affect the ON/OFF of other outputs.
 (*2) When using a separate power supply for this device, connect GND of the power supply to V- of CN16 of the terminal block of this device.
 (*3) Use a relay with a withstanding voltage of at least 2000 VAC between the coil and contact. Otherwise, there is the likelihood of an electric shock or fire.
- Select a contact with a minimum applicable load of 1 mADC or less for the input contact.
- Do not install alongside or in contact with other wires.

3. Interlock control

The DIDO controller (PAC-YG66DCA) has an interlock control function, which enables operation or set temperature change on the M-NET devices such as indoor units and also enables signal output to the contacts on the DIDO controller.

Interlock control covers the units connected to the DIDO controller with M-NET system.
 AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J must be connected to use the function.
 Ask your dealer for interlock control setting. The setting requires special tool support.

	Before using the interlock control, you must agree to the following.	
	1.	This feature must not be used for disaster prevention or security purpose. (Not designed to be used in situations that are life-threatening)
	2.	No functions must be added that allow the malfunctioning unit to run by defeating the safety features, such as an external ON/OFF switch or a short-circuit.
	3.	Those settings for the function that are not supported by the interlocked units must not be made. All the settings must be made within the specified range. (Failure to observe these precautions may result in malfunctions and failures.)
	4.	Perform a test run for interlock control, and confirm the correct settings and normal operation.
5.	The system must be configured in the way that integrates the operation of the interlocked fire and emergency control systems.	

Item	Content	Remarks
Number of events	24 events	1 event interlock with 1 unit
Determinant condition for interlock control	At input contact change	<ul style="list-style-type: none"> • Operation input ON/OFF • Error input Error/Normal
Interlock control contents (to be output)	1 action for 1 condition <ul style="list-style-type: none"> • ON/OFF operation of indoor units • Operation mode change of indoor units • Temperature setting of indoor units (*1) • Contact output to DIDO controller (*2) 	Interlock control covers the units connected to DIDO controllers with M-NET system. (*1) Temperature setting range: 19-28°C (Standard setting) (*2) DIDO controller itself or other DIDO controllers in the same M-NET system.
Other	Interlock control prohibition function is enabled at emergency stop from AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J	

Interlock control of DIDO controller (example)

Note: Do not use Interlock control function on both AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J and DIDO controller at the same time.

*1: Supply electric power from a power supply unit for the transmission line or an outdoor unit. Furthermore, the power consumption factor of the M-NET circuitry of this unit is "1/4".

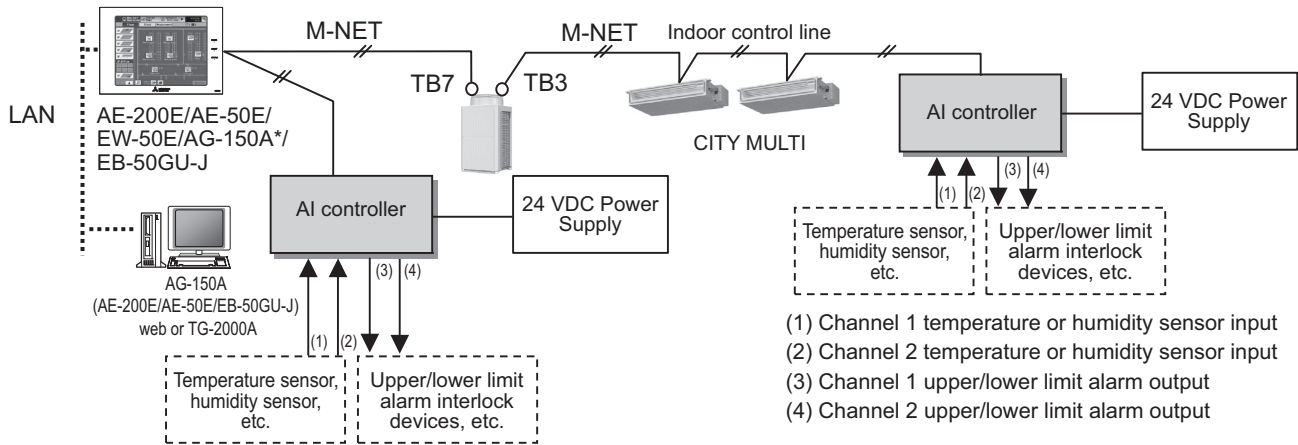

*2: Configure the dip switch settings for the analog input method to use.

*3: The measurement error for the system includes the measurement error for this unit, sensor, and wiring.

a%FS (full scale) = a% × ([measurement range's upper limit value] - [lower limit value])

*4: Settings for the interlock function are performed from the Maintenance Tool. For details, refer to the operation manual for the Maintenance Tool.

*5: M3 and M3.5 are sizes of the screw on the terminal block (ISO metric screw thread). The number indicates the screw diameter (mm).

* This figure omits the power supply line and only shows the transmission line.

<Restrictions>

Maximum of 50 units per AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J

However, the number of units that can be connected to a AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J is up to 50 including this device, an indoor unit, LOSSNAY unit, etc.

NOTE

- For the shield ground of the M-NET centralized control line, use single-point grounding at the power unit for the transmission line.
However, when supplying electric power to the M-NET centralized control line from the R410A series outdoor unit*1 without using a power supply unit for the transmission line, use single-point grounding at the TB7 of that outdoor unit. *1 : Except PUMY model.
Furthermore, when connecting the M-NET transmission line of this device to the M-NET indoor control line, use grounding at the TB3 for each outdoor unit system.
- If the M-NET transmission line of this device is connected to an M-NET indoor control line and the outdoor unit is down because, for example, the power supply is interrupted for servicing or there is a failure, the AI controller cannot be set and monitored from the system controller.
- The sensor connected to the AI controller can only be monitored from AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J Web browser and TG-2000A.
The sensor can be monitored from the AE-200E/AE-50E/AG-150A LCD.

(2). Parts Purchased Separately

Prepare the following parts to install this device.

Required Part	Specification
Unit fixing screws	M4 screw × 4 (* M4: ISO metric screw thread)
Power supply for this device	Commercially available power source: 24 VDC ±10% 0.2A (Minimum loading), SELV circuit, power line with grounding terminal Ripple noise: Lower than 200 mVp-p Compatible specification Authorized or CE marked products. Subject to regulations: - IEC60950 (or EN60950) - CISPR22/24 (or EN55022/24) - IEC61000-3-2/3-3 (or EN61000-3-2/3-3)
Power supply for sensors	A separate power supply for sensors may be required. In the case of 24 VDC voltage, the capacity of the power supply for this unit can be increased so that the power supply can be shared.
Power line	Use a sheathed vinyl cord or cable. At least 0.75 mm ² (AWG18)
M-NET transmission line	Type of the cable: Sheathed vinyl cords or cable which comply with the following specifications or equivalent. • CPEV ϕ 1.2 mm to ϕ 1.6 mm • CVVS 1.25 mm ² to 2 mm ² (AWG 16 to 14) * CPEV: PE insulated PVC jacketed shielded communication cable * CVVS: PVC insulated PVC jacketed shielded control cable PE: Polyethylene PVC: Polyvinyl chloride Power needs to be supplied to the M-NET circuitry of this device. Use an outdoor unit or a separately purchased power supply unit for the transmission line.
Signal lines (Sensor input lines)	Shows the size of the electric wire (copper wire) that is adapted to the terminal block of this device. Refer to the usage and cautionary items of the sensor when performing settings. However, use a line with shielded line. Electric wire size … (1)Solid wire: ϕ 0.65 mm (AWG21) - ϕ 1.2 mm (AWG16) (2)Stranded wire: 0.75 mm ² (AWG18) - 1.25 mm ² (AWG16) Single strand: At least ϕ 0.18 mm

[Parts to be Purchased Separately]

Name	Model	Application	Remark
Power supply unit	PAC-SC51KUA	Power supply to the M-NET transmission line	This is not required when power is to be supplied from an outdoor unit.

[Commercially available parts]

Part	Use	Remark
External 24 VDC power source	Supplies power to the AI controller.	Refer to "Power supply for this device" and "Power supply for sensors" in "Required Part" above for the capacity of the power supply.
Sensor	Measures temperature and humidity.	Temperature sensor (PAC-SE41TS-E) cannot be connected.

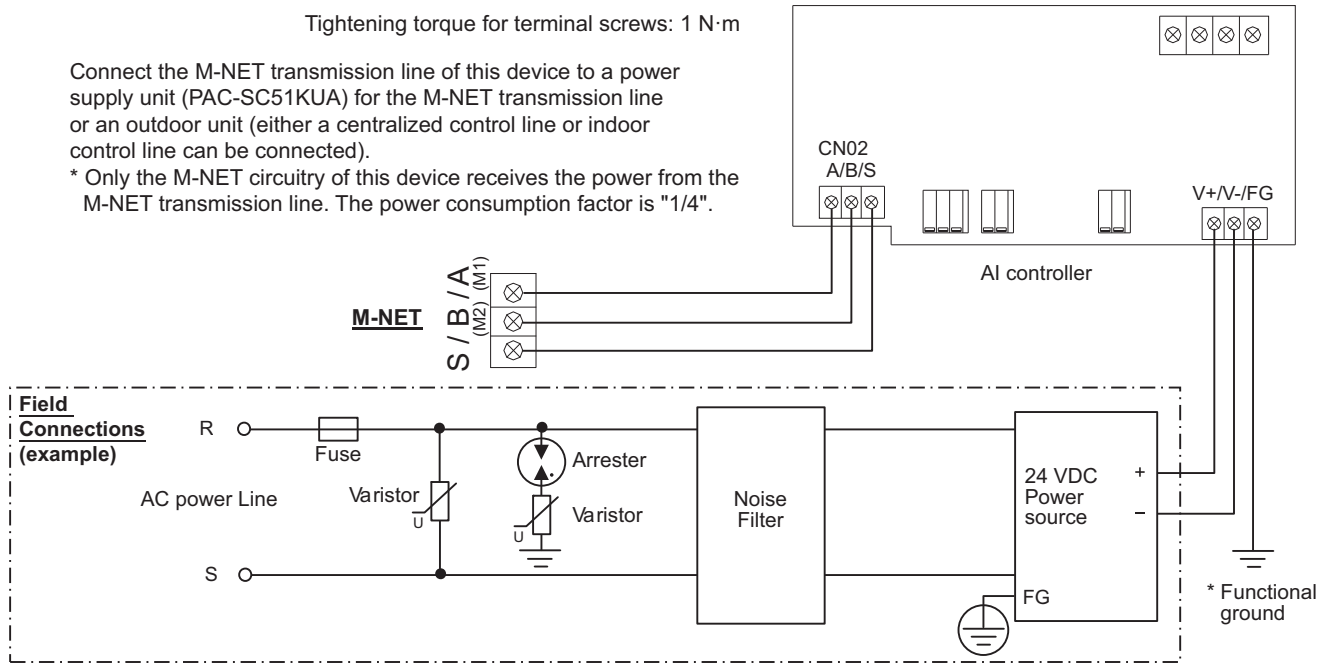

2. Wiring Instructions

(1). Connecting the Power and M-NET Transmission Lines

Tightening torque for terminal screws: 1 N·m

Connect the M-NET transmission line of this device to a power supply unit (PAC-SC51KUA) for the M-NET transmission line or an outdoor unit (either a centralized control line or indoor control line can be connected).

* Only the M-NET circuitry of this device receives the power from the M-NET transmission line. The power consumption factor is "1/4".

CAUTION

- Use a power line and M-NET transmission line that satisfy the specifications described in "1-(2). Parts Purchased Separately".
- Attach a circuit comprising the following components to the supply primary side of the 24 VDC power supply. (1) Varistor, (2) Arrester, (3) Noise filter, (4) Fuse
- It is important to pay attention to the polarity when connecting to the 24 VDC power supply terminal block. Connecting the positive and negative in the reverse order will cause a failure.
- Fix the power line and M-NET transmission line in place on the outside to ensure that the terminal block is not affected by any external force.
Not securely connecting and fixing the wires in place may cause heat generation and fire.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires. Cover the shielded line of the M-NET transmission line with materials such as vinyl tape and prevent short-circuiting with the plates.

NOTE

- If the M-NET transmission line of this device is connected to an M-NET indoor control line and the outdoor unit is down because, for example, the power supply is interrupted for servicing or there is a failure, the AI controller cannot be set and monitored from the system controller.
- Be sure to ground this device, PAC-SC51KUA and 24 VDC Power source.
Measurement accuracy may be affected if devices are not grounded.

(2). Connecting the Sensors

- For channel 1, select one of the following four types: Pt100 detection, 4 to 20 mA DC, 1 to 5 VDC, or 0 to 10 VDC analog input.
- For channel 2, select one of the following three types: 4 to 20 mA DC, 1 to 5 VDC, or 0 to 10 VDC analog input.
- The wire length depends on the specifications of the sensor. However, since the use of long wires makes the device susceptible to noise, using wires shorter than 12 m (39.4 ft) is recommended. Use a shielded line for the sensor line and connect to the FG terminal on this unit or the FG terminal on the control panel.

1) Channel 1 Pt100 Input

CAUTION

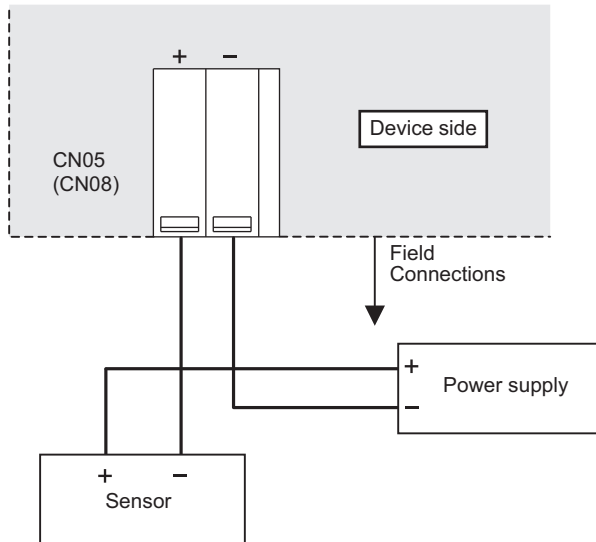

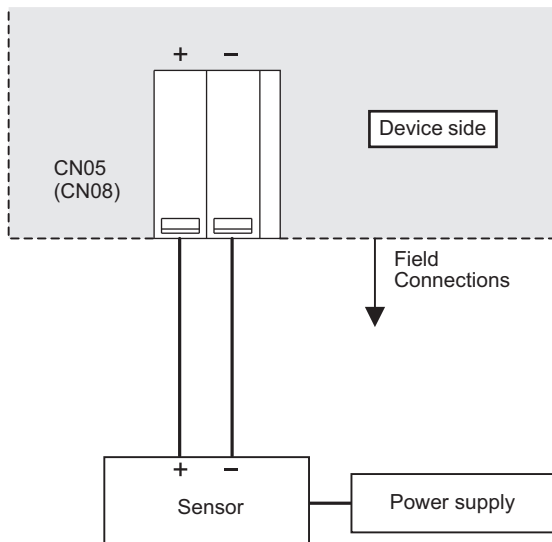

- Use a 3-wire system for Pt100.
- A/B polarity is important for Pt100.
Be sure to match the polarity when using Pt100.
- Do not install the sensor input line parallel to or near the M-NET transmission line or power line.
Also avoid loop wiring.
Furthermore, confirm the precautions for the sensor.
- Strip 12 ± 1 mm ($15/32 \pm 1/32$ in) of the wire coating and insert firmly into the terminal.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.
If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.

2) Channel 1 (Channel 2) Analog Input (4 to 20 mADC, 1 to 5 VDC, 0 to 10 VDC)

(a) When 1 to 5 VDC, 0 to 10 VDC, or 4 to 20 mADC (type for which power is supplied to the sensor) is connected

(b) When 4 to 20 mADC (type for which power is supplied to the signal line) is connected

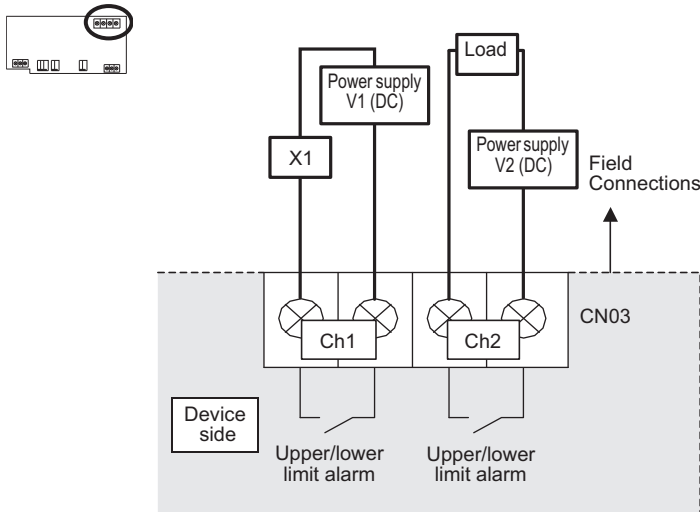

CAUTION

- Select a power supply that is suitable for the sensor to be used.
 - Do not install the sensor input line parallel to or near the M-NET transmission line or power line. Also avoid loop wiring.
 - Strip 12 ± 1 mm ($15/32 \pm 1/32$ in) of the wire coating and insert firmly into the terminal.
 - Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
 - Perform wiring so that the terminal block is not strained.
- If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.

(3). Connecting Alarm Setpoint Outputs (Non-voltage Contacts)

The maximum wire length is 100 m. However, since the use of long wires makes the device susceptible to noise, using wires no more than 10 m long is recommended.

Tightening torque for terminal screws: 1 N·m.

CAUTION

- To use X1 relay, obtain one that satisfies the following specifications.
 - Operating coil
 - [Applied load]
 - MAX: 24 VDC, 5 W (Built-in diode)
 - MIN: 5 VDC, 2 mW (Built-in diode)
 - *1 AC loads cannot be connected.
 - *2 Provide a power supply (V1, V2) that matches the load and relay to be used.
- To drive a direct load, use ones within the following.
 - [Applied load]
 - MAX: 24 VDC, 5 W
 - MIN: 5 VDC, 2 mW
 - * AC loads cannot be connected.
- Make sure that the copper wiring is not short-circuiting the plates (cover, lower case) or neighboring wires.
- Perform wiring so that the terminal block is not strained.
 - If strained, use a wire guide or junction terminal to alleviate the stress on the terminal block.
- Do not connect the wires directly from the top of the control panel to the terminal block.
 - Moisture may enter this device along the wiring and cause electric shock or fire.

3. Interlock control

AI controller (PAC-YG63MCA) has an interlock control function, which enables operation or set temperature change on the M-NET devices such as indoor units.

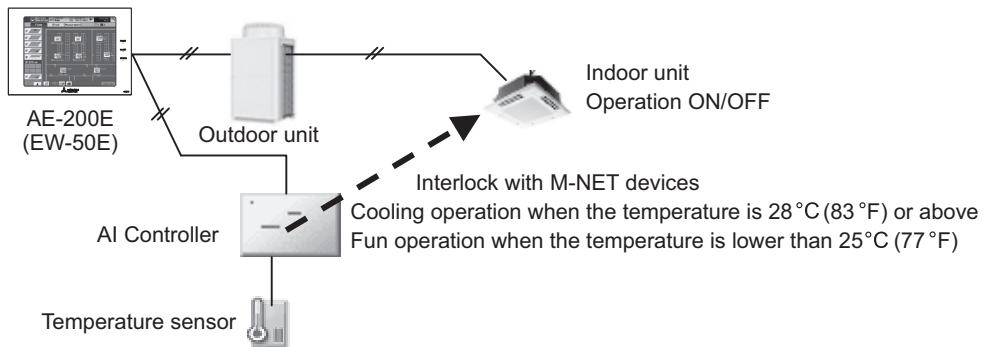

Interlock control covers the units connected to the AI controller with M-NET system. AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J must be connected to use the function.

Ask your dealer for interlock control setting. The setting requires special tool support.

CAUTION Before using the interlock control, you must agree to the following.

1. This feature must not be used for disaster prevention or security purpose.
(Not designed to be used in situations that are life-threatening)
2. No functions must be added that allow the malfunctioning unit to run by defeating the safety features, such as an external ON/OFF switch or a short-circuit.
3. Those settings for the function that are not supported by the interlocked units must not be made. All the settings must be made within the specified range.
(Failure to observe these precautions may result in malfunctions and failures.)
4. Perform a test run for interlock control, and confirm the correct settings and normal operation.
5. The system must be configured in the way that integrates the operation of the interlocked fire and emergency control systems.

Item	Content	Remarks
Number of events	24 events	1 event interlock with 1 unit
Determinant condition for interlock control	Measurement value Measurement interval is 1 to 7200 seconds.	<ul style="list-style-type: none"> • Exceeding measurement value in setting range • Exceeding upper/lower limit alarm detection value and cancellation value
Interlock control contents (to be output)	1 action for 1 condition <ul style="list-style-type: none"> • ON/OFF operation of indoor units • Operation mode change of indoor units • Temperature setting of indoor units (*1) • Contact output to DIDO controller 	Interlock control covers the units connected to AI controllers with M-NET system. (*1) Temperature setting range: 19-28°C (Standard setting)
Other	Interlock control prohibition function is enabled at emergency stop from AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J	

Interlock control of AI controller (example)

4-1. Y, R2 series

CITY MULTI system can be monitored or controlled with signal to/from the outside as every control board of Indoor unit or Outdoor unit has input/output signal connectors. Independent control to the individual Indoor or Outdoor can be carried out by using these connectors. Yet, for large-scale control, MELANS would be much easier. When using input/output connectors, a dedicated adapter (optional part) and a relay circuit needed to be prepared by the site. Following are some typical example. (Y series)

Table 4-1-1. Control can be achieved by using Outdoor input/output connectors.

Function	Usage	Using connector		Signal	Option
		PUHY	PURY		
Demand	Prohibiting cooling/heating operation (thermo OFF) by an external input to the outdoor unit. * It can be used as the demand control for each refrigerant system.	CN3D	CN3D	Input (level-signal)	Adapter for external input (PAC-SC36NA-E)
Low noise mode	Performs a low noise operation of the outdoor unit by an external input to the outdoor unit. * It can be used as the low noise operation device for each refrigerant system.				
Snow sensor signal input	Forces the outdoor unit to perform a fan operation by receiving signals from the snow sensor. *4	CN3S	CN3S		
Auto-changeover	Cooling/heating operation can be changed by an external input to the outdoor unit.	CN3N	-		
Energy-saving mode	The operation mode of the unit can be changed from normal cooling operation (performance priority) to energy-saving cooling mode by an external signal input.	CN3K	CN3K		
Operation status of the compressor	How to extract signals from the outdoor unit. * It can be used as an operation status display device.	CN51	CN51	Output (level-signal)	Adapter for external output (PAC-SC37SA-E)
Error status	* It can be used for an interlock operation with external devices.				

- *1 For details, refer to 1) through 4) shown below.
- *2 Low noise mode is valid when Dip SW6-8 on the outdoor unit is set to OFF. When DIP SW6-8 is set to ON, 4 levels of on-DEMAND are possible, using different configurations of low noise mode input and DEMAND input settings. When 2 or more outdoor units exist in one refrigerant circuit system, 8 levels of on-DEMAND are possible. When 3 outdoor units exist in one refrigerant circuit system, 12 levels of on-DEMAND are possible.
- *3 Low noise mode can be switched from ability main to low noise main with Dip SW6-7 on the outdoor unit. Dip SW6-7 OFF: ability main (ability main mode : The sound pressure level is reduced by limiting the maximum fan frequency under the following condition. Cooling mode : outdoor temp. (TH7) ≤ 30°C Heating mode : outdoor temp. (TH7) ≥ 3°C), ON: low noise main.
- *4 When multiple outdoor units exist in one refrigerant circuit system, settings on every outdoor unit (signal input) are required.
- *5 For detailed drawing, refer to "4-2. Outdoor unit input/output connector".

1) Table 4-1-2. SW6-8: OFF (Compressor ON/OFF, Low noise mode)

CN3D 1-3P	2-level of on-Demand *6
Open	100%(No Demand)
Short-circuit	0%
CN3D 1-2P	Low noise mode *7
Open	OFF
Short-circuit	ON

- *6 When SW6-8 on the outdoor unit in one refrigerant circuit system is set to ON (4 levels or 8 levels or 12 levels of on- DEMAND), this function cannot be used.
- *7 This function and the 4 levels or 8 levels on-DEMAND function can be used together. Input the order to CN3D 1-2P on the outdoor unit whose SW6-8 is set to OFF.

2) When SW6-8 on one outdoor unit in one refrigerant circuit system is set to ON (4 levels of on-DEMAND) (*8)

CN3D 1-3P	CN3D 1-2P	
	Open	Short-circuit
Open	100% (No DEMAND)	75%
Short-circuit	0%	50%

Note the following steps to be taken when using STEP DEMAND.
Example: When switching from 100% to 50%

Steps in DEMAND level setting	<WRONG>	100%	→	10%	→	50%
	<CORRECT>	100%	→	75%	→	50%

If the demand settings are switched in the wrong order listed as the wrong example above, the unit may go into thermo OFF mode. The percentage of the DEMAND listed in the table above is an approximate value based on the compressor volume and does not necessarily correspond with the capacity.

This function and the Low noise mode function cannot be used together.

3) When SW6-8 on the two outdoor units in one refrigerant circuit system is set to ON (8 levels of on-DEMAND) (*8,*9)

8 levels of on-DEMAND		No.2 CN3D					
		1-2P		Open		Short-circuit	
No.1 CN3D	1-2P	1-3P	Open	Short-circuit	Open	Short-circuit	
	Open	Open	100% (No DEMAND)	50%	88%	75%	
	Short-circuit	Short-circuit	50%	0%	38%	25%	
	Open	Open	88%	38%	75%	63%	
	Short-circuit	Short-circuit	75%	25%	63%	50%	

4) When SW6-8 on the all outdoor units in one refrigerant circuit system is set to ON (12 levels of on-DEMAND) (*9)

12 levels of on-DEMAND		No.2 CN3D									
		1-2P		Open				Short-circuit			
No.1 CN3D	1-2P	1-3P	Open		Short-circuit		Open		Short-circuit		
	Open	Open	Open	100%	67%	92%	84%	67%	34%	59%	50%
	Short-circuit	Short-circuit	Short-circuit	67%	34%	59%	50%	34%	0%	25%	17%
	Open	Open	92%	59%	84%	75%	59%	25%	50%	42%	
	Short-circuit	Short-circuit	84%	50%	75%	67%	50%	17%	42%	34%	

- *8 Input the order to CN3D on the outdoor unit whose SW6-8 is set to ON.
- *9 CN3D of No. 1, 2, 3 can be selected arbitrary with the outdoor unit whose SW6-8 is set to ON.

Table 4-1-3. Control can be achieved by using Indoor input/output connectors.

Function	Usage	Using connector	Signal
Remote/Local switching *1 ON/OFF *2*3	Indoor group can be controlled ON/OFF by an ON/OFF switching or contact input to the connector of the head Indoor in an Indoor group. It can be interlocked with timer, door, window, or other equipment to "Force stopping"	CN32	Input (level-signal)
ON/OFF *2*3	Indoor group can be controlled ON/OFF by an external pulse signal input to the connector of the head Indoor in an Indoor group.	CN51	Input (pulse-signal)
Demand	Indoor group can be controlled ON/OFF by an ON/OFF switching or contact input to the connector of every Indoor in an Indoor group.	CN52	Input (pulse-signal)
Monitoring ON/OFF state	Signal output from a head Indoor unit, presenting its Indoor group.	CN51	Output
Monitoring heating state	It can be used for monitoring or interlock with other equipment purpose and so on.	CN52	
Monitoring cooling/drying state		CN52	
Monitoring Error state	Signal output from every Indoor unit, for monitoring Error or Thermo-off (fan) state.	CN51	Output
Monitoring Thermo-OFF(fan) state	It can be used for monitoring or interlock with other equipment purpose and so on.	CN52	

*1. When switching to Remote, control at Local remote controller will NOT be effective, but the "CENTRALLY CONTROLLED" is displayed.

*2. MA or ME remote controller is needed for this function.

*3. If using ON/OFF input function, Automatic-address-start-up can not be performed to start-up the system at commissioning.

*4. If CITY MULTI use AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J and PLC software to control the Indoor unit via its external input/output connectors, Dip Switch 1-9 and Dip Switch 1-10 should be set to ON.

In this case, the input/output connectors act as normal connectors, functions mentioned at Table 4-1-3. are no more available.

Details are available at the PLC software Instruction Manual.

Table 4-1-4. ON/OFF control to each Indoor unit (group) by using Dip Switch 9 and 10 (SW1-9, SW1-10) of the Indoor unit.

Function	Operation on Indoor units	Setting Dip Switch *1*4	
		1-9	1-10
Auto ON	All indoor units will turn ON and automatically resume to its previous mode after 5 minutes from power recovery.	OFF	ON
Auto recovery	Indoor unit recovers to its previous state (ON/OFF, mode) after 5 minutes from power recovery.	ON	OFF
All OFF	Forced stopping regardless of Indoor units' state.	OFF	OFF

*1. The Dip Switch setting should be carried out on every Indoor unit in the group.

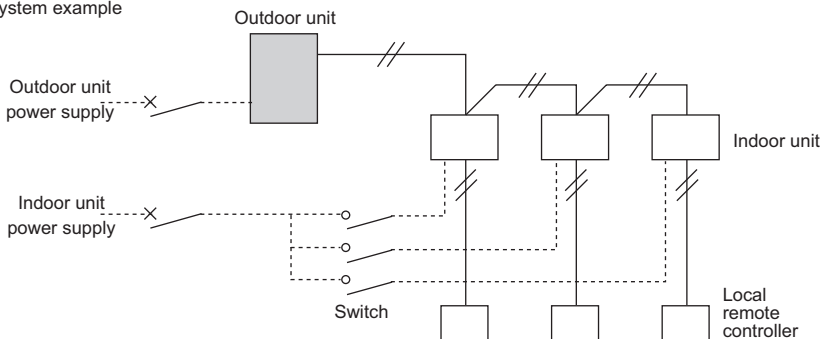

*2. Outdoor unit's power supply should NOT be cut. Otherwise, power supply to case heater of the compressor would be cut too, which may cause damage to the compressor.

*3. Above method can not be applied to the power ON/OFF of the drain pump and humidifier equipment.

*4. If CITY MULTI use AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J and PLC software to control the Indoor unit via its external input/output connectors, Dip Switch 1-9 and Dip Switch 1-10 should be set to ON.

In this case, the input/output connectors act as normal connectors, functions mentioned at Table 4-1-4. are no more available.

■ System example

Restart of the CITY MULTI needs to be careful. When no power supply to the outdoor unit, no power supply to the compressor case heater too. The compressor needed to be warmed up before running. When using above functions, power supply to the outdoor unit should be ensured.

Table 4-1-5. How to use Remote/Local switching connector CN32

State	Local remote controller display and operation	CN32-SW-1 for Local/Remote control switching	CN32-SW-2 for Remote "ON/OFF" operation
Local remote controller control	Operation is permitted	OFF	OFF
Remote STOP	"CENTRALLY CONTROLLED" flashing, "ON/OFF" at local remote controller is not possible.	ON	OFF
Remote START	"CENTRALLY CONTROLLED" flashing, "ON/OFF" at local remote controller is not possible.	ON	ON

* For details refer to CN32 in section "4-3. Indoor unit "-E" type input/output connector".

Table 4-1-6. Limitations to combining system controls

	Description	Control combining distant/local	Pulse ON/OFF	Power ON/OFF	Automatic recover
1	Control combining distant/local	CN32	-	X*1	X*1
2	Pulse ON/OFF	CN51	-	O	O
3	HA ON/OFF(JEMA)	CN51		O	O
4	Power ON/OFF	-		-	X
5	Automatic recover	-			-

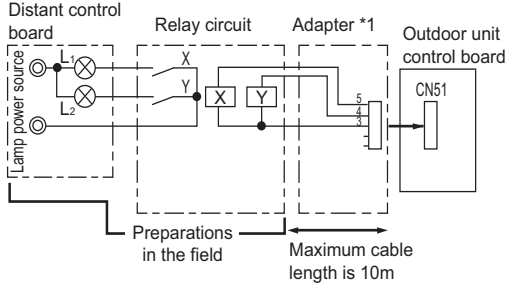

*1. Pulse ON/OFF, power ON/OFF and automatic recover can only be used when the remote/local setting CN32 is set to local. Therefore, always avoid this function when combining control.

4-2. Outdoor unit input/output connector

Caution:	1.Wiring should be covered by insulation tube with supplementary insulation.
	2.Use relays or switches with IEC or equivalent standard.
	3.The electric strength between accessible parts and control circuit should have 2750V or more.

4-2-1. Output

• State (CN51)

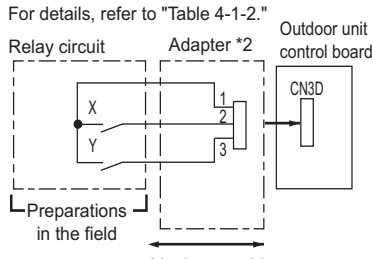

L1 : Outdoor unit error display lamp
 L2 : Compressor operation lamp (compressor running state)
 X, Y : Relay (coil =<0.9W : 12VDC)
 *1. Optional part : PAC-SC37SA-E or field supply.

4-2-2. Input

Y, R2 series

(1) Step demand and Low noise mode (CN3D)

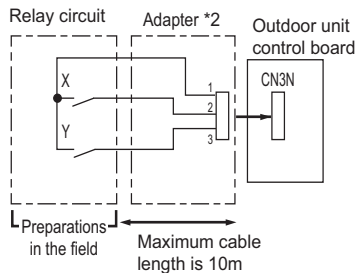

For details, refer to "Table 4-1-2."
 X : Low noise mode or demand
 Y : Demand
 X, Y : Relay Contact rating voltage $\geq 15VDC$
 Contact rating current $\geq 0.1A$
 Minimum applicable load $\leq 1mA$ at DC
 *2. Optional part : PAC-SC36NA-E or field supply.

(2) Low noise mode (CN3D + DipSW4-4 OFF)

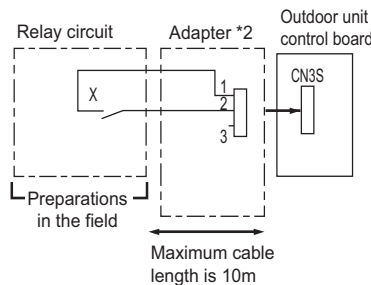

X : Relay Contact rating voltage $\geq 15VDC$
 Contact rating current $\geq 0.1A$
 Minimum applicable load $\leq 1mA$ at DC
 *2. Optional part : PAC-SC36NA-E or field supply.
 Low noise mode : The sound pressure level is reduced by controlling the maximum fan frequency and compressor frequency.
 -Note-
 The sound pressure level can not be reduced, when neither the fan frequency nor the compressor frequency are maximum.

(3) Autochangeover (CN3N) (R2 excluded)

X : Cooling / Heating
 Y : Validity / Invalidity of X
 X, Y : Relay Contact rating voltage $\geq 15VDC$
 Contact rating current $\geq 0.1A$
 Minimum applicable load $\leq 1mA$ at DC
 *2. Optional part : PAC-SC36NA-E or field supply.

(4) Snow sensor (CN3S)

X : Relay Contact rating voltage $\geq 15VDC$
 Contact rating current $\geq 0.1A$
 Minimum applicable load $\leq 1mA$ at DC
 *2. Optional part : PAC-SC36NA-E or field supply.
 Snow sensor : The outdoor fan runs when X is closed in stop mode or thermostat mode.

(5) Energy-saving mode (CN3K)

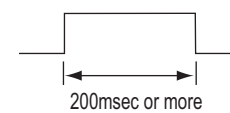

X : Energy-saving mode command
 X : Relay Contact rating voltage $\geq DC15V$
 Contact rating current $\geq 0.1A$
 Minimum applicable load $\leq 1mA$ at DC
 *2. Optional part : PAC-SC36NA-E or field supply.

		X	
		OFF	ON
Y	OFF	Normal	
	ON	Cooling	Heating

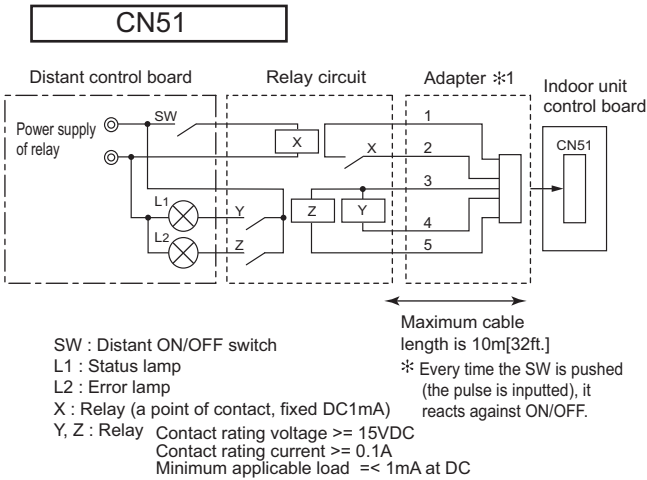

4-3. Indoor unit "-E" type input/output connector

 Caution:	1.Wiring should be covered by insulation tube with supplementary insulation.
	2.Use relays or switches with IEC or equivalent standard.
	3.The electric strength between accessible parts and control circuit should have 2750V or more.

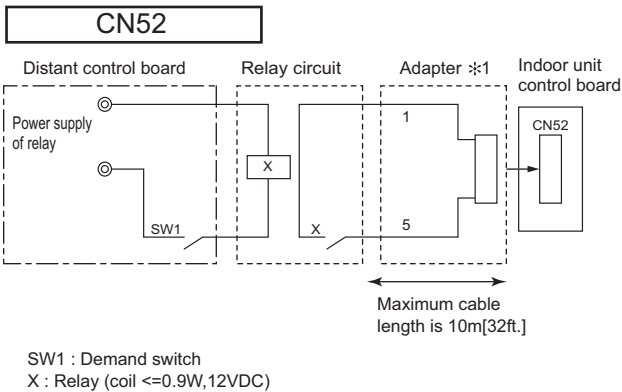

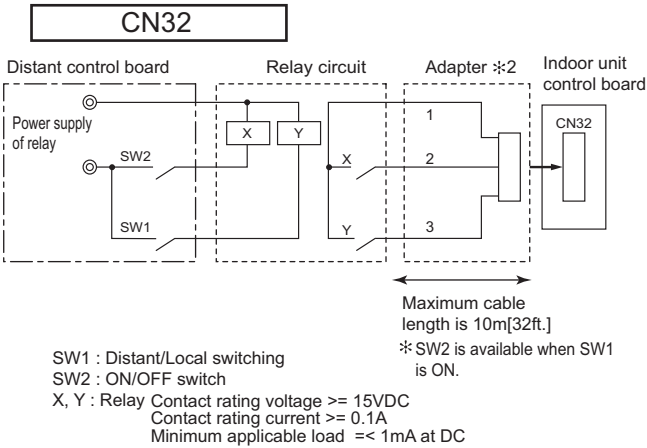

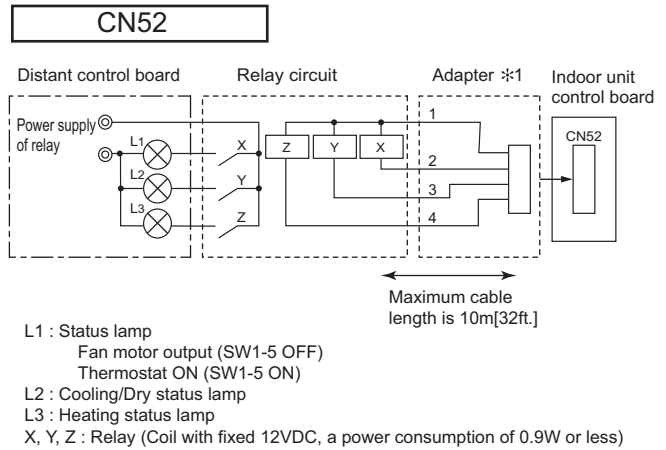

● ON/OFF (Pulse) input specification

Item	Description
Input signal	Pulse sign (a connect)
Standard of pulse	 200msec or more

● Input

● Output

SW1	Indoor unit
ON	Forced thermo-OFF
OFF	Normal running

* 1. Optional part : PAC-SA88HA-E or field supply
 * 2. Optional part : PAC-SE55RA-E or field supply

1-1. General cautions

- ① Follow ordinance of your governmental organization for technical standard related to electrical equipment, wiring regulations, and guidance of each electric power company.
- ② Wiring for control (hereinafter referred to as transmission cable) shall be (50mm[1-5/8in.] or more) apart from power source wiring so that it is not influenced by electric noise from power source wiring. (Do not insert transmission cable and power source wire in the same conduit.)
- ③ Be sure to provide designated grounding work to outdoor unit.
- ④ Give some allowance to wiring for electrical part box of indoor and outdoor units, because the box is sometimes removed at the time of service work.
- ⑤ Never connect 380~415V(220~240V) power source to terminal block of transmission cable. If connected, electrical parts will be damaged.
- ⑥ Use 2-core shield cable for transmission cable. If transmission cables of different systems are wired with the same multiple-core cable, the resultant poor transmitting and receiving will cause erroneous operations.
- ⑦ When extending the transmission line, make sure to extend the shield cable as well.

1-3. Power cable specifications

PUHY-P-YKB-A1

Thickness of wire for main power supply, capacities of the switch and system impedance

	Model	Minimum wire thickness (mm ²)			Ground-fault interrupter *1	Local switch (A)		Breaker for wiring (A) (Non-fuse breaker)	Max. Permissible System Impedance
		Main cable	Branch	Ground		Capacity	Fuse		
Outdoor unit	PUHY-P200YKB-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	25	25	30	*2
	PUHY-P250YKB-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PUHY-P300YKB-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PUHY-P350YKB-A1	6.0	-	6.0	40A 100mA 0.1sec. or less	40	40	40	0.25Ω
	PUHY-P400YKB-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.22Ω
	PUHY-P450YKB-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.19Ω
Total operating current of the indoor unit	F0 = 16A or less *3	1.5	1.5	1.5	20A current sensitivity *4	16	16	20	(apply to IEC61000-3-3)
	F0 = 25A or less *3	2.5	2.5	2.5	30A current sensitivity *4	25	25	30	(apply to IEC61000-3-3)
	F0 = 32A or less *3	4.0	4.0	4.0	40A current sensitivity *4	32	32	40	(apply to IEC61000-3-3)

*1 The Ground-fault interrupter should support Inverter circuit.
The Ground-fault interrupter should combine using of local switch or wiring breaker.
*2 Meet technical requirements of IEC61000-3-3

*3 Please take the larger of F1 or F2 as the value for F0.
F1 = Total operating maximum current of the indoor units × 1.2
F2 = {V1 × (Quantity of Type1)/C} + {V1 × (Quantity of Type2)/C} + {V1 × (Quantity of Type3)/C} + {V1 × (Quantity of Others)/C}

Indoor unit		V1	V2
Type1	PLFY-VBM, PMFY-VBM, PEFY-VMS, PCFY-VKM, PKFY-VHM, PKFY-VKM, PFFY-VKM, PFFY-VLRMM	18.6	2.4
Type2	PEFY-VMA	38	1.6
Type3	PEFY-VMHS	13.8	4.8
Others	Other indoor unit	0	0

C: Multiple of tripping current at tripping time 0.01s
Please pick up "C" from the tripping characteristic of the breaker.
<Example of "F2" calculation>
*Condition PEFY-VMS × 4 + PEFY-VMA × 1, C = 8 (refer to right sample chart)
F2 = 18.6 × 4/8 + 38 × 1/8
= 14.05
→ 16 A breaker (Tripping current = 8 × 16 A at 0.01s)

*4 Current sensitivity is calculated using the following formula.
G1 = (V2 × Quantity of Type1) + (V2 × Quantity of Type2) + (V2 × Quantity of Type3) + (V2 × Quantity of Others) + (V3 × Wire length [km])

G1	Current sensitivity	Wire thickness	V3
30 or less	30 mA 0.1sec or less	1.5 mm ²	48
100 or less	100 mA 0.1sec or less	2.5 mm ²	56
		4.0 mm ²	66

- Use dedicated power supplies for the outdoor unit and indoor unit. Ensure OC and OS are wired individually.
- Bear in mind ambient conditions (ambient temperature, direct sunlight, rain water, etc.) when proceeding with the wiring and connections.
- The wire size is the minimum value for metal conduit wiring. If the voltage drops, use a wire that is one rank thicker in diameter. Make sure the power-supply voltage does not drop more than 10%. Make sure that the voltage imbalance between the phases is 2% or less.
- Specific wiring requirements should adhere to the wiring regulations of the region.
- Power supply cords of parts of appliances for outdoor use shall not be lighter than polychloroprene sheathed flexible cord (design 60245 IEC57). For example, use wiring such as YZW.
- A switch with at least 3 mm contact separation in each pole shall be provided by the Air conditioner installation.

⚠ WARNING

- Be sure to use specified wires for connections and ensure no external force is imparted to terminal connections. If connections are not fixed firmly, heating or fire may result.
- Be sure to use the appropriate type of overcurrent protection switch. Note that generated overcurrent may include some amount of direct current.

⚠ CAUTION

- The breakers for current leakage should support Inverter circuit. (e.g. Mitsubishi Electric's NV-S series or equivalent). If no earth leakage breaker is installed, it may cause an electric shock.
- Breakers for current leakage should combine using of switch.
- Do not use anything other than a breaker with the correct capacity. Using a breaker of too large capacity may cause malfunction or fire.
- If a large electric current flows due to malfunction or faulty wiring, earth-leakage breakers on the unit side and on the upstream side of the power supply system may both operate. Depending on the importance of the system, separate the power supply system or take protective coordination of breakers.

Note

- This device is intended for the connection to a power supply system with a maximum permissible system impedance shown in the above table at the interface point (power service box) of the user's supply.
- The user must ensure that this device is connected only to a power supply system which fulfils the requirement above. If necessary, the user can ask the public power supply company for the system impedance at the interface point.
- This equipment complies with IEC 61000-3-12 provided that the short-circuit power Ssc is greater than or equal to Ssc (*2) at the interface point between the user's supply and the public system. It is the responsibility of the installer or user of the equipment to ensure, by consultation with the distribution network operator if necessary, that the equipment is connected only to a supply with a short-circuit power Ssc greater than or equal to Ssc (*2).

*1 The Ground-fault interrupter should support Inverter circuit. (e.g. Mitsubishi Electric's NV-S series or equivalent).
 *2 Ground-fault interrupter should combine using of local switch or wiring breaker.
 *3 It shows data for B-type fuse of the breaker for current leakage.
 *4 If a large electric current flows due to malfunction or faulty wiring, earth-leakage breakers on the unit side and on the centralized controller side may both operate.
 Depending on the importance of the system, separate the power supply system or take protective coordination of breakers.

The local standards and/or regulations is applicable at a higher priority.
 1-4-2. PUHY-P400, 450, 500, 550, 600, 650, 700, 750, 800, 850, 900YSKB-A1

- Note:
- The transmission cable is not-polarity double-wire.
 - Symbol \odot means a screw terminal for wiring.
 - The shield wire of transmission cable should be connected to the grounding terminal at Outdoor unit. All shield wire of M-Net transmission cable among Indoor units should be connected to the S terminal at Indoor unit or all shield wire should be connected together. The broken line at the scheme means shield wire.
 - When the Outdoor unit connected with system controller, power-supply to TB7 of the outdoor unit(s) is needed. The connector change from CN41 to CN40 at one of the outdoor units will enable the outdoor unit to supply power to TB7, or an extra power supplying unit PAC-SC51KUA should be used. The transmission cable (above 1.25mm², shielded, CVVS/CPEVS/MVVS) among Outdoor units and system controllers is called central control transmission cable. The shield wire of the central control transmission cable must be grounded at the Outdoor unit whose CN41 is changed to CN40. When the power supplying unit PAC-SC51KUA is used, connect the shielded cable to the ground terminal on the PAC-SC51KUA.
 - MA R/C transmission cable (0.3-1.25mm²) must be less than 200m in length, while ME R/C transmission cable (0.3-1.25mm²) must be less than 10m in length. But transmission cable to the ME R/C can be extended using a M-NET cable (>=1.25mm²) when the length is counted in the M-Net length. Both Compact MA and ME R/C transmission cables size 0.75-1.25mm² in thickness.
 - MA remote controller and ME remote controller should not be grouped together. When a PAR-31MAAE is connected to a group, no other MA remote controllers can be connected to the same group.
 - If using 1 or 2 (main/sub) MA remote controller to control more than 1 Indoor unit, use MA transmission cable to connect all the TB15 terminals of the Indoor units. It is called "Grouping". If using 1 or 2 (main/sub) ME remote controller control more than 1 indoor unit, set address to Indoor unit and ME remote controller. For the method, refer to 2-4. "Address setting".
 - Indoor board consumes power from TB3. The power balance should be considered according to System Design 2-3 "System configuration restrictions".
 - If Transmission booster is needed, be sure to connect the shield wires to the both sides to the booster.
 - The critical current for choosing power source equipment is approximate 1.4 times of total rated current of the Outdoor unit(s) or Indoor unit(s).
 - Numbers shown with () indicates a diameter of the compact remote controller.
 - When System controller (SC) is connected to the system, turn the SW5-1 on.
 - The phases of electricity power must be confirmed to be right used. Phase-reverse, or phase-missing could break the controllers.

2-1. Transmission cable length limitation

2-1-1. Using MA Remote controller

Long transmission cable causes voltage down, therefore, the length limitation should be obeyed to secure proper transmission.

Max. length via Outdoor (M-NET cable)	$L1+L2+L3+L4, L1+L2+L6+L7, L3+L4+L6+L7$	$\leq 500m[1640ft.]$	1.25mm ² [AWG16] or thicker
Max. length to Outdoor (M-NET cable)	$L1+L8, L3+L4, L6, L2+L6+L8, L7$	$\leq 200m[656ft.]$	1.25mm ² [AWG16] or thicker
Max. length from MA to Indoor	$a1+a2, a1+a2+a3+a4$	$\leq 200m[656ft.]$	0.3-1.25 mm ² [AWG22-16]
24VDC to AG-150A	n	$\leq 50m[164ft.]$	0.75-2.0 mm ² [AWG18-14]

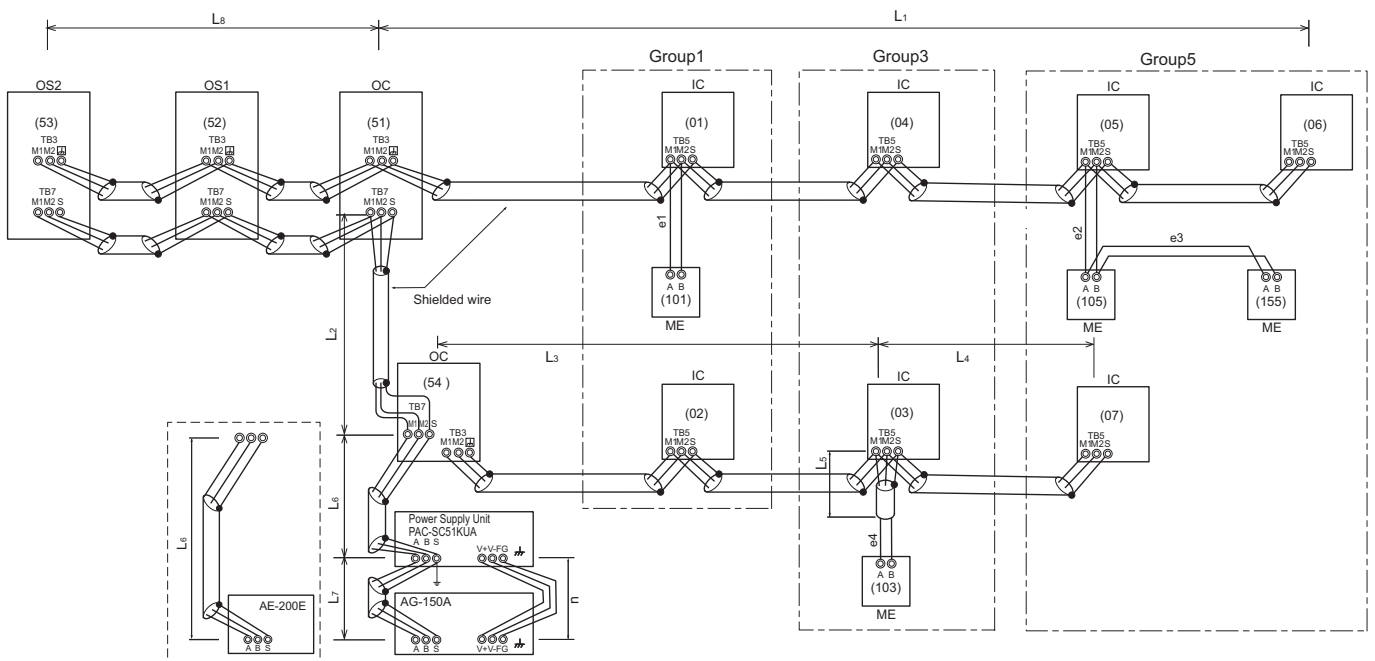

OC, OS1, OS2 : Outdoor unit controller; IC: Indoor unit controller; MA: MA remote controller

2-1-2. Using ME Remote controller

Long transmission cable causes voltage down, therefore, the length limitation should be obeyed to secure proper transmission.

Max. length via Outdoor (M-NET cable)	$L1+L2+L3+L4, L1+L2+L6+L7, L1+L2+L3+L5, L3+L4+L6+L7$	$\leq 500m[1640ft.]$	1.25mm ² [AWG16] or thicker
Max. length to Outdoor (M-NET cable)	$L1+L8, L3+L4, L6, L2+L6+L8, L7, L3+L5$	$\leq 200m[656ft.]$	1.25mm ² [AWG16] or thicker
Max. length from ME to Indoor	$e1, e2+e3, e4$	$\leq 10m[32ft.]*1$	0.3-1.25 mm ² [AWG22-16] *1
24VDC to AG-150A	n	$\leq 50m[164ft.]$	0.75-2.0 mm ² [AWG18-14]

*1. If the length from ME to Indoor exceed 10m, use 1.25 mm² [AWG16] shielded cable, but the total length should be counted into Max. length via Outdoor.

OC, OS1, OS2: Outdoor unit controller; IC: Indoor unit controller; ME: ME remote controller

2-2. Transmission cable specifications

	Transmission cables (Li)	M-NET remote controller cables	MA Remote controller cables
Type of cable	Shielding wire (2-core) CVVS, CPEVS or MVVS	Sheathed 2-core cable (unshielded) CVV	
Cable size	More than 1.25 mm ² [AWG16]	0.3 ~ 1.25 mm ² [AWG22~16] (0.75 ~ 1.25 mm ² [AWG18~16])*1	0.3 ~ 1.25 mm ² [AWG22 ~16] *2
Remarks	Max length: within 200 m	When 10 m [32ft] is exceeded, use cables with the same specification as transmission cables.	Max length: 200 m [656ft] *3

*1 Connected with PZ-52SF.

*2 To wire PAR-31MAA(E), Simple MA remote controller use a wire with a diameter of 0.3 mm² [AWG22]

*3 When a PAR-31MAA(E) and other MA remote controllers are connected in the same group, the maximum length of cable should be 100 m.

CVVS, MVVS: PVC insulated PVC jacketed shielded control cable
CPEVS: PE insulated PVC jacketed shielded communication cable
CVV: PV insulated PVC sheathed control cable

2-3. System configuration restrictions

2-3-1. Common restrictions for the CITYMULTI system

For each Outdoor unit, the maximum connectable quantity of Indoor unit is specified at its Specifications table.

- A) 1 Group of Indoor units can have 1-16 Indoor units;
*OA processing unit GUF-RD(H) is considered as Indoor unit.
- B) Maximum 2 remote controllers for 1 Group;
*MA/ME remote controllers cannot be present together in 1group.
*When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.
- C) 1 LOSSNAY unit can interlock maximum 16 Indoor units; 1 Indoor unit can interlock only 1 LOSSNAY unit.
- D) Maximum 3 System controllers are connectable when connecting to TB3 of the Outdoor unit.
- E) Maximum 6 System controllers are connectable when connecting to TB7 of the Outdoor unit, if the transmission power is supplied by the Outdoor unit.
- F) 4 System controllers or more are connectable when connecting to TB7 of the Outdoor unit, if the transmission power is supplied by the power supply unit PAC-SC51KUA. Details refer to 2-3-3-C.
*System controller connected as described in D) and E) would have a risk that the failure of connected Outdoor unit would stop power supply to the System controller.

2-3-2. Ensuring proper communication power for M-NET

In order to ensure proper communication among Outdoor unit, Indoor unit, LOSSNAY, and OA processing unit GUF-RD(H), and Controllers, the transmission power situation for the M-NET should be observed. In some cases, Transmission booster should be used. Taking the power consumption of Indoor unit sized P15-P140 as 1, the equivalent power consumption or supply of others are listed at Table 2-3-1 and Table 2-3-2.

Table 2-3-1 The equivalent power consumption

Indoor, OA unit	Indoor unit	BC controller	PWFY			MARC. LOSSNAY	ME Remote Contr.		System Contr.			ON/OFF Contr.	MN Converter	Outdoor unit	
Sized P15-P140 GUF-50, 100	Sized P200, P250	CMB	P100VM -E-BU	P100VM -E1-AU P100VM -E2-AU	P200VM -E1-AU P200VM -E2-AU	PAR-31MAA(E) PAC-YT52CRA PAR-FA32MA LGH-RVX-E PZ-61DR-E PZ-43SMF-E	PAC-YG60MCA PAC-YG66DCA PAC-YG63MCA	PAR-U02MEDA PAC-IF01AHC	AE-200E AE-50E	AG-150A EB-50GU-J	AT-50B	EW-50E	PAC -YT40ANRA	CMS-MNG-E	TB7 power consumption
1	7	2	6	1	5	0	0.25	0.5	0	0.5	4	0	1	2	0

*RC : Remote Controller

Table 2-3-2 The equivalent power supply

Transmission Booster	Power supply unit	Expansion controller	BM ADAPTER	System Controller		Outdoor unit	Outdoor unit
PAC-SF46EPA	PAC-SC51KUA	PAC-YG50ECA	BAC-HD150	AE-200E/AE-50E	EW-50E	Connector TB3 and TB7 total *	Connector TB7 only
25	5	6	6	0 ¹⁾	1.5	32	6

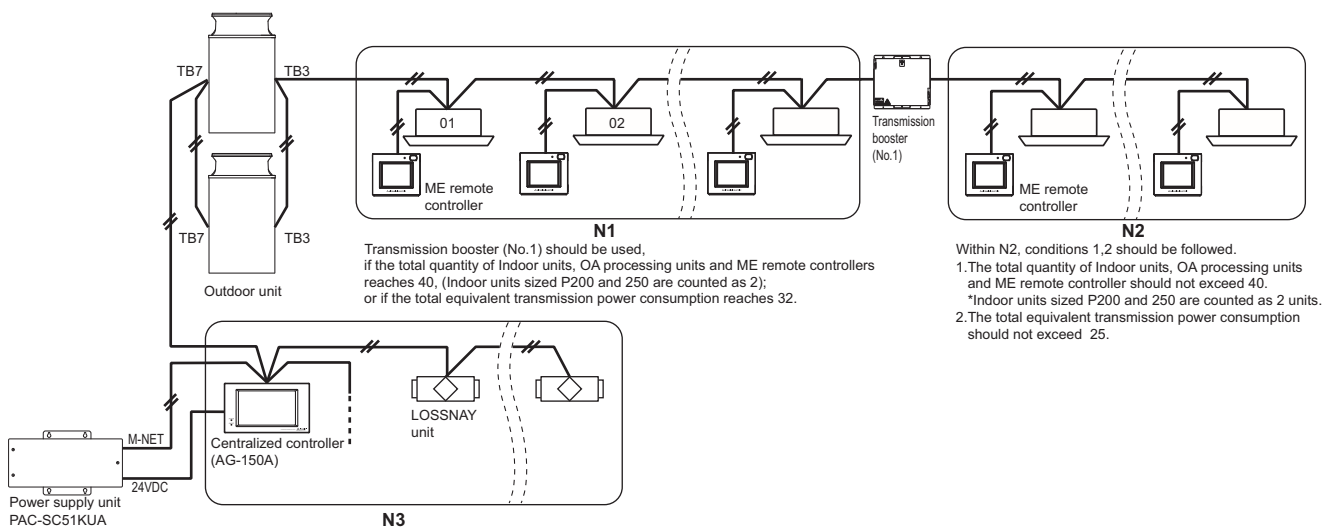

*If PAC-SC51KUA is used to supply power at TB7 side, no power supply need from Outdoor unit at TB7, Connector TB3 itself will therefore have 32. Not applicable to the PUMY model.

*1 AE-200E/AE-50E has a built-in function to supply power to the M-NET transmission line. The amount of power that an AE-200E or an AE-50E can supply is equivalent to the power required by an MN converter (CMS-MNG-E) that is used for maintenance.

With the equivalent power consumption values in Table 2-3-1 and Table 2-3-2, PAC-SF46EPA can be designed into the air-conditioner system to ensure proper system communication according to 2-3-2-A, B, C.

- 2-3-2-A) Firstly, count from TB3 at TB3 side the total quantity of Indoor units, OA processing units, ME remote controller, and System controllers. If the total quantity reaches 40, a PAC-SF46EPA should be set. In this case, Indoor units sized P200 and 250 are counted as 2 indoor units, but MA remote controller(s), PZ-61DR-E, and PZ-43SMF-E are NOT counted.
- 2-3-2-B) Secondly, count from TB7 side to TB3 side the total transmission power consumption. If the total power consumption reaches 32, a PAC-SF46EPA should be set. Yet, if a PAC-SC51KUA or another controller with a built-in power supply, such as PAC-YG50ECA, is used to supply power at TB7 side, count from TB3 side only.
- 2-3-2-C) Thirdly, count from TB7 at TB7 side the total transmission power consumption, If the total power consumption reaches 6, a PAC-SF46EPA should be set.

■ System example

2-3-3. Ensuring proper power supply to System controller

The power to System controller (excluding AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) is supplied via M-NET transmission line. M-NET transmission line at TB7 side is called Centralized control transmission line while one at TB3 side is called Indoor-Outdoor transmission line. There are 3 ways to supply power to the System controller .

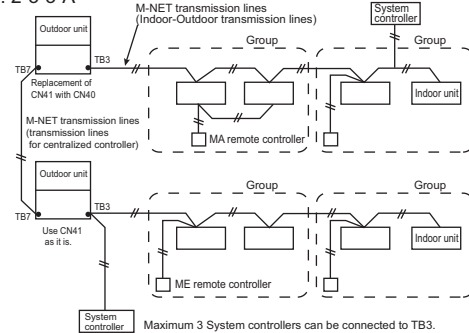

- A) Connecting to TB3 of the Outdoor unit and receiving power from the Outdoor unit.
- B) Connecting to TB7 of the Outdoor unit and receiving power from the Outdoor unit.
- C) Connecting to TB7 of the Outdoor unit but receiving power from power supply unit PAC-SC51KUA.

* System controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) have a built-in function to supply power to the M-NET transmission lines, so no power needs to be supplied to the M-NET transmission lines from the outdoor units or from PAC-SC51KUA.

2-3-3-A. When connecting to TB3 of the Outdoor unit and receiving power from the Outdoor unit.

Maximum 3 System controllers can be connected to TB3. If there is more than 1 Outdoor unit, it is necessary to replace power supply switch connector CN41 with CN40 on one Outdoor unit.

Fig. 2-3-3-A

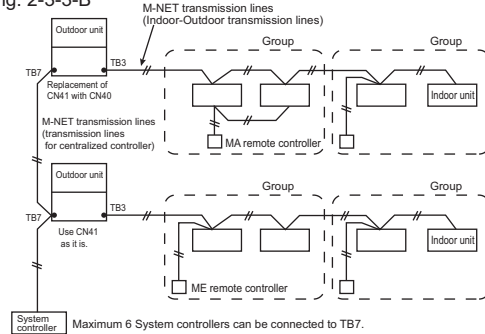

Maximum 3 System controllers can be connected to TB3.

2-3-3-B. When connecting to TB7 of the Outdoor unit and receiving power from the Outdoor unit.

Maximum 6 System controllers can be connected to TB7 and receiving power from the Outdoor unit. It is necessary to replace power supply switch connector CN41 with CN40 on one Outdoor unit.

Fig. 2-3-3-B

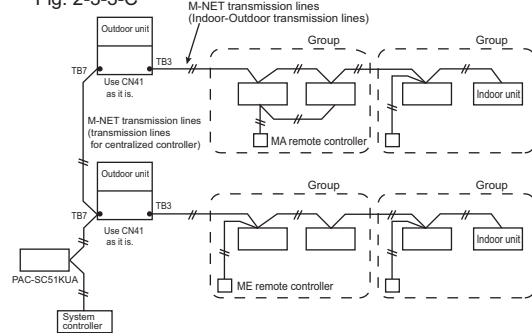

Maximum 6 System controllers can be connected to TB7.

2-3-3-C. When connecting to TB7 of the Outdoor unit but receiving power from PAC-SC51KUA.

When using PAC-SC51KUA to supply transmission power, the power supply connector CN41 on the Outdoor units should be kept as it is. It is also a factory setting. 1 PAC-SC51KUA supports maximum 1 AG-150A unit due to the limited power 24VDC at its TB3. However, 1 PAC-SC51KUA supplies transmission power at its TB2 equal to 5 Indoor units, which is referable at Table 2-3-2. If PZ-52SF-E, System controller, ON/OFF controller connected to TB7 consume transmission power more than 5 (Indoor units), Transmission booster PAC-SF46EPA is needed. PAC-SF46EPA supplies transmission power equal to 25 Indoor units.

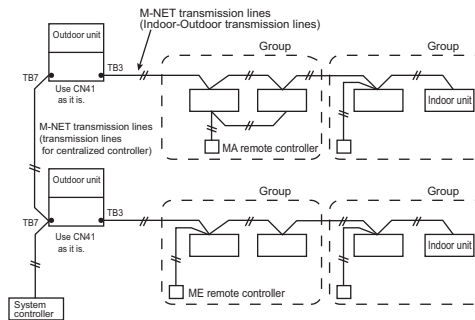

Fig. 2-3-3-C

CAUTION

- AG-150A*1 is recommended to connect to TB7 because it performs back-up to a number of data. In an air conditioner system has more than 1 Outdoor units, AG-150A receiving transmission power through TB7 on one of the Outdoor units would have a risk that the connected Outdoor unit failure would stop power supply to AG-150A, and disrupt the whole system. When applying apportioned electric power function, AG-150A is necessary to be connected to TB7 and has its own power supply unit PAC-SC51KUA.*2
- *1: AG-150A is an example model of system controllers.
- *2: Power supply unit PAC-SC51KUA is for AG-150A.
- How to connect system controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) to a given system System controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) have a built-in function to supply power to the M-NET transmission lines, so no power needs to be supplied to the M-NET transmission lines from the outdoor units or from PAC-SC51KUA. Leave the power supply connector on the outdoor unit connected to CN41 as it is. Refer to 2-3-2 for information about the power-supply capacity of each system controller (EW-50E, BAC-HD150, LM-AP) to the low-level system controllers.

Fig. 2-3-3-D

2-3-4. Power supply to LM-AP

1-phase 220-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when connecting only the LM-AP. Yet, make sure to change the power supply changeover connector CN41 to CN40 on the LM-AP.

2-3-5. Power supply to expansion controller

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary.

The expansion controller supplies power through TB3, which equals 6 indoor units. (refer to Table 2-3-2)

2-3-6. Power supply to BM ADAPTER

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when only BM ADAPTER is connected.

Yet, make sure to move the power jumper from CN41 to CN40 on the BM ADAPTER.

2-3-7. Power supply to AE-200E/AE-50E/EW-50E

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when connecting only the AE-200E/AE-50E/EW-50E.

2-4. Address setting

2-4-1. Switch operation

In order to constitute CITY MULTI in a complete system, switch operation for setting the unit address No. and connection No. is required.

- ① Address No. of outdoor unit, indoor unit and remote controller.
The address No. is set at the address setting board.
In the case of R2 system, it is necessary to set the same No. at the branch No. switch of indoor unit as that of the BC controller connected. (When connecting two or more branches, use the lowest branch No.)

② Caution for switch operations

- Be sure to shut off power source before switch setting. If operated with power source on, switch can not operate properly.
- No units with identical unit address shall exist in one whole air conditioner system. If set erroneously, the system can not operate.

③ MA remote controller

- When connecting only one remote controller to one group, it is always the main remote controller.
When connecting two remote controllers to one group, set one remote controller as the main remote controller and the other as the sub remote controller.
- The factory setting is "Main".

PAR-31MAA(E)

The MA remote controller does not have the switches listed above.
Refer to the installation manual for the function setting.

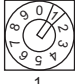

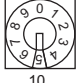

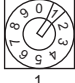

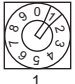

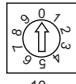

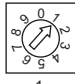

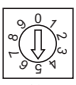

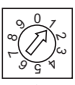

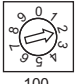

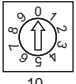

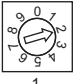

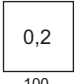

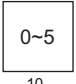

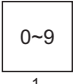

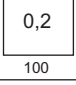

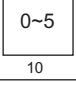

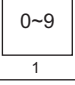

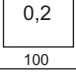

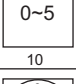

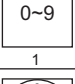

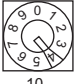

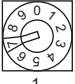

PAC-YT52CRA

Setting the dip switches

There are switches on the back of the top case. Remote controller Main/Sub and other function settings are performed using these switches. Ordinarily, only change the Main/Sub setting of SW1.
(The factory settings are ON for SW1, 2, and 3 and OFF for SW4.)

SW No.	SW contents Main	ON	OFF	Comment
1	Remote controller Main/Sub setting	Main	Sub	Set one of the two remote controllers at one group to "ON".
2	Temperature display units setting	Celsius	Fahrenheit	When the temperature is displayed in [Fahrenheit], set to "OFF".
3	Cooling/heating display in AUTO mode	Yes	No	When you do not want to display "Cooling" and "Heating" in the AUTO mode, set to "OFF".
4	Indoor temperature display	Yes	No	When you want to display the indoor temperature, set to "ON".

2-4-2. Rule of setting address

Unit	Address setting	Example	Note	
Indoor unit	01 ~ 50	 	Use the most recent address within the same group of indoor units. Make the indoor units address connected to the BC controller (Sub) larger than the indoor units address connected to the BC controller (Main). If applicable, set the sub BC controllers in an PURY system in the following order: (1) Indoor unit to be connected to the BC controller (Main) (2) Indoor unit to be connected to the BC controller (No.1 Sub) (3) Indoor unit to be connected to the BC controller (No.2 Sub) Set the address so that (1)<(2)<(3)	
Outdoor unit	51 ~ 99, 100 (Note1)	 	The smallest address of indoor unit in same refrigerant system + 50 Assign sequential address numbers to the outdoor units in one refrigerant circuit system. OC, OS1 and OS2 are automatically detected. (Note 2) * Please reset one of them to an address between 51 and 99 when two addresses overlap. * The address automatically becomes "100" if it is set as "01~ 50"	
BC controller (Main)	52 ~ 99, 100	 	The address of outdoor unit + 1 * Please reset one of them to an address between 51 and 99 when two addresses overlap. * The address automatically becomes "100" if it is set as "01~ 50"	
BC controller (Sub)	52 ~ 99, 100	 	Lowest address within the indoor units connected to the BC controller (Sub) plus 50.	
Local remote controller	ME Remote controller (Main)	101 ~ 150 1 Fixed	 	The smallest address of indoor unit in the group + 100 * The place of "100" is fixed to "1"
	ME Remote controller (Sub)	151 ~ 199, 200 1 Fixed	 	The address of main remote controller + 50 * The address automatically becomes "200" if it is set as "00"
System controller	ON/OFF remote controller	000, 201 ~ 250   	The smallest group No. to be managed + 200 * The smallest group No. to be managed is changeable.	
	AE-200E/AE-50E AG-150A AT-50B EB-50GU-J EW-50E	000, 201 ~ 250 0,2  0~5  0~9 		
	PAC-YG50ECA	000, 201 ~ 250 0,2  0~5  0~9 	* Settings are made on the initial screen of AG-150A.	
	BAC-HD150	000, 201 ~ 250 0,2  0~5  0~9 	* Settings are made with setting tool of BM ADAPTER.	
	LMAP04-E	201 ~ 250 2 Fixed  		

Note1: To set the address to "100", set it to "50"

Note2: Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected.

OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.

2-4-3. System examples

Factory setting

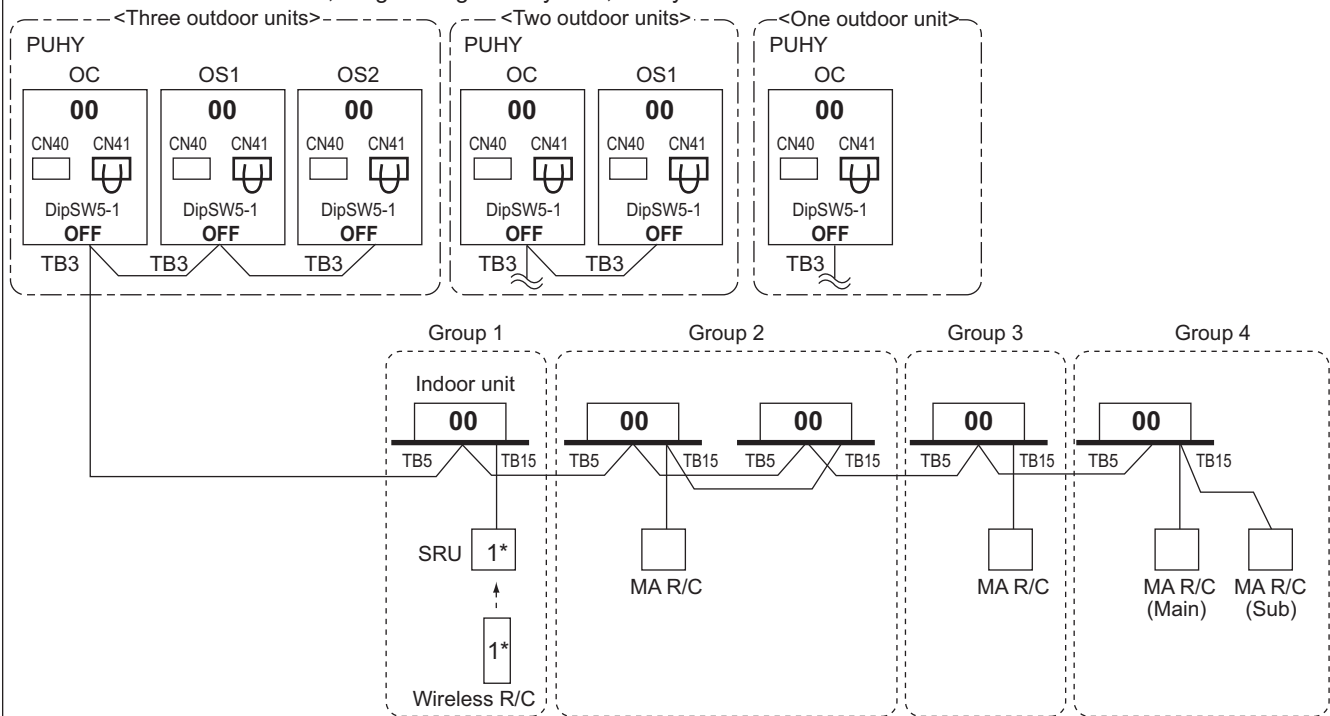

Original switch setting of the outdoors, indoors, controllers, LM-AP and BM ADAPTER at shipment is as follows.

- Outdoor unit : Address: 00, CN41: ON (Jumper), DipSW5-1: OFF
- Indoor unit : Address: 00
- ME remote controller : Address: 101
- LM-AP : Address: 247, CN41: ON (Jumper), DipSW1-2: OFF
- BM ADAPTER : Address: 000, CN41: ON (Jumper)
- AE-200E/AE-50E/EW-50E : Address: 000, CN21: ON (Jumper)

Setting at the site

- DipSW5-1(Outdoor) : When the System Controller is used, all the Dip SW5-1 at the outdoor units should be set to "ON". * Dip SW5-1 remains OFF when only LM-AP is used.
- DipSW1-2(LM-AP) : When the LM-AP is used together with System Controller, DipSW1-2 at the LM-AP should be set to "ON".
- CN40/CN41 : Change jumper from CN41 to CN 40 at outdoor control board will activate central transmission power supply to TB7;
(Change jumper at only one outdoor unit when activating the transmission power supply without using a power supply unit.)
Change jumper from CN41 to CN 40 at LM-AP/BM ADAPTER will activate transmission power supply to LM-AP/BM ADAPTER itself;
Power supply unit is recommended to use for a system having more than 1 outdoor unit, because the central transmission power supply from TB7 of one of outdoor units is risking that the outdoor unit failure may let down the whole system controller system.
- CN21(AE-200E/AE-50E/EW-50E) : Activates the power supply to M-NET transmission line from AE-200E/AE-50E/EW-50E (CN21: ON (power supplied), OFF (power not supplied))

2-4-3-1. MA remote controller, Single-refrigerant-system, No System Controller

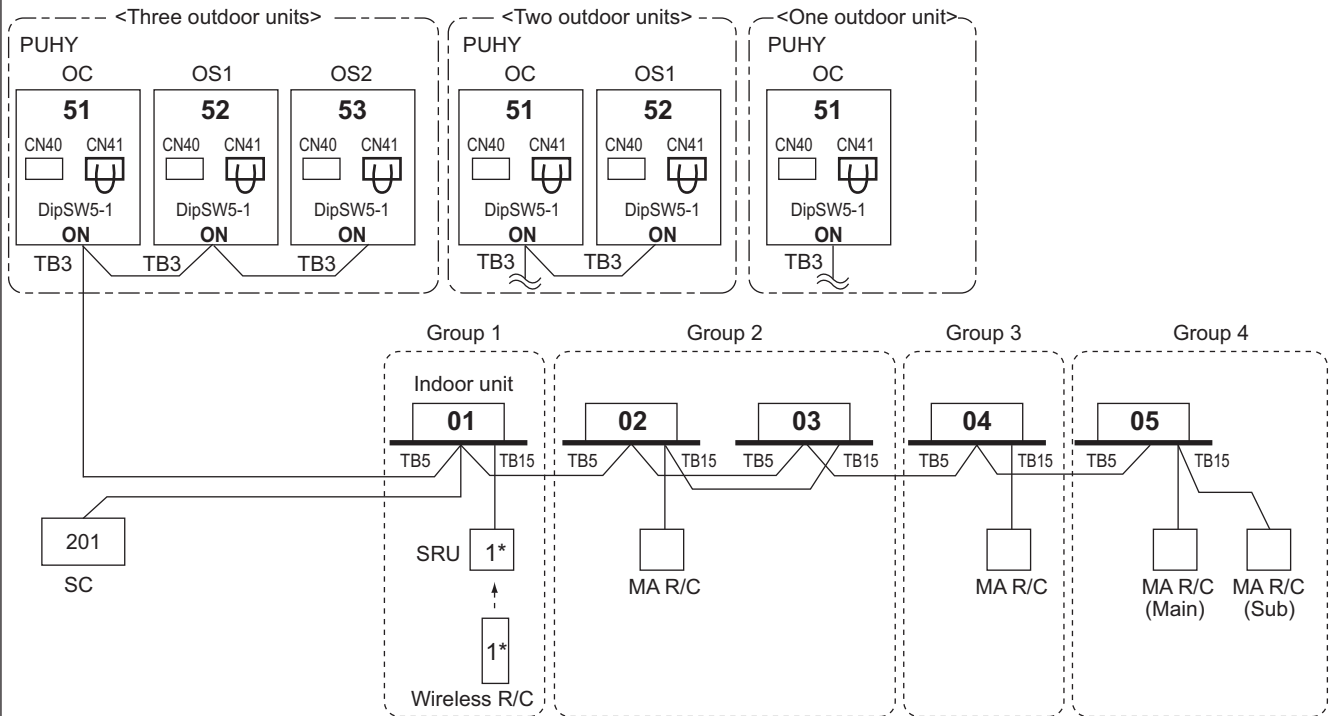

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

NOTE:

1. Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected. OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. No address setting is needed.
3. For a system having more than 32 indoor unit (P15-P140), confirm the need of Booster at 2-3 "System configuration restrictions".
4. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-2. MA remote controller, Single-refrigerant-system, System Controller

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

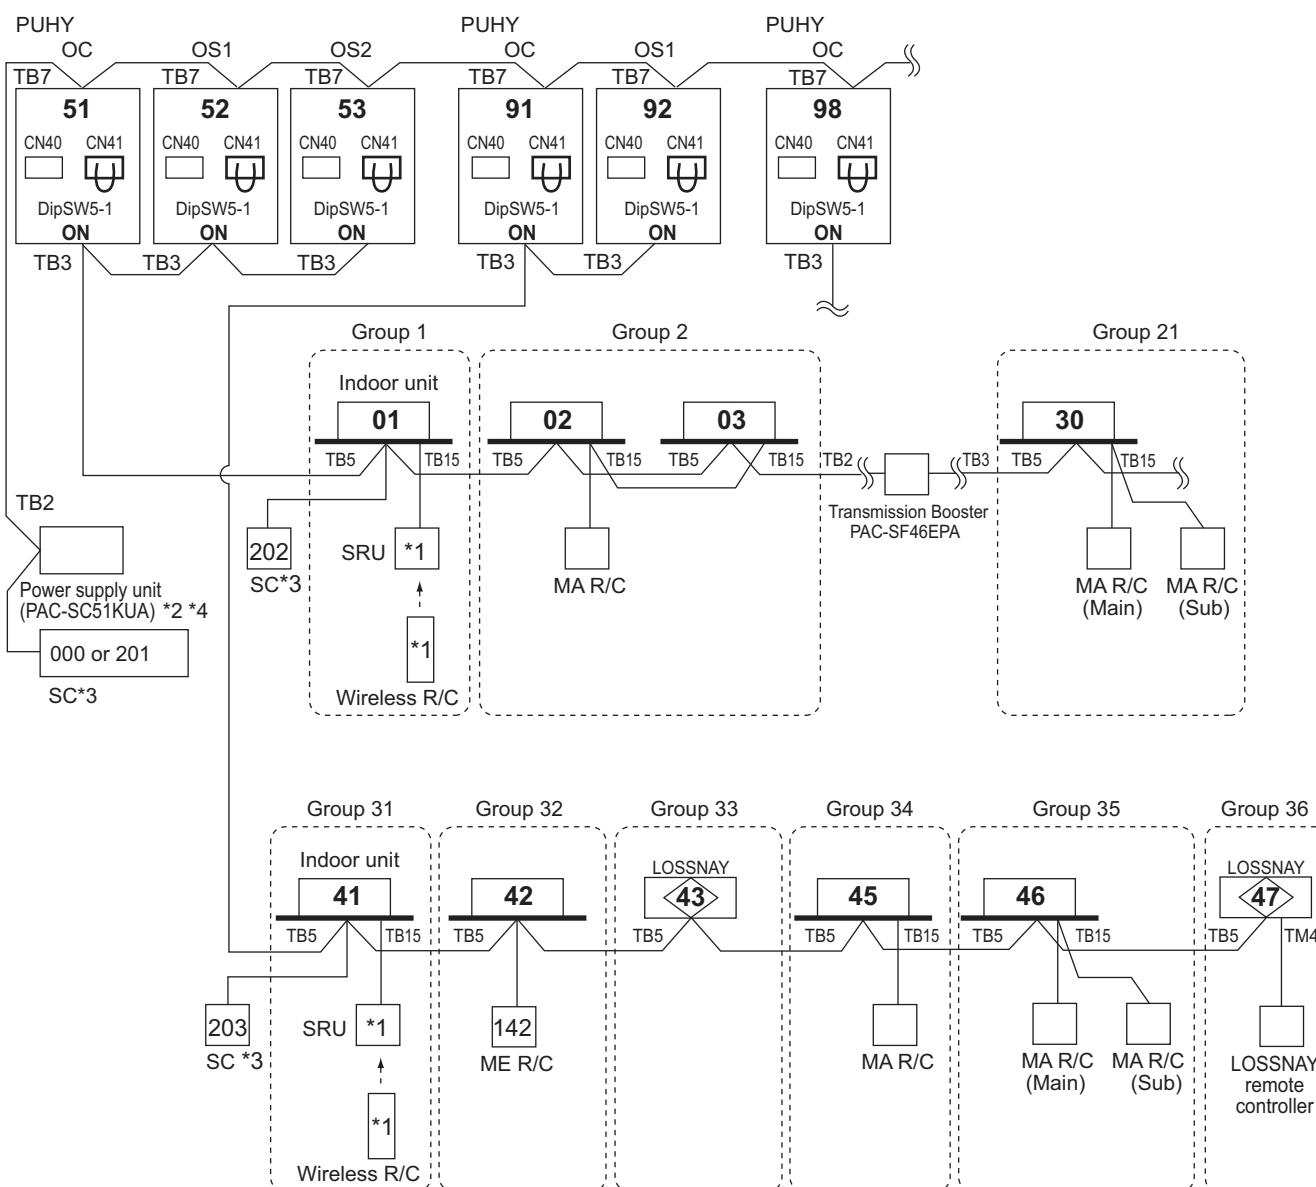

*SC can be connected to TB3 side or TB7 side;

Should SC connected to TB7 side, change Jumper from CN41 to CN40 at the Outdoor unit module so as to supply power to the SC.

NOTE:

1. Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected. OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units and centralized controller.
3. For a system having more than 32 indoor unit (P15-P140), confirm the need of Booster at 2-3 "System configuration restrictions".
4. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-3. MA remote controller, Multi-refrigerant-system, System Controller at TB7/TB3 side, Booster for long M-NET wiring

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 System controller should connect to TB7 at Outdoor and use power supply unit together in Multi-Refrigerant-System.

For AG-150A, 24V DC should be used with the PAC-SC51KUA.

For AE-200E, AE-50E, and EW-50E the power supply unit PAC-SC51KUA is unused.

*3 When multiple system controllers are connected in the system, set the controller with more functions than others as a "main" controller and others as "sub".

AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP are for exclusive use as a "main" system controller and cannot be used as a "sub" system controller.

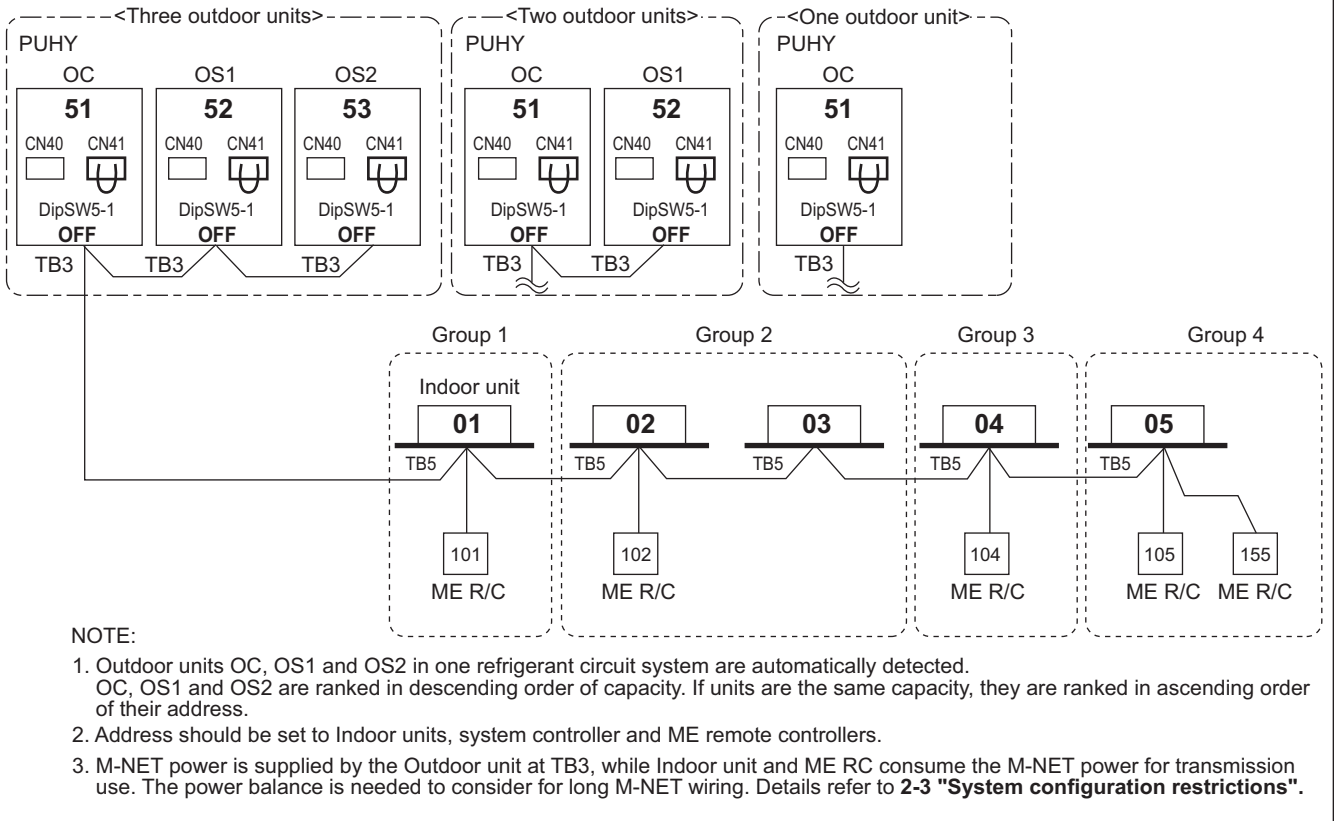

Make the setting to only one of the system controllers for "prohibition of operation from local remote controller".

*4 The power supply unit is not necessary for AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP.

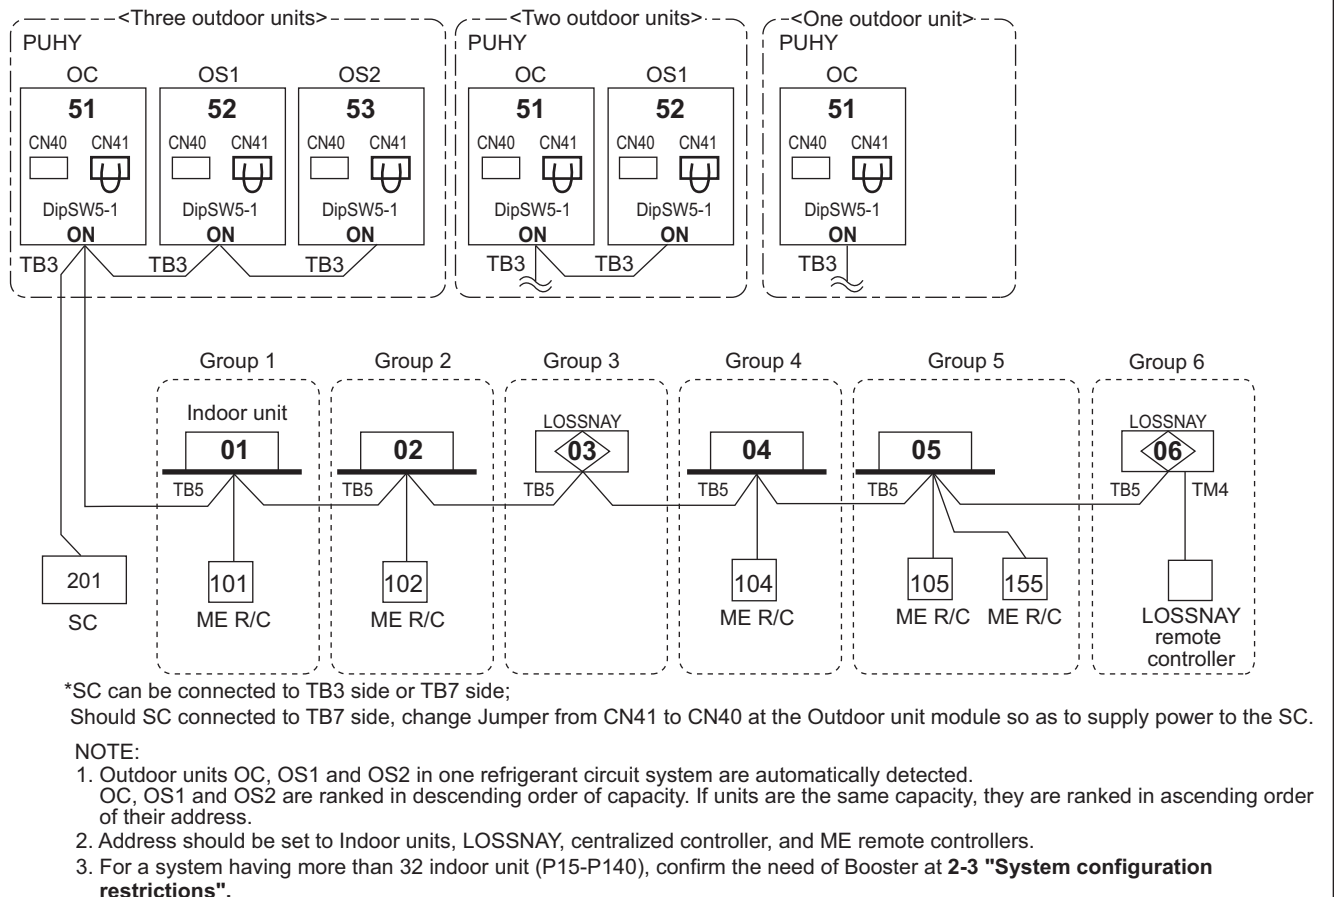

NOTE:

1. Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected.
OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units, LOSSNAY and system controller.
3. M-NET power is supplied by the Outdoor unit at TB3, while Indoor unit and ME remote controller consume the M-NET power for transmission use. The power balance is needed to consider for long M-NET wiring. Details refer to 2-3 "System configuration restrictions".
4. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

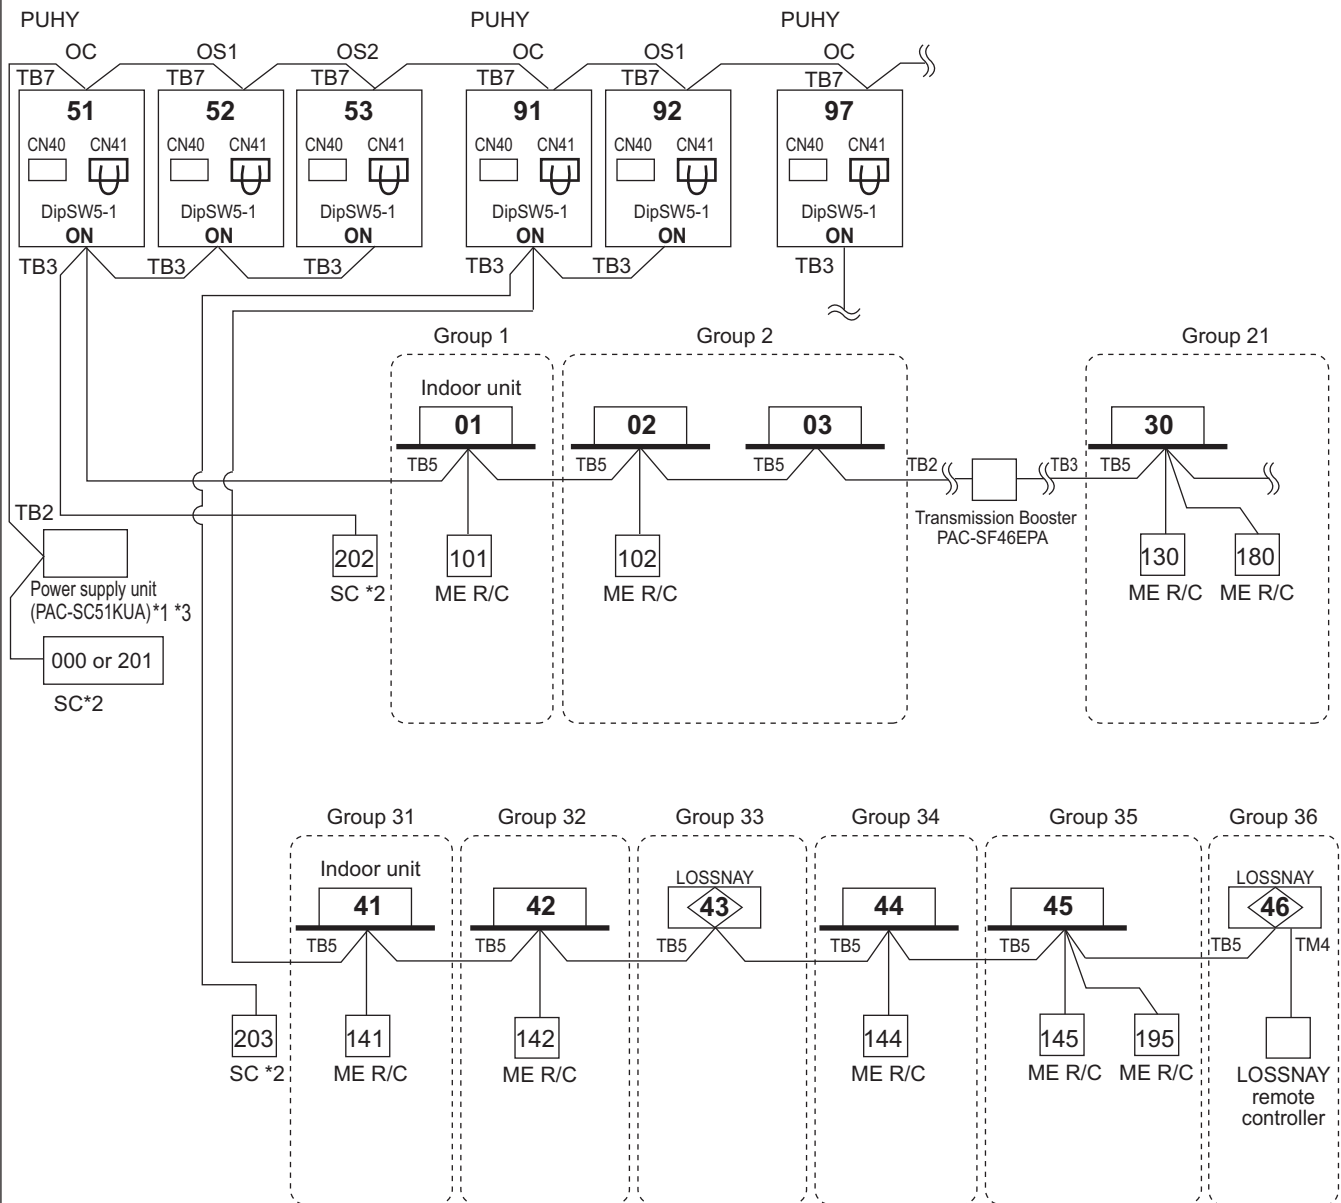

2-4-3-4. ME remote controller, Single-refrigerant-system, No system controller

2-4-3-5. ME remote controller, Single-refrigerant-system, System controller, LOSSNAY

2-4-3-6. ME remote controller, Multi-refrigerant-system, System Controller at TB 7side, LOSSNAY, Booster for long M-NET wiring

*1 System controller should connect to TB7 at Outdoor and use power supply unit together in Multi-Refrigerant-System.

For AG-150A, 24V DC should be used with the PAC-SC51KUA.

For AE-200E, AE-50E, and EW-50E the power supply unit PAC-SC51KUA is unused.

*2 When multiple system controllers are connected in the system, set the controller with more functions than others as a "main" controller and others as "sub".

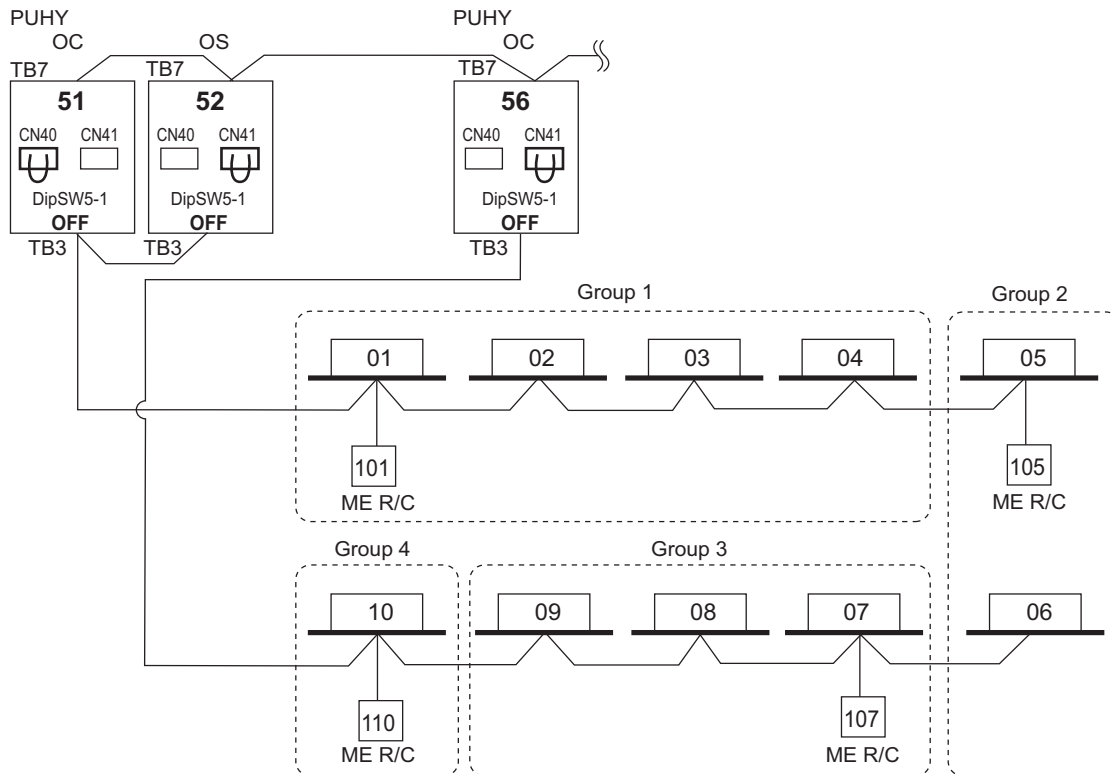

AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP are for exclusive use as a "main" system controller and cannot be used as a "sub" system controller.

*3 The power supply unit is not necessary for AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP.

NOTE:

- Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected. OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
- M-NET power is supplied by the Outdoor unit at TB3, while Indoor unit and ME remote controller consume the M-NET power for transmission use. The power balance is needed to consider for long M-NET wiring. Details refer to 2-3 "System configuration restrictions".

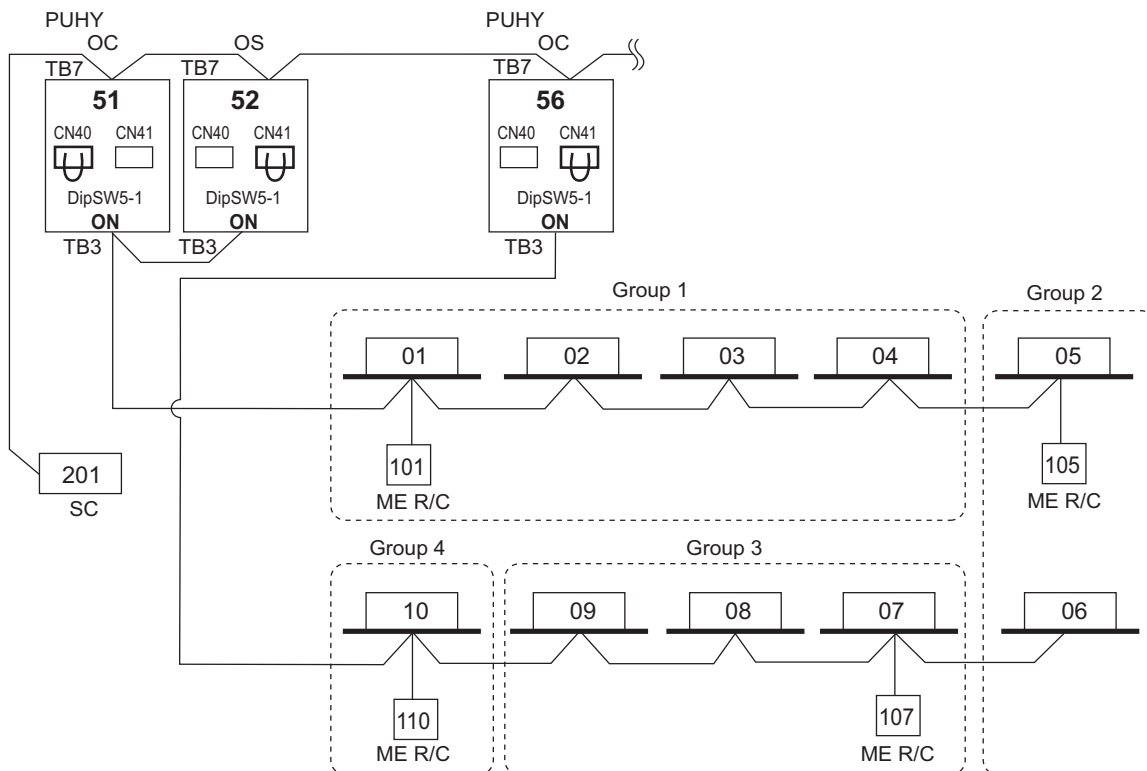

2-4-3-7. ME remote controller, Multi-refrigerant-system, No Power supply unit

NOTE

- It is necessary to change the connector to CN40 on the outdoor unit control board (only one outdoor unit) when the group is set between other refrigerant systems.
- It is necessary to set on the remote controller by manual when group sets on the different refrigerant system. Please refer to remote controller installation manual.

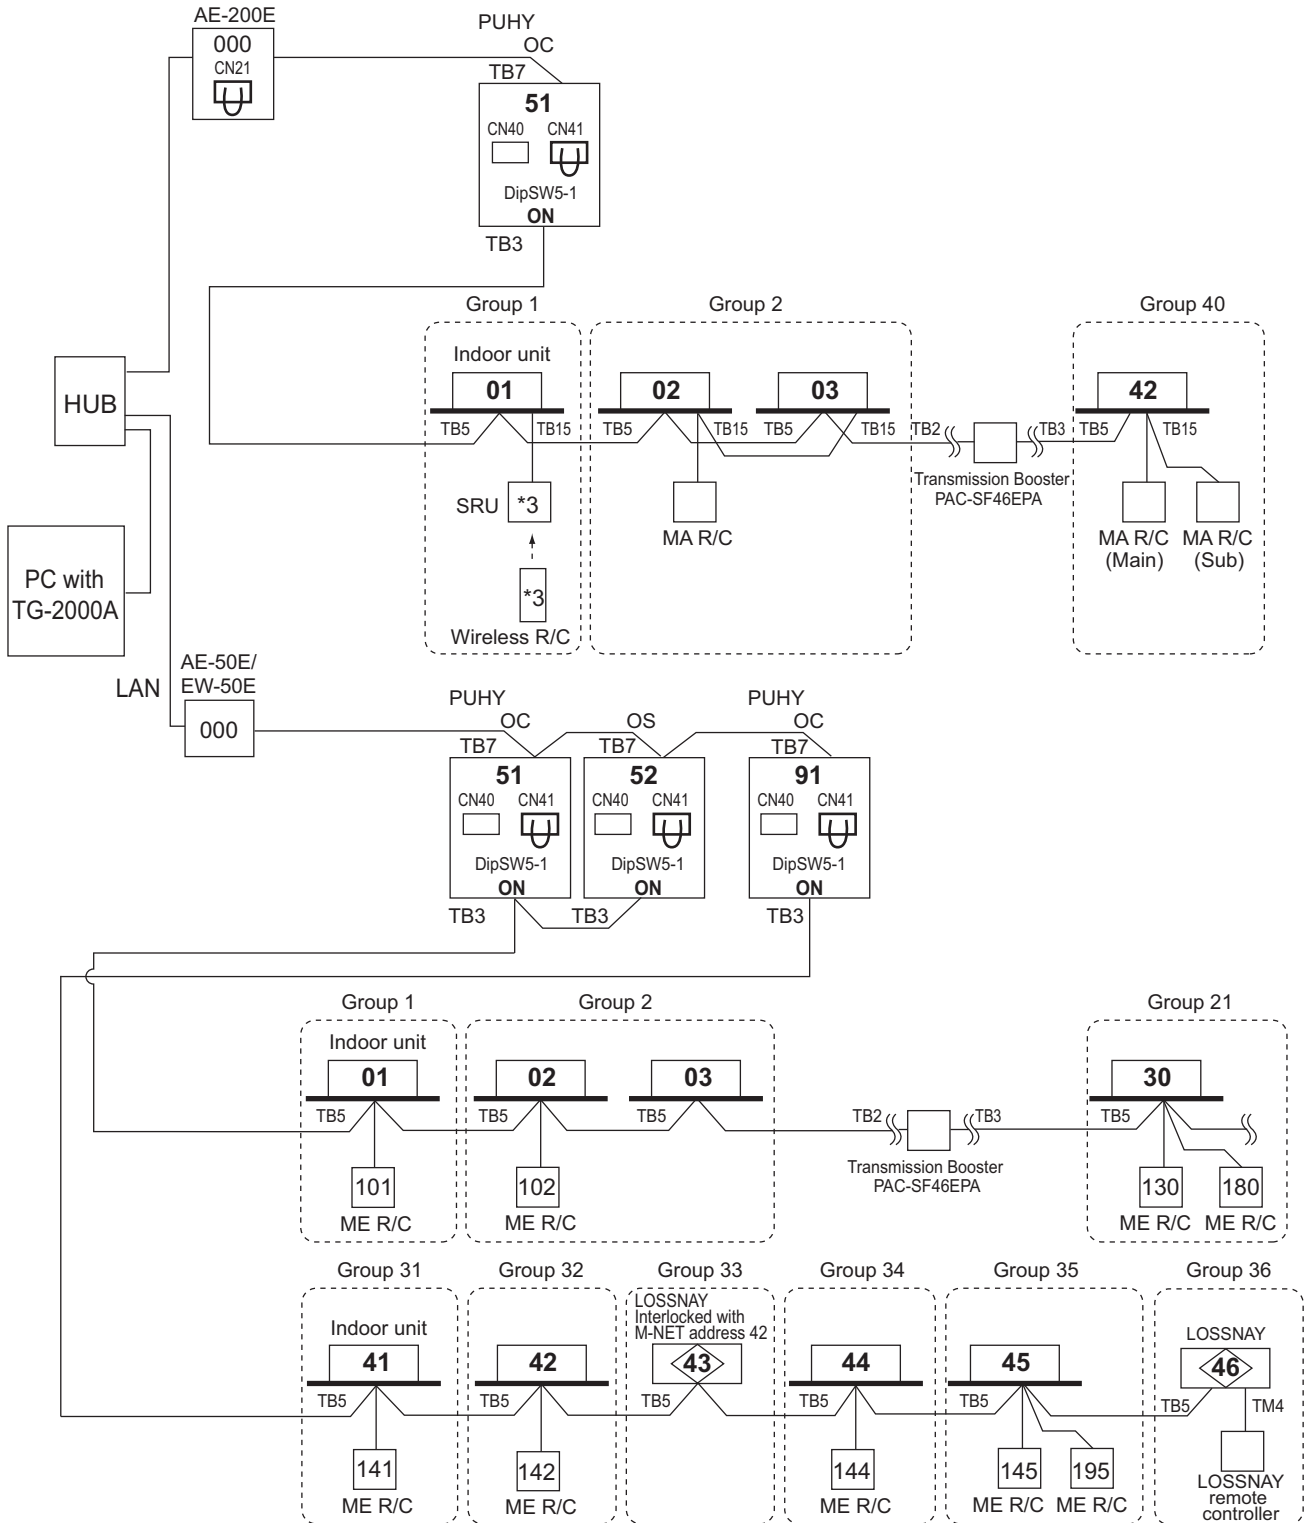

2-4-3-8. ME remote controller, Multi-refrigerant-system, System Controller at TB7 side, No Power supply unit

NOTE

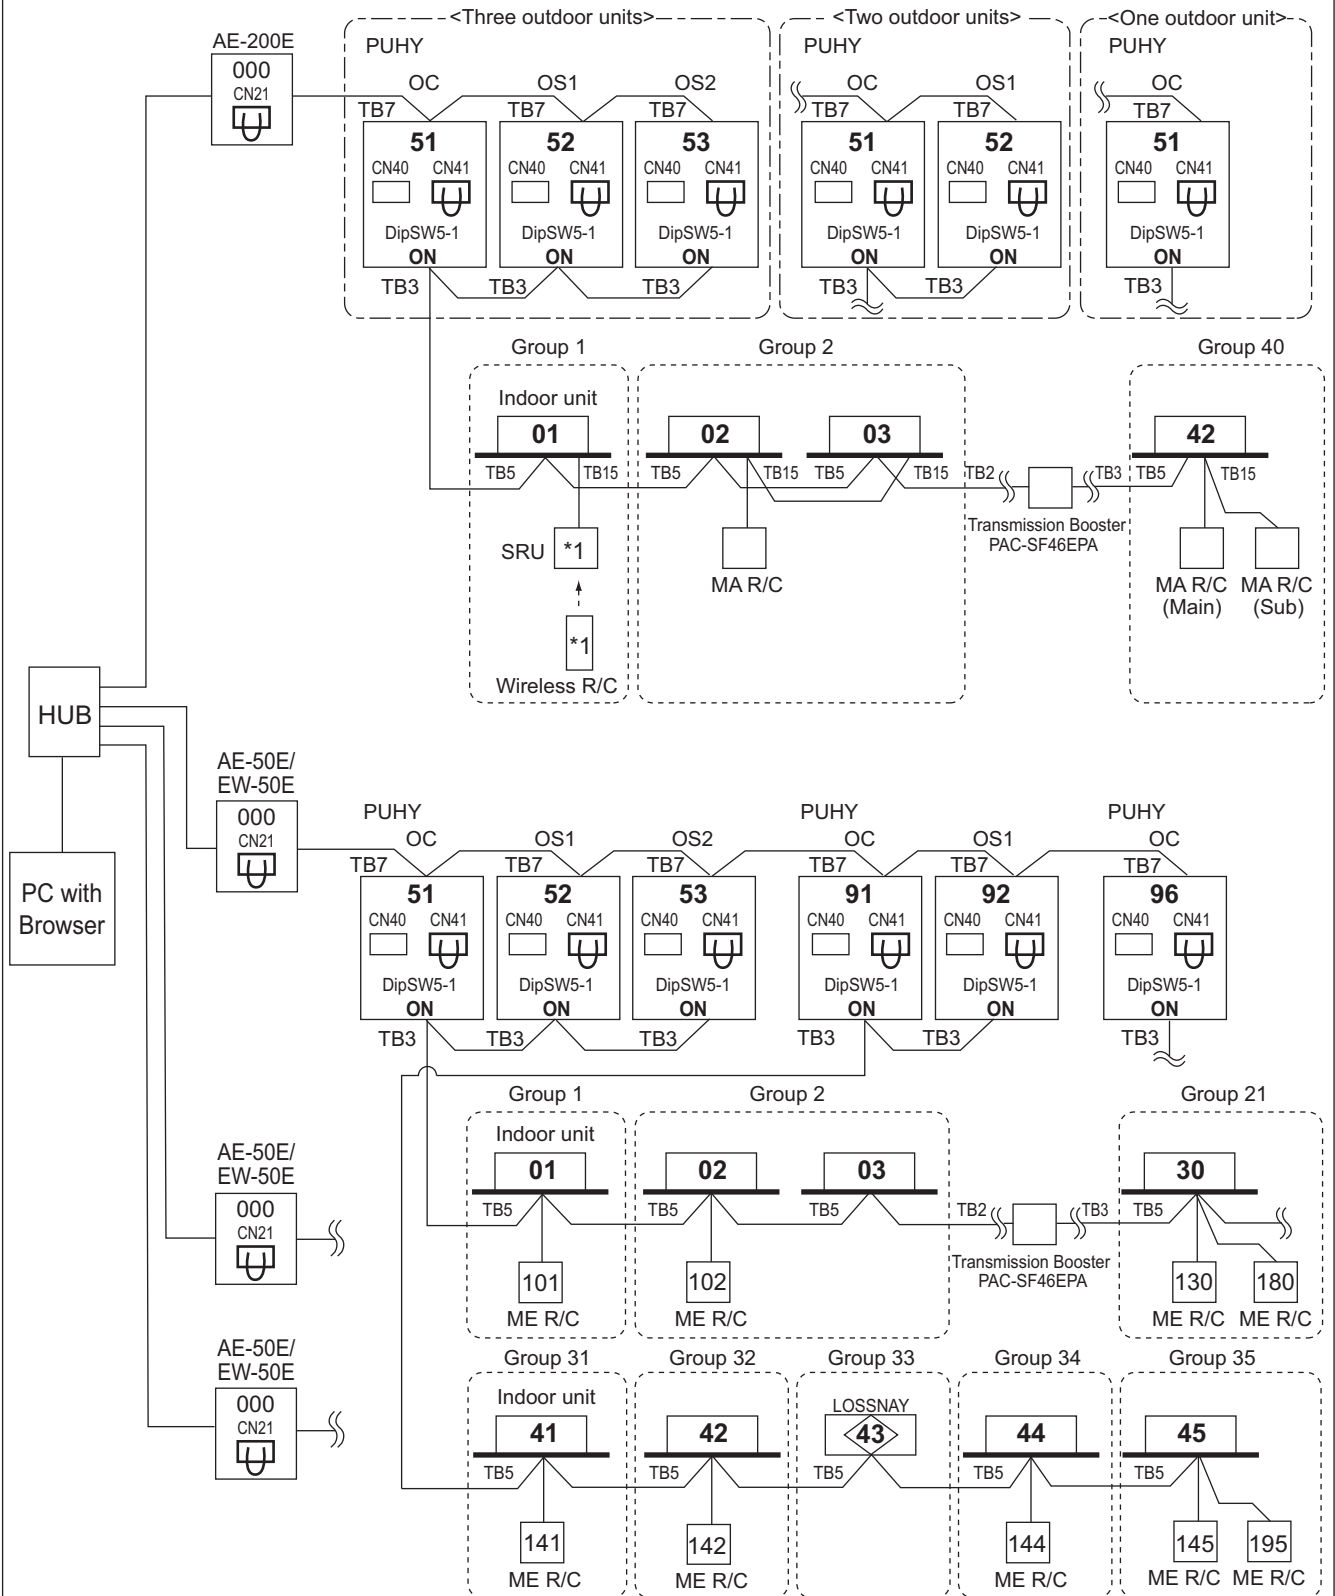

- It is necessary to change the connector to CN40 on the outdoor unit control board (only one outdoor unit) when the group is set between other refrigerant systems.
- It is necessary to set on the remote controller by manual when group sets on the different refrigerant system. Please refer to remote controller installation manual.

2-4-3-9. TG-2000A(*1)+AE-200E/AE-50E/EW-50E
 AE-200E can control max. 50 indoor units;
 TG-2000A can control max. 40 of AE-200E/AE-50E/EW-50E;*2
 TG-2000A can control max. 2000 indoor units.

*1 TG-2000A (Ver.6.5 or later) supports AE-200E/AE-50E (Ver.7.10 or later).
 TG-2000A (Ver.6.60 or later) supports EW-50E.
 *2 When AE-200E connected with AE-50E is connected, the number of AE-50E will be the maximum controllable number.
 TG-2000A can control up to 40 AE-200E/AE-50E or AE-200E without AE-50E connection.
 *3 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.
 *4 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-10. AE-200E + AE-50E/EW-50E
 AE-200E can control max. 200 indoor units/via AE-50E/EW-50E.

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

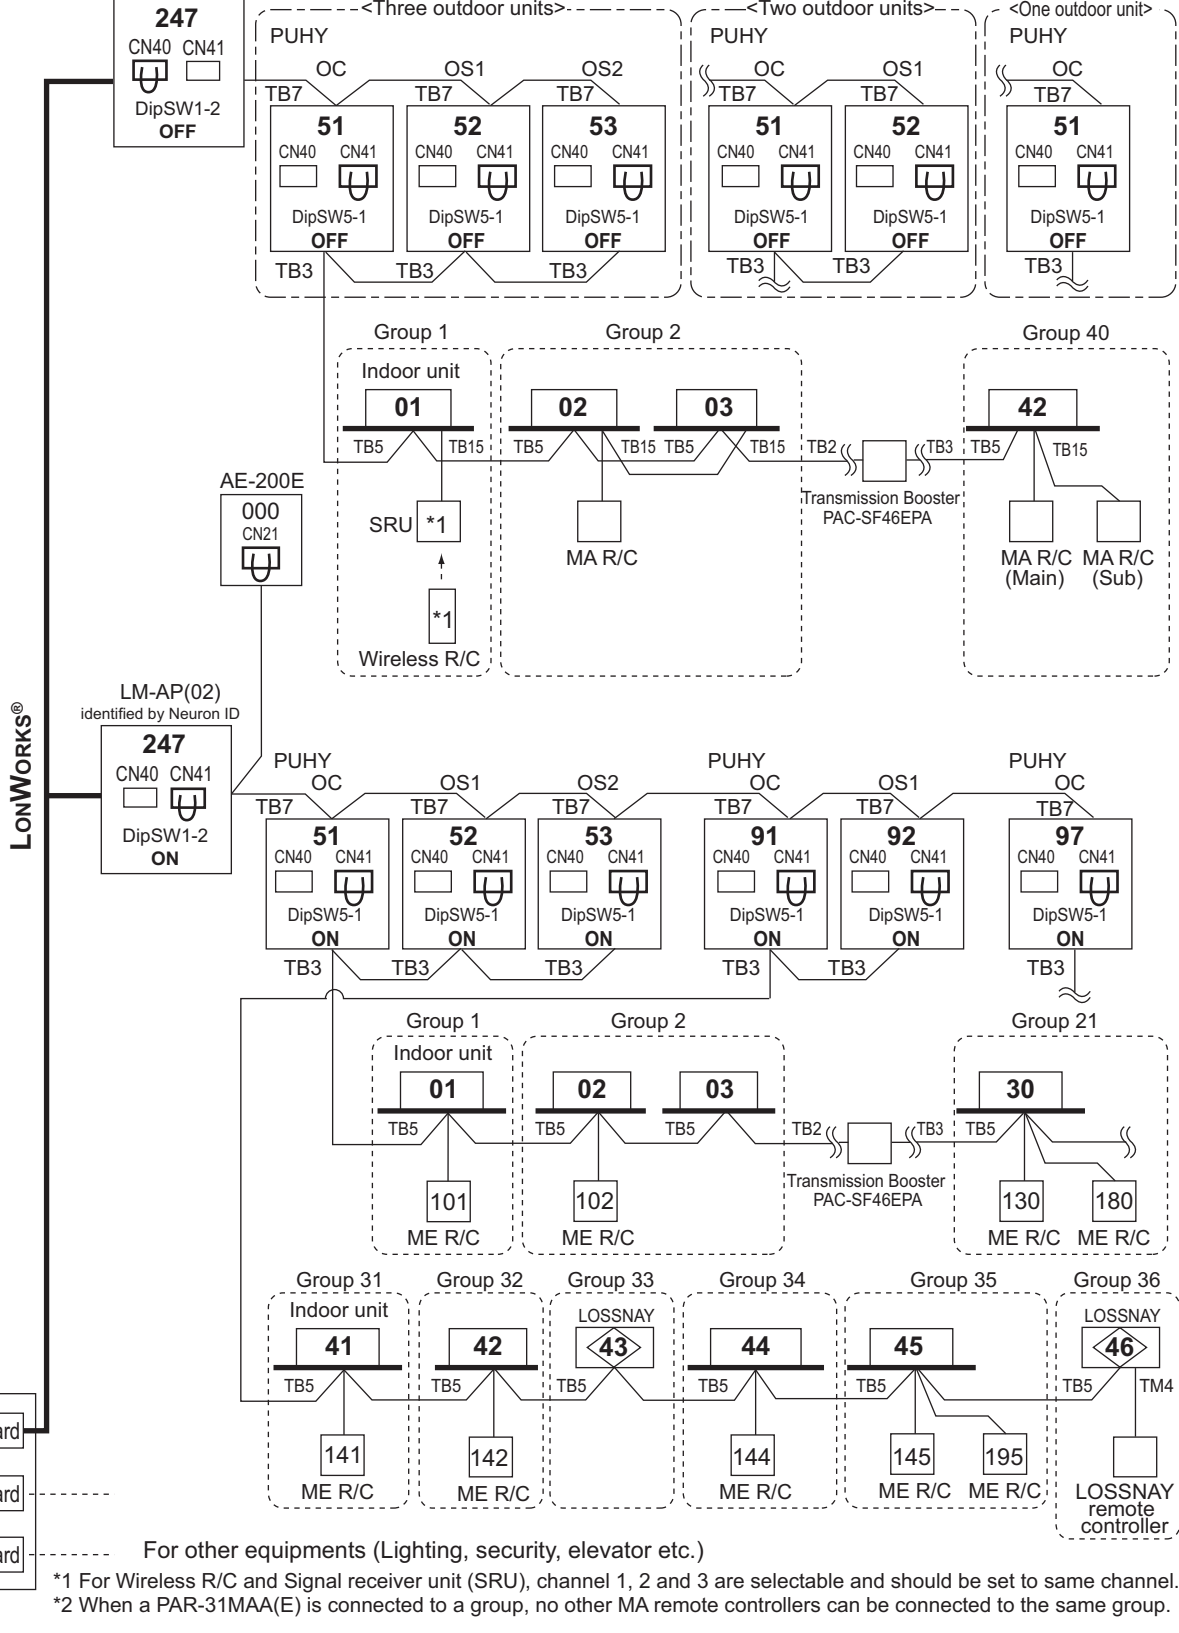

2-4-3-11. LM-AP

LM-AP can transmit for max. 50 indoor units;

If system controller (SC) is used, DipSW1-2 at LM-AP and DipSW5-1 at Outdoor unit should set to "ON".

Change Jumper from CN41 to CN40 to activate power supply to LM-AP itself for those LM-AP connected without system controller (SC).

LM-AP can transmit for max. 50 indoor units in single-refrigerant-system or multi-refrigerant-system.
 LM-AP(01) identified by Neuron ID

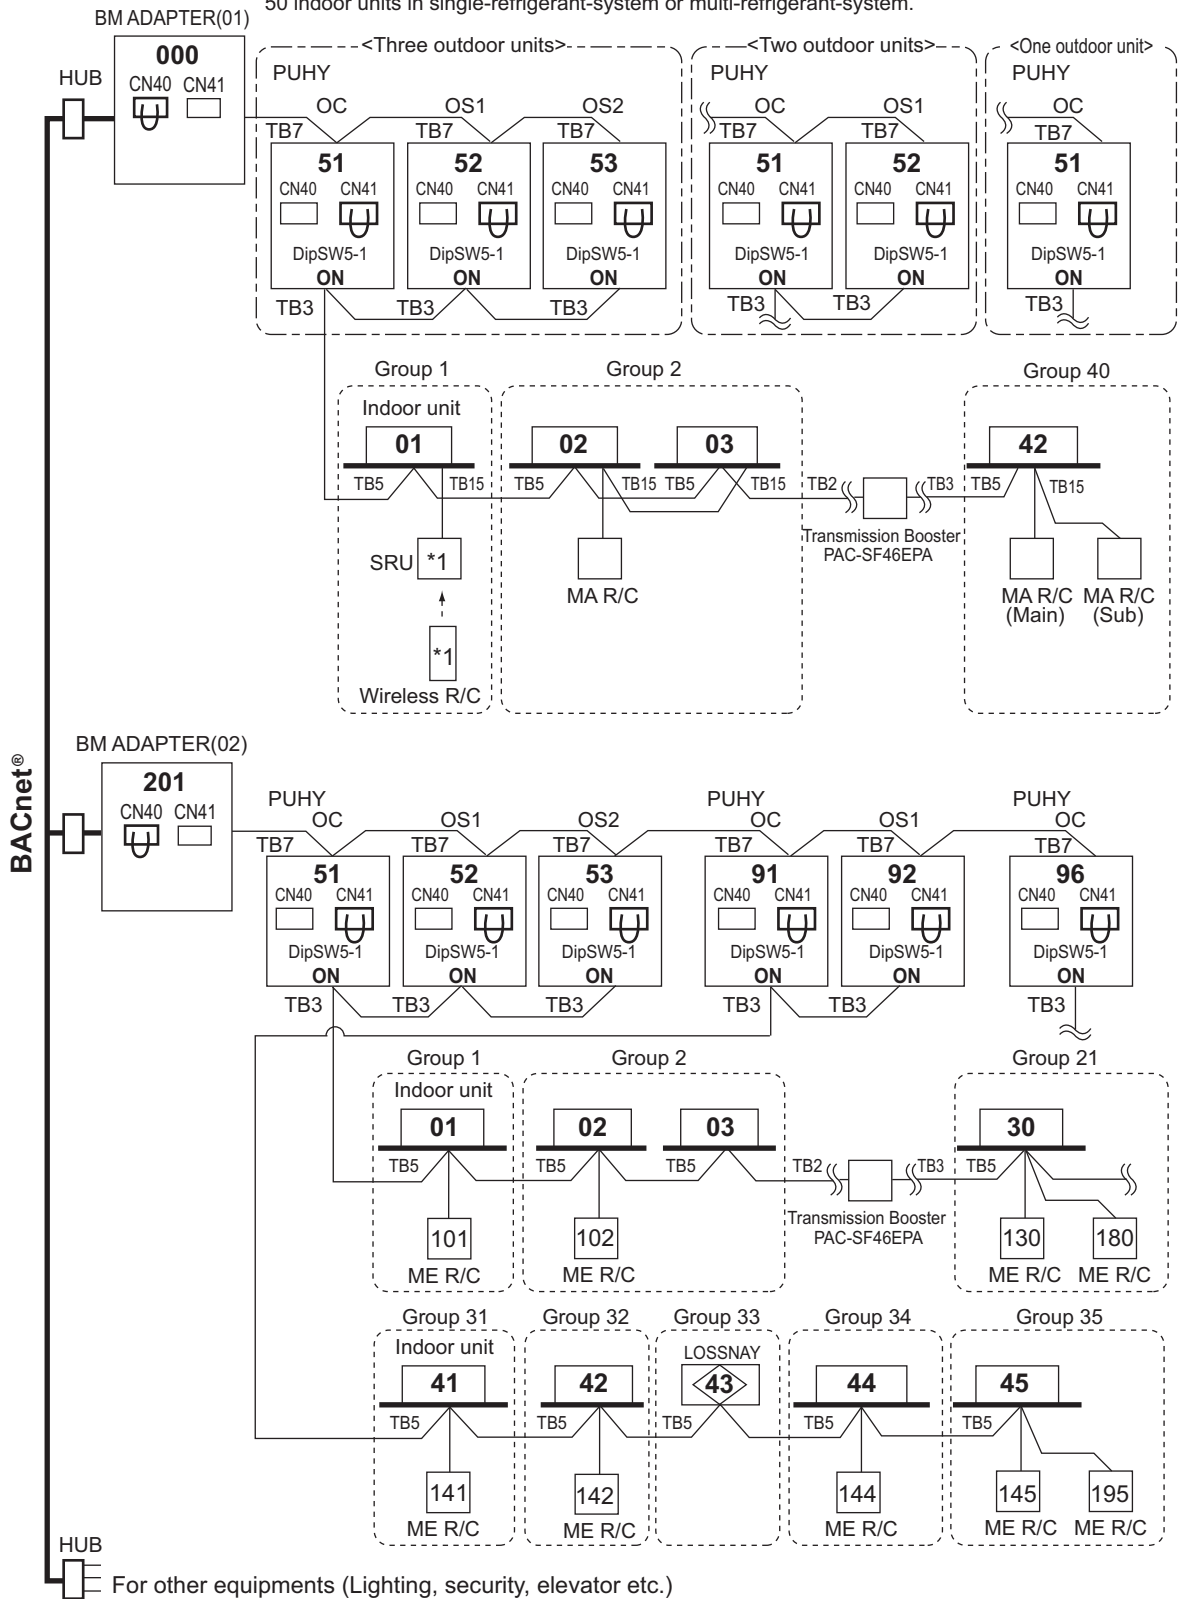

2-4-3-12. BM ADAPTER

BM ADAPTER can transmit for max. 50 indoor units;

Change Jumper from CN41 to CN40 to activate power supply to BM ADAPTER itself for those BM ADAPTER connected without the power supply unit.

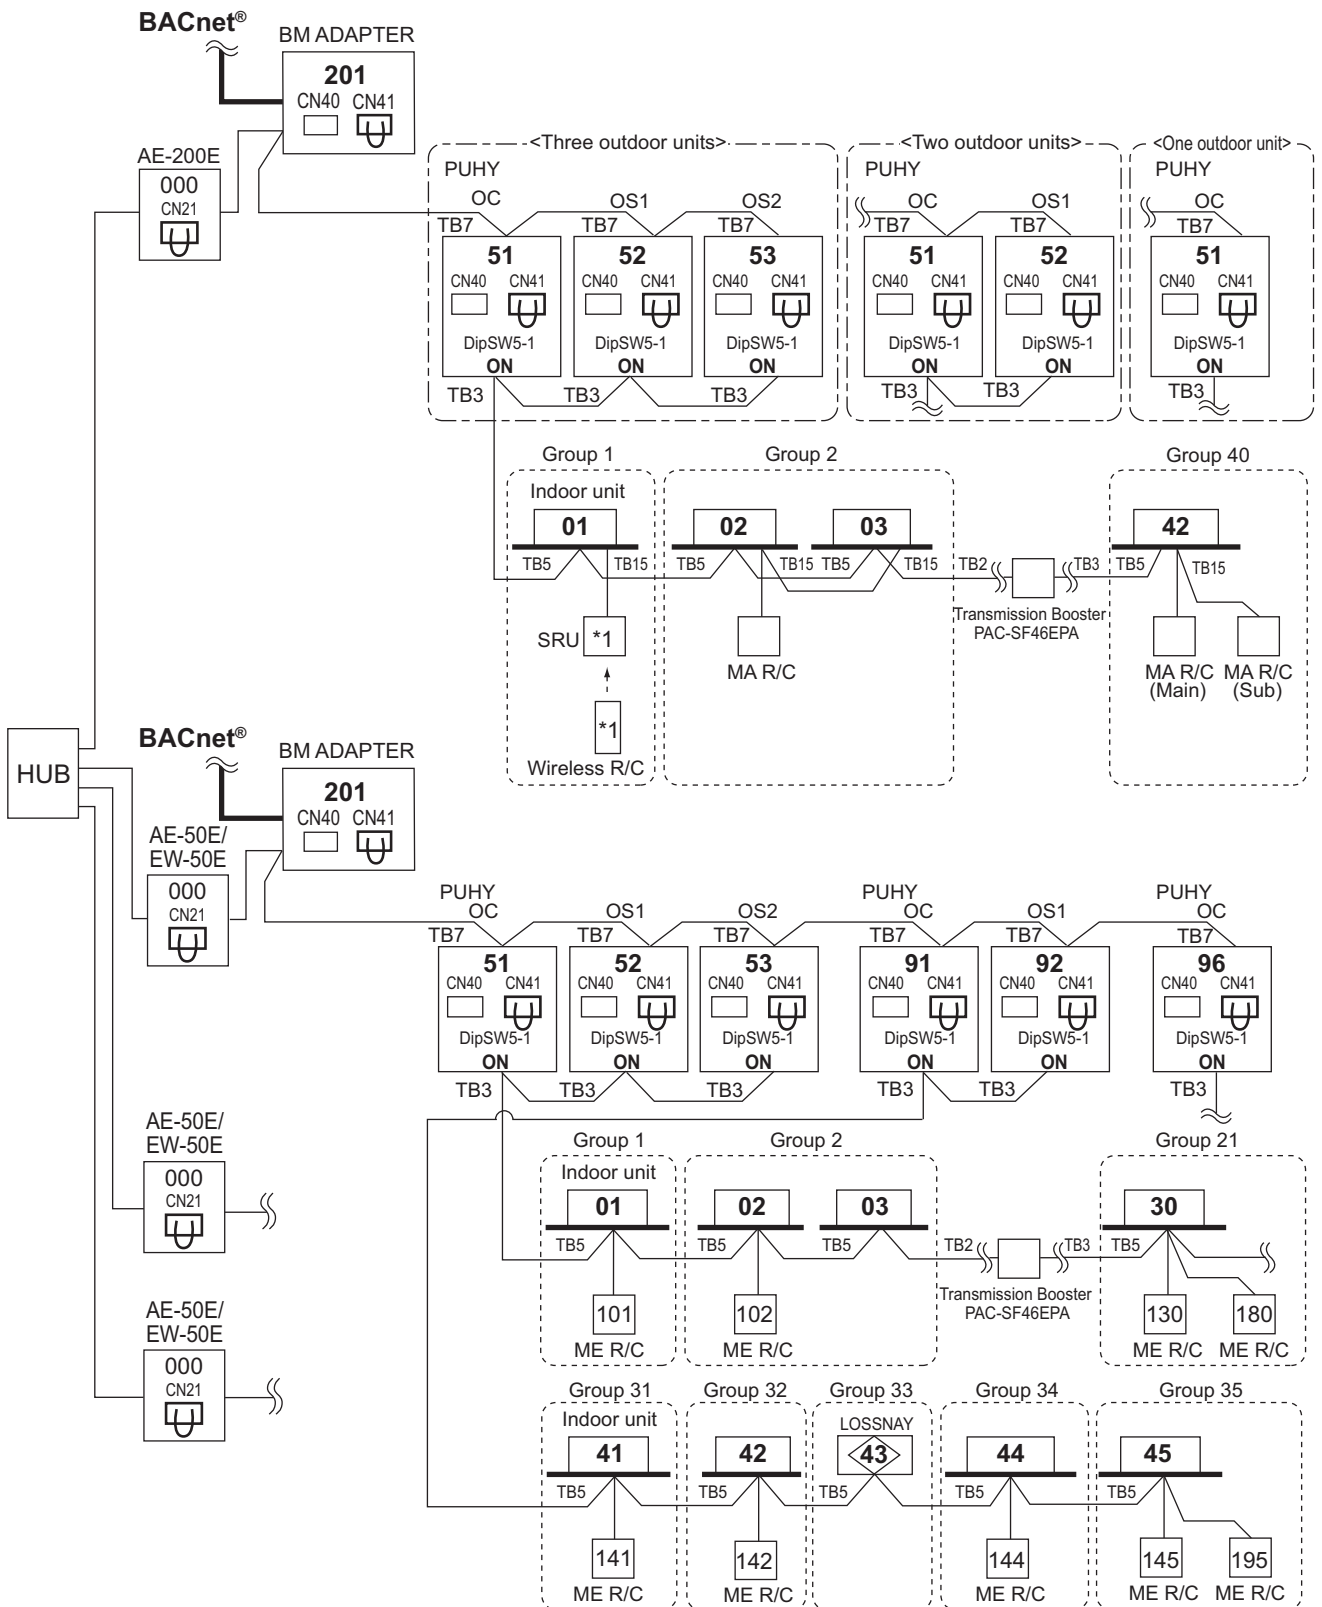

BM ADAPTER can transmit for max. 50 indoor units in single-refrigerant-system or multi-refrigerant-system.

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-13. BM ADAPTER+AE-200E/AE-50E/EW-50E

NOTE

• It is not necessary to connect the M-NET transmission line to the TB3 on BM ADAPTER. Leave the power jumper of BM ADAPTER connected to CN41.

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 Consult your dealer for restrictions when connecting both AE-200E/AE-50E/EW-50E and BM ADAPTER.

*3 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

*4 In a system that uses AE-200E and/or AE-50E/EW-50E, each BM-ADAPTER must be connected to the M-NET line.

3-1. R410A Piping material

Refrigerant pipe for CITY MULTI shall be made of phosphorus deoxidized copper, and has two types.

- A. Type-O : Soft copper pipe (annealed copper pipe), can be easily bent with human's hand.
- B. Type-1/2H pipe : Hard copper pipe (Straight pipe), being stronger than Type-O pipe of the same radical thickness.

The maximum operation pressure of R410A air conditioner is 4.30 MPa [623psi]. The refrigerant piping should ensure the safety under the maximum operation pressure. MITSUBISHI ELECTRIC recommends pipe size as Table 3-1, or You shall follow the local industrial standard. Pipes of radical thickness 0.7mm or less shall not be used.

Table 3-1. Copper pipe size and radial thickness for R410A CITY MULTI.

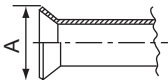

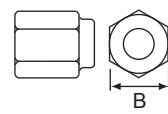

Size (mm)	Size (inch)	Radial thickness (mm)	Radial thickness (mil)	Pipe type
ø6.35	ø1/4"	0.8	[32]	Type-O
ø9.52	ø3/8"	0.8	[32]	Type-O
ø12.7	ø1/2"	0.8	[32]	Type-O
ø15.88	ø5/8"	1.0	[40]	Type-O
ø19.05	ø3/4"	1.2	[48]	Type-O
ø19.05	ø3/4"	1.0	[40]	Type-1/2H or H
ø22.2	ø7/8"	1.0	[40]	Type-1/2H or H
ø25.4	ø1"	1.0	[40]	Type-1/2H or H
ø28.58	ø1-1/8"	1.0	[40]	Type-1/2H or H
ø31.75	ø1-1/4"	1.1	[44]	Type-1/2H or H
ø34.93	ø1-3/8"	1.2	[48]	Type-1/2H or H
ø41.28	ø1-5/8"	1.4	[56]	Type-1/2H or H

* For pipe sized ø19.05 (3/4") for R410A air conditioner, choice of pipe type is up to you.

* The figures in the radial thickness column are based on the Japanese standards and provided only as a reference. Use pipes that meet the local standards.

Flare

Due to the relative higher operation pressure of R410A compared to R22, the flare connection should follow dimensions mentioned below so as to achieve enough the air-tightness.

Flare pipe	Pipe size	A (For R410A) (mm[in.])	Flare nut	Pipe size	B (For R410A) (mm[in.])
	ø6.35 [1/4"]	9.1		ø6.35 [1/4"]	17.0
	ø9.52 [3/8"]	13.2		ø9.52 [3/8"]	22.0
	ø12.70 [1/2"]	16.6		ø12.70 [1/2"]	26.0
	ø15.88 [5/8"]	19.7		ø15.88 [5/8"]	29.0
	ø19.05 [3/4"]	24.0		ø19.05 [3/4"]	36.0

3-2. Piping Design

3-2-1. PUHY-P200-500YKB-A1 Piping

Note1. No Joint after Header; Piping direct to Indoor Unit from Header;
 Note2. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;
 Piping length needs to consider the actual length and equivalent length which bents are counted.
 Equivalent piping length (m)=Actual piping length+“M” x Quantity of bent.

Fig. 3-2-1A Piping scheme

IU : Indoor unit , OU : Outdoor unit

Piping length		(m [ft.])		Bent equivalent length "M"	
Item	Piping in the figure	Max. length	Max. equivalent length	Outdoor unit model	M (m/bent [ft./bent])

OU: Outdoor Unit, IU: Indoor Unit

- *1 90m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
- *2 60m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
- *3 90m is available. When the piping length exceeds 40m, use one size larger liquid pipe starting with the section of piping where 40m is exceeded and all piping after that point.
 In the figure above, if the piping labeled "E" exceeds 40 meters (but does not exceed 90 meters), increase the size of the liquid piping labeled E, f, and g by one size.
- *4 30m is available. If the height difference between indoor units exceeds 15 meters (but does not exceed 30 meters), use one-size larger pipes for indoor unit liquid pipes.
 In the figure above, if "h1" exceeds 15 meters, increase the size of the liquid piping labeled C, D, E, d, e, f, and g by one size.

OU: Outdoor Unit, IU: Indoor Unit
 *1 90m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
 *2 60m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
 *3 90m is available. When the piping length exceeds 40m, use one size larger liquid pipe starting with the section of piping where 40m is exceeded and all piping after that point.
 In the figure above, if the piping labeled "E" exceeds 40 meters (but does not exceed 90 meters), increase the size of the liquid piping labeled E, f, and g by one size.
 *4 30m is available. If the height difference between indoor units exceeds 15 meters (but does not exceed 30 meters), use one-size larger pipes for indoor unit liquid pipes.
 In the figure above, if "h1" exceeds 15 meters, increase the size of the liquid piping labeled C, D, E, and g by one size.

Piping "A" size selection rule (mm [in.])

3-2-4. PUHY-EP200-500YLM-A1 Piping

Note1. No Joint after Header; Piping direct to Indoor Unit from Header;
 Note2. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;
 Piping length needs to consider the actual length and equivalent length which bents are counted.
 Equivalent piping length (m)=Actual piping length+“M” x Quantity of bent.

Fig. 3-2-4A Piping scheme

- *1 90m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
- *2 60m is available depending on the model and installation conditions. For more detailed information, contact your local distributor.
- *3 90m is available. When the piping length exceeds 40m, use one size larger liquid pipe starting with the section of piping where 40m is exceeded and all piping after that point. In the figure above, if the piping labeled "E" exceeds 40 meters (but does not exceed 90 meters), increase the size of the liquid piping labeled E, f, and g by one size.
- *4 30m is available. If the height difference between indoor units exceeds 15 meters (but does not exceed 30 meters), use one-size larger pipes for indoor unit liquid pipes. In the figure above, if "h1" exceeds 15 meters, increase the size of the liquid piping labeled C, D, E, and g by one size.

Piping "A" size selection rule		(mm [in.])	
Outdoor unit	Twinning kit	Pipe(Liquid)	Pipe(Gas)
PUHY-EP550-600YSLM-A1	CMY-Y100VBK3	ø15.88[5/8"]	ø28.58[1-1/8"]

For Piping size "S", "T", please refer to specification of the Twinning kit CMY-Y100VBK3 at the Outdoor unit's external drawing.

Selection criteria for joints	
Total down-stream Indoor capacity	Joint
~ P200	CMY-Y102SS-G2
P201 ~ P400	CMY-Y102LS-G2
P401 ~ P650	CMY-Y202S-G2
P651 ~	CMY-Y302S-G2

*Concerning detailed usage of Joint parts, refer to its Installation Manual.
 *The total capacity of the units in the downstream of the branch joint on at least one of the piping lines that are connected to the branch joint should be 650 or below.
 If the total capacity of the units in the downstream of the branch joints on both lines is 650 or above use two branch joints (CMY-Y302S-G2).

See the table below for the first joint of the outdoor unit described below.

Outdoor unit model	Joint model
EP550, EP600	CMY-Y202S-G2

Header selection rule	4-branch Header	8-branch Header	10-branch Header
	CMY-Y104-G	CMY-Y108-G	CMY-Y1010-G
Total down-stream Indoor capacity	<=P200	<=P400	<=P650

- * CMY-Y104-G can directly connect PUHY-EP200YLM-A1, but can NOT directly connect PUHY-EP250YLM-A1 or above;
- * CMY-Y108-G can directly connect PUHY-EP200-450YLM-A1, but can NOT directly connect PUHY-EP500YLM-A1 or above;
- * CMY-Y1010-G can directly connect PUHY-EP200-600Y(S)JLM-A1;
- * CMY-Y104-G can NOT connect P200, P250 Indoor, but CMY-Y108, Y1010-G can do;
- * Concerning detailed usage of Header parts, refer to its Installation Manual.

Note3. Indoor capacity is described as its model size;
 For example, PEFY-P32VMA-E, its capacity is P32;
 Note4. Total down-stream Indoor capacity is the summary of the model size of Indoors downstream.
 For example, PEFY-P25VMA-E+PEFY-P32VMA-E: Total Indoor capacity=P25+P32=P57
 Note5. Piping sized determined by the Total down-stream indoor capacity is NOT necessary to be bigger than the up-stream one.
 i.e. A>=B; A>=C>=D

3-3. Refrigerant charging calculation

PUHY-P-YKB-A1

At the time of shipping, the outdoor unit is charged with the refrigerant. As this charge does not include the amount needed for extended piping, additional charging for each refrigerant line will be required on site. In order that future servicing may be properly provided, always keep a record of the size and length of each refrigerant line and the amount of additional charge by writing it in the space provided on the outdoor unit.

(1) Calculation of additional refrigerant charge

- Calculate the amount of additional charge based on the length of the piping extension and the size of the refrigerant line.
- Use the table below as a guide to calculate the amount of additional charging and charge the system accordingly.
- If the calculation results in a fraction of less than 0.1kg, round up to the next 0.1kg. For example, if the result of the calculation was 12.33kg, round the result up to 12.4kg.
- * When connecting one or more PEFY-P20VMA3-E units, add 0.54 kg of refrigerant for each of these units.

<Additional Charge>

Units "m" and "kg"

<Formula>

- When the piping length from the outdoor unit to the farthest indoor unit is 30.5 m (100 ft) or shorter

$$\text{Amount of additional charge (kg)} = \begin{matrix} \text{ø19.05 total length} \\ \times 0.29 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø15.88 total length} \\ \times 0.2 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø12.7 total length} \\ \times 0.12 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø9.52 total length} \\ \times 0.06 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø6.35 total length} \\ \times 0.024 \text{ (kg/m)} \end{matrix}$$

Outdoor unit model	Amount (kg)	Total capacity of connected indoor units	Amount (kg)
P200	0	80 or below	2.0
P250	0	81 to 160	2.5
P300	0	161 to 330	3.0
P350	0	331 to 390	3.5
P400	0	391 to 480	4.5
P450	0	481 to 630	5.0
P500	0	631 to 710	6.0
		711 to 800	8.0
		801 to 890	9.0
		891 to 1070	10.0
		1071 to 1250	12.0
		1251 or above	14.0

- When the piping length from the outdoor unit to the farthest indoor unit is longer than 30.5 m (100 ft)

$$\text{Amount of additional charge (kg)} = \begin{matrix} \text{ø19.05 total length} \\ \times 0.26 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø15.88 total length} \\ \times 0.18 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø12.7 total length} \\ \times 0.11 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø9.52 total length} \\ \times 0.054 \text{ (kg/m)} \end{matrix} + \begin{matrix} \text{ø6.35 total length} \\ \times 0.021 \text{ (kg/m)} \end{matrix}$$

Outdoor unit model	Amount (kg)	Total capacity of connected indoor units	Amount (kg)
P200	0	80 or below	2.0
P250	0	81 to 160	2.5
P300	0	161 to 330	3.0
P350	0	331 to 390	3.5
P400	0	391 to 480	4.5
P450	0	481 to 630	5.0
P500	0	631 to 710	6.0
		711 to 800	8.0
		801 to 890	9.0
		891 to 1070	10.0
		1071 to 1250	12.0
		1251 or above	14.0

Example: PUHY-P350YKB-A1

Indoor	1: P125	A: ø12.7	40 m	a: ø9.52	10 m
	2: P100	B: ø9.52	10 m	b: ø9.52	5 m
	3: P40	C: ø9.52	15 m	c: ø6.35	10 m
	4: P32	D: ø9.52	10 m	d: ø9.52	10 m
	5: P63			e: ø12.7	10 m

The total length of liquid pipe of each size is as follows:
 ø12.7: A + e = 40 + 10 = 50 m
 ø9.52: B + C + D + a + b + d = 10 + 15 + 10 + 10 + 5 + 10 = 60 m
 ø6.35: c = 10 = 10 m

Additional refrigerant charge (kg)	=	Total length of liquid pipe sized ø19.05 x 0.26 (kg/m)	+	Total length of liquid pipe sized ø15.88 x 0.18 (kg/m)	+	Total length of liquid pipe sized ø12.7 x 0.11 (kg/m)	+	Total length of liquid pipe sized ø9.52 x 0.054 (kg/m)	+	Total length of liquid pipe sized ø6.35 x 0.021 (kg/m)	+ 0 + 3.5
		0 (m) x 0.26 (kg/m)		0 (m) x 0.18 (kg/m)		50 (m) x 0.11 (kg/m)		60 (m) x 0.054 (kg/m)		10 (m) x 0.021 (kg/m)	
	=	0	+	0	+	50 x 0.11	+	60 x 0.054	+	10 x 0.021	+ 0 + 3.5
											= 12.5 (12.45) kg

Amount of factory charged refrigerant

Outdoor unit model	Charged amount
P200	6.5kg
P250	8.0kg
P300	11.5kg
P350	
P400	
P450	11.8kg
P500	

Maximum refrigerant charge

There is a limit to the amount of refrigerant that can be charged into a unit. Regardless of the amount yielded by the formula above, observe the maximum refrigerant charge in the table below.

Total index of the outdoor units		P200 YKB-A1	P250 YKB-A1	P300 YKB-A1	P350 YKB-A1	P400 YKB-A1	P450 YKB-A1	P500 YKB-A1	P400 YSKB-A1	P450 YSKB-A1	P500 YSKB-A1	P550 YSKB-A1	P600 YSKB-A1	P650 YSKB-A1	P700 YSKB-A1

EP500	2.0	631 to 710	6.0
		711 to 800	8.0
		801 to 890	9.0
		891 to 1070	10.0
		1071 to 1250	12.0
		1251 or above	14.0

- When the piping length from the outdoor unit to the farthest indoor unit is longer than 30.5 m (100 ft)

$$\text{Amount of additional charge (kg)} = \left[\begin{matrix} \text{ø19.05 total length} \\ \times 0.26 \text{ (kg/m)} \end{matrix} \right] + \left[\begin{matrix} \text{ø15.88 total length} \\ \times 0.18 \text{ (kg/m)} \end{matrix} \right] + \left[\begin{matrix} \text{ø12.7 total length} \\ \times 0.11 \text{ (kg/m)} \end{matrix} \right] + \left[\begin{matrix} \text{ø9.52 total length} \\ \times 0.054 \text{ (kg/m)} \end{matrix} \right] + \left[\begin{matrix} \text{ø6.35 total length} \\ \times 0.021 \text{ (kg/m)} \end{matrix} \right]$$

Outdoor unit model	Amount (kg)	Total capacity of connected indoor units	Amount (kg)
EP200	0	80 or below	2.0
EP250	0	81 to 160	2.5
EP300	0	161 to 330	3.0
EP350	0	331 to 390	3.5
EP400	2.0	391 to 480	4.5
EP450	2.0	481 to 630	5.0
EP500	2.0	631 to 710	6.0
		711 to 800	8.0
		801 to 890	9.0
		891 to 1070	10.0
		1071 to 1250	12.0
		1251 or above	14.0

Example: PUHY-EP400YLM-A1

m [kg]					
Indoor	1: P125	A: ø12.7	40 m	a: ø9.52	10 m
	2: P100	B: ø9.52	10 m	b: ø9.52	5 m
	3: P40	C: ø9.52	15 m	c: ø6.35	10 m
	4: P32	D: ø9.52	10 m	d: ø9.52	10 m
	5: P63			e: ø12.7	10 m

The total length of liquid pipe of each size is as follows:

ø12.7: A + e = 40 + 10 = 50 m

ø9.52: B + C + D + a + b + d = 10 + 15 + 10 + 10 + 5 + 10 = 60 m

ø6.35: c = 10 = 10 m

Additional refrigerant charge (kg)	=	Total length of liquid pipe sized ø19.05 x 0.26 (kg/m)	+	Total length of liquid pipe sized ø15.88 x 0.18 (kg/m)	+	Total length of liquid pipe sized ø12.7 x 0.11 (kg/m)	+	Total length of liquid pipe sized ø9.52 x 0.054 (kg/m)	+	Total length of liquid pipe sized ø6.35 x 0.021 (kg/m)	+ 2.0 + 3.5
		0 (m) x 0.26 (kg/m)		0 (m) x 0.18 (kg/m)		50 (m) x 0.11 (kg/m)		60 (m) x 0.054 (kg/m)		10 (m) x 0.021 (kg/m)	
	=	0	+	0	+	50 x 0.11	+	60 x 0.054	+	10 x 0.021	+ 2.0 + 3.5
		= 14.5 (14.45) kg									

Amount of factory charged refrigerant

Outdoor unit model	Charged amount
EP200 EP250	7.5kg
EP300 EP350	10.3kg
EP400 EP450 EP500	11.8kg

Maximum refrigerant charge

There is a limit to the amount of refrigerant that can be charged into a unit. Regardless of the amount yielded by the formula above, observe the maximum refrigerant charge in the table below.

Total index of the outdoor units			EP200 YLM-A1	EP250 YLM-A1	EP300 YLM-A1	EP350 YLM-A1	EP400 YLM-A1	EP450 YLM-A1	EP500 YLM-A1	EP550 YSLM-A1	EP600 YSLM-A1	EP650 YSLM-A1	EP700 YSLM-A1	EP750 YSLM-A1	EP800 YSLM-A1	EP850 YSLM-A1

4-1. Requirement on installation site

1. No direct thermal radiation to the unit.
2. No possibility of annoying the neighbors by the sound of the unit.

Valves and refrigerant flow on the outdoor unit may generate noise.

3. Avoid the sites where strong winds blow.
4. With strength to bear the weight of the unit.
5. Drain flow from the unit is cared at heating mode.
6. Enough space for installation and service as shown at 4-2.
7. Avoid the sites where acidic solutions or chemical sprays (sulfur series) are used frequently.
8. The unit should be secure from combustible gas, oil, steam, chemical gas like acidic solution, sulfur gas and so on.

4-2. Spacing

In case of single installation

- Secure enough space around the unit as shown in the figure.
- If the wall height exceeds the height limit, widen the space labeled "L" and "W" by the amount that exceeds the limit (labeled h in the figure).

(1) Walls are lower than the height limit.

Condition	L	W
Minimum space behind the unit	≥ 100 [3-15/16]	≥ 50 [1-31/32]
Minimum space on both sides of the unit	≥ 300 [11-13/16]	≥ 15 [19/32]

(2) If the wall height (H) of the front, rear or side exceeds the wall height restriction

Condition	L	W
Minimum space behind the unit	≥ 100 [3-15/16] + h	≥ 50 [1-31/32] + h
Minimum space on both sides of the unit	≥ 300 [11-13/16] + h	≥ 15 [19/32] + h

(3) If there are obstacles at the upper part of the unit

(Unit : mm [in.])

In case of collective installation and continuous installation

- When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and passageways between groups of units as shown in the figures.
* Leave both sides of each group of units open.
- As with single installation, if the wall height exceeds the height limit, widen the space in the front and the back of a given group of units by the amount that exceeds the limit (labeled h in the figure).
- If there is a wall at both the front and the rear of the unit, install up to six units (three units: P450, 500, EP400, 450, 500) consecutively in the side direction and provide a space of 1000mm or more as inlet space/passage space for each six units (three units: P450, 500, EP400, 450, 500).

(1) Side-by-side installation

<The space on both sides of a given group of units is minimum.>

<The space on both sides of a given group of units is minimum.>

(2) Face-to-face installation

<There are walls in the front and the back of a given group of units.>

<There is a wall on one side.>

(3) Combination of face-to-face and side-by-side installations

<There are walls in the front and the back of a given group of units.>

<There is a wall on one side and either the front or the back of a given group of unit.>

(Unit : mm [in.])

4-3. Piping direction

4-3-1. Lifting method

- When lifting the unit with ropes, run the ropes under the unit and use the lifting hole.
- Support the unit at four points with two ropes, and avoid giving mechanical shock.
- Suspension rope angle must be 40° or less, so as to avoid compressing fan guard.
- Use two ropes, each at least 8m [26 ft.] in length
- Use ropes strong enough to support the weight of the unit.
- Always suspend the unit from four corners. (It is dangerous to suspend a unit from two corners and must not be attempted.)
- Use protective pads to keep the ropes from scratching the panels on the unit.
- Use a 50mm [1-31/32 in.] or thicker cardboard or cloth as a protective pad on the top of the unit to prevent contact between the fan guard and slings.

① P200, 250
EP200, 250

② P300, 350, 400
EP300, 350

③ P450, 500
EP400, 450, 500

⚠ CAUTION

Exercise caution when transporting products.

- Products weighing more than 20 kg [45 LBS] should not be carried alone.
- Do not carry the product by the PPbands.
- To avoid the risk of injury, do not touch the heat exchanger fins.
- Plastic bags may pose a risk of choking hazard to children. Tear plastic bags into pieces before disposing of them.
- When lifting and transporting outdoor units with ropes, run the ropes through lifting hole at the unit base. Securely fix the unit so that the ropes will not slide off, and always lift the unit at four points to prevent the unit from falling.

4-3-2. Installation

- Secure the unit with anchor bolts as shown in the figure below so that the unit will not topple over with strong wind or during an earthquake.
- Install the unit on a durable base made of such materials as concrete or angle steel.
- Take appropriate anti-vibration measures (e.g., vibration damper pad, vibration isolation base) to keep vibrations and noise from being transmitted from the unit through walls and floors.
- When using a rubber cushion, install it so that the cushion covers the entire width of the unit leg.
- Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure below is securely supported.
- Install the anchor bolt in such a way that the top end of the anchor bolt do not stick out more than 30 mm [1-3/16 in.].
- This unit is not designed to be anchored with post-installation-type anchor bolts, although by adding fixing brackets anchoring with such type of anchor bolts becomes possible.

- (A) : M10 anchor bolt procured at the site.
- (B) : Corner is not seated.
- (C) : Fixing bracket for hole-in anchor bolt (3 locations to fix with screws).
- (D) : Detachable leg

<Without detachable leg>

Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure is securely supported. The brackets may bend if they are not securely supported.

<With detachable leg>

Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure is securely supported. The brackets may bend if they are not securely supported.

! WARNING
 Properly install the unit on a surface that can withstand the weight of the unit. Unit installed on an unstable surface may fall and cause injury.

! WARNING
 Take appropriate safety measures against strong winds and earthquakes to prevent the unit from falling.

Take into consideration the durability of the base, water drainage route (Drain water is discharged from outdoor units during operation.), piping route, and wiring route when performing foundation work.

4-3-3. Anchor bolt positions

<P200-400, EP200-350>

- Individual installation

- Collective installation

(Unit : mm [in.])

Leave a minimum of 30 mm [1-3/16 in.] between units.

PUHY	P200, 250/EP200, 250
A	760±2 [29-15/16(29-27/32~30)]

PUHY	P300, 350, 400/EP300, 350
A	1060±2 [41-3/4(41-21/32~41-13/16)]

<P450-500, EP400-500>

Leave a minimum of 30 mm [1-3/16 in.] between units.

PUHY	P450, 500/EP400, 450, 500
A	795±2 [31-5/16(31-1/4~31-13/32)]

4-3-4. Installation

When the pipes and/or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.

When the pipes are routed at the bottom of the unit, the base should be at least 100 mm [3-15/16 in.] in height.

·P200, 250
EP200, 250

·P300, 350, 400
EP300, 350

·P450, 500
EP400, 450, 500

(Unit : mm [in.])

NO.	Usage	Specifications
(A)	For pipes	Bottom through hole 150 × 94 Knockout hole (5-29/32) (3-23/32)
(B)	For wires	Bottom through hole Ø65 Knockout hole (2-9/16)
(C)		Bottom through hole Ø52 Knockout hole (2-1/16)

Installation base parallel to the unit's front panel

Installation base perpendicular to the unit's front panel

4-3-5. Refrigerant pipe routing

Example of closure materials (field supply) Fill the gap at the site

The gaps around the edges of through holes for pipes and wires on the unit allow water or mice to enter the unit and damage its parts. Close these gaps with filler plates.

This unit allows two types of pipe routing:

- Bottom piping
- Front piping

CAUTION

To prevent small animals, water and snow from entering the unit and damage its parts, close the gap around the edges of through holes for pipes and wires with filler plates.

4-3-6. Twinning on the outdoor unit side

- The tilt angle of the twinning pipe
The tilt angle of the twinning pipe must be within $\pm 15^\circ$ with the horizontal plane.
Tilting the twinning pipe more than specified will cause damage to the unit.
- The length of the straight part of the pipe before the branching
For the twinning kit, always use the accessory piping parts.
The length of the straight part of pipe connected in front of the twinning pipe must be 500 mm [19-11/16 in.] or longer.
(Connect the field piping so that the length of the straight part of pipe connected in front of the twinning pipe can be 500 mm [19-11/16 in.] or longer.)
If the length is less than 500 mm [19-11/16 in.], it will cause damage to the unit.

Note: See the following drawing for the fitting position of the twinning pipe.

The tilt angle of the twinning pipe should be within $\pm 15^\circ$ with the horizontal plane.

• Precautions for outdoor unit combinations

<A> Install the piping so that oil will not accumulate in the stopped outdoor unit.

1.

The NG example shows that oil accumulates because the units are installed on a reverse gradient while unit 1 is in operation, and unit 3 is stopped.

2.

The NG example shows that oil accumulates into units 1 and 2 while unit 3 is in operation, and units 1 and 2 are stopped. Vertical pipe height (h) should be 0.2 m (7-7/8 in) or below.

3.

The NG example shows that oil accumulates into unit 1 while unit 3 is in operation, and unit 1 is stopped. Vertical pipe height (h) should be 0.2 m (7-7/8 in) or below.

4.

The NG example shows that oil accumulates into unit 3 while unit 1 is in operation, and unit 3 is stopped. Vertical pipe height (h) should be 0.2 m (7-7/8 in) or below.

 When the piping on the outdoor unit side (from the twinning pipe) exceeds 2 m [6 ft], ensure a trap (gas pipe only) within 2 m [6 ft].

Make sure the height of the trap is 200 mm [7-7/8 in] or more.

If there is no trap, oil can accumulate inside the pipe, causing a shortage of oil and may damage the compressor.

<2 m [6 ft.] or less>

<More than 2 m [6 ft.]>

Caution:

- Do not install traps other than the ones between outdoor units described on a separate sheet to prevent oil backflow and compressor start-up failure.
- Do not install solenoid valves to prevent oil backflow and compressor start-up failure.
- Do not install a sight glass because it may show improper refrigerant flow.
If a sight glass is installed, inexperienced technicians that use the glass may overcharge the refrigerant.

<PUHY-P550YSKB-A1>
<PUHY-EP550YSLM-A1>

<PUHY-P950YSKB-A1>
<PUHY-EP800YSLM-A1>

4-3-7. Twinning on the outdoor unit side

See the following drawing for connecting the pipes between the outdoor units.

<In case of 2units combination>

<In case of 3units combination>

CAUTION

The length of the straight pipe must be 500mm[19-11/16 in.] or longer. If not, it may cause improper operation.

4-4. Weather countermeasure

In cold and/or snowy areas, sufficient countermeasures to wind and snow damages should be taken for operating unit in normal and good condition in winter time. Surround the units with snow nets or fences to protect them from snow. Even in the other areas, full consideration is required for installation of unit in order to prevent abnormal operations caused by wind or snow. **When rain and snow directly fall on unit in the case of air-conditioning operations in 10 or less degrees centigrade outdoor air (50 or less degrees fahrenheit outdoor air), mount inlet and outlet ducts on unit for assuring stable operations.**

Countermeasure to snow and wind

Prevention the Outdoor unit from wind and snow damages in cold or snowy areas, snow hood shown below is recommended and helpful.

*Do not use a snow hood made of stainless steel, which may cause the unit to rust. If the use of a stainless snow hood is the only option, contact the sales office before installing it.

- Snow hood

Note:

1. Height of frame base for snow damage prevention (H) shall be twice as high as expected snowfall. Width of frame base shall not exceed that of the unit. The frame base shall be made of angle steel, etc., and designed so that snow and wind slip through the structure. (If frame base is too wide, snow will be accumulated on it.)
2. Install unit so that wind will not directly lash against openings of inlet and outlet ducts.
3. Build frame base at customer referring to this figure.
 Material : Galvanized steel plate 1.2T [1/16 in. T]
 Painting : Overall painting with polyester powder
 Color : Munsell 5Y8/1 (same as that of unit)
4. To install units side by side, install a filler plate between the fan guard and the outlet-side snow food as shown in Figure A.
 (The filler plate provided accommodates the installation pitch of between 30-80 mm [1-3/16~3-5/32 in.])
5. When the unit is used in a cold region and the heating operation is continuously performed for a long time when the outside air temperature is below freezing, install a heater to the unit base or take other appropriate measures to prevent water from freezing on the base.

Figure A Filler plate

Countermeasure to wind

Referring to the figure shown below, take appropriate measures which will suit the actual situation of the place for installation. A unit installed alone is vulnerable to strong winds. Select the installation site carefully to minimize the effect of winds. To install a unit in a place where the wind always blows from the same direction, install the unit so that the outlet faces away from the direction of the wind.

Install the outdoor unit where seasonal winds do not blow directly against the unit, such as behind a building.

Install the outdoor unit to avoid having seasonal winds against the front of air outlet/inlet on the unit.

4-5. Caution on selecting outdoor units

Consult your dealer when the following issues on Y system are the key concern.

- **Warm air** may flow out from the indoor unit during heating Thermo-OFF.
- **Refrigerant flow sound** may occur in the rooms with low background noise such as hotel rooms, hospital rooms, bedrooms, or conference rooms.

To avoid the above issues on Y system, changing board settings on the indoor and outdoor units is required.

Ask AC&R Works for details.

5-1. General precautions

5-1-1. Usage

- The air-conditioning system described in this Data Book is designed for human comfort.
- This product is not designed for preservation of food, animals, plants, precision equipment, or art objects. To prevent quality loss, do not use the product for purposes other than what it is designed for.
- To reduce the risk of water leakage and electric shock, do not use the product for air-conditioning vehicles or vessels.

5-1-2. Installation environment

- Do not install any unit other than the dedicated unit in a place where the voltage changes a lot, large amounts of mineral oil (e.g., cutting oil) are present, cooking oil may splash, or a large quantity of steam can be generated such as a kitchen.
- Do not install the unit in acidic or alkaline environment.
- Installation should not be performed in the locations exposed to chlorine or other corrosive gases. Avoid near a sewer.
- To reduce the risk of fire, do not install the unit in a place where flammable gas may be leaked or inflammable material is present.
- This air conditioning unit has a built-in microcomputer. Take the noise effects into consideration when deciding the installation position. Especially in a place where antenna or electronic device are installed, it is recommended that the air conditioning unit be installed away from them.
- Install the unit on a solid foundation according to the local safety measures against typhoons, wind gusts, and earthquakes to prevent the unit from being damaged, toppling over, and falling.

5-1-3. Backup system

- In a place where air conditioner's malfunctions may exert crucial influence, it is recommended to have two or more systems of single outdoor units with multiple indoor units.

5-1-4. Unit characteristics

- Heat pump efficiency depends on outdoor temperature. In the heating mode, performance drops as the outside air temperature drops. In cold climates, performance can be poor. Warm air would continue to be trapped near the ceiling and the floor level would continue to stay cold. In this case, heat pumps require a supplemental heating system or air circulator. Before purchasing them, consult your local distributor for selecting the unit and system.
- When the outdoor temperature is low and the humidity is high, the heat exchanger on the outdoor unit side tends to collect frost, which reduces its heating performance. To remove the frost, Auto-defrost function will be activated and the heating mode will temporarily stop for 3-10 minutes. Heating mode will automatically resume upon completion of defrost process.
- Air conditioner with a heat pump requires time to warm up the whole room after the heating operation begins, because the system circulates warm air in order to warm up the whole room.
- The sound levels were obtained in an anechoic room. The sound levels during actual operation are usually higher than the simulated values due to ambient noise and echoes. Refer to the section on "SOUND LEVELS" for the measurement location.
- Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes even when operating normally. Please consider to avoid location where quietness is required. For BC controller, it is recommended to unit to be installed in places such as ceilings of corridor, restrooms and plant rooms.
- The total capacity of the connected indoor units can be greater than the capacity of the outdoor unit. However, when the connected indoor units operate simultaneously, each unit's capacity may become smaller than the rated capacity.
- When the unit is started up for the first time within 12 hours after power on or after power failure, it performs initial startup operation (capacity control operation) to prevent damage to the compressor. The initial startup operation requires 90 minutes maximum to complete, depending on the operation load.

5-1-5. Relevant equipment

- Use an earth leakage breaker (ELB) with medium sensitivity, and an activation speed of 0.1 second or less.
- Consult your local distributor or a qualified technician when installing an earth leakage breaker.
- If the unit is inverter type, select an earth leakage breaker for handling high harmonic waves and surges.
- Leakage current is generated not only through the air conditioning unit but also through the power wires. Therefore, the leakage current of the main power supply is greater than the total leakage current of each unit. Take into consideration the capacity of the earth leakage breaker or leakage alarm when installing one at the main power supply. To measure the leakage current simply on site, use a measurement tool equipped with a filter, and clamp all the four power wires together. The leakage current measured on the ground wire may not accurate because the leakage current from other systems may be included to the measurement value.
- Do not install a phase advancing capacitor on the unit connected to the same power system with an inverter type unit and its equipment.
- If a large current flows due to the product malfunctions or faulty wiring, both the earth leakage breaker on the product side and the upstream overcurrent breaker may trip almost at the same time. Separate the power system or coordinate all the breakers depending on the system's priority level.

5-1-6. Unit installation

- Your local distributor or a qualified technician must read the Installation Manual that is provided with each unit carefully before performing installation work.
- Consult your local distributor or a qualified technician when installing the unit. Improper installation by an unqualified person may result in water leakage, electric shock, or fire.
- Ensure there is enough space around each unit.

5-1-7. Optional accessories

- Only use accessories recommended by Mitsubishi Electric. Consult your local distributor or a qualified technician when installing them. Improper installation by an unqualified person may result in water leakage, electric leakage, system breakdown, or fire.
- Some optional accessories may not be compatible with the air conditioning unit to be used or may not be suitable for the installation conditions. Check the compatibility when considering any accessories.
- Note that some optional accessories may affect the air conditioner's external form, appearance, weight, operating sound, and other characteristics.

5-1-8. Operation/Maintenance

- Read the Instruction Book that is provided with each unit carefully prior to use.
- Maintenance or cleaning of each unit may be risky and require expertise. Read the Instruction Book to ensure safety. Consult your local distributor or a qualified technician when special expertise is required such as when the indoor unit needs to be cleaned.

5-2. Precautions for Indoor unit

5-2-1. Operating environment

- The refrigerant (R410A) used for air conditioner is non-toxic and nonflammable. However, if the refrigerant leaks, the oxygen level may drop to harmful levels. If the air conditioner is installed in a small room, measures must be taken to prevent the refrigerant concentration from exceeding the safety limit even if the refrigerant should leak.
- If the units operate in the cooling mode at the humidity above 80%, condensation may collect and drip from the indoor units.

5-2-2. Unit characteristics

- The return air temperature display on the remote controller may differ from the ones on the other thermometers.
- The clock on the remote controller may be displayed with a time lag of approximately one minute every month.
- The temperature using a built-in temperature sensor on the remote controller may differ from the actual room temperature due to the effect of the wall temperature.
- Use a built-in thermostat on the remote controller or a separately-sold thermostat when indoor units installed on or in the ceiling operate the automatic cooling/heating switchover.
- The room temperature may rise drastically due to Thermo OFF in the places where the air conditioning load is large such as computer rooms.
- Be sure to use a regular filter. If an irregular filter is installed, the unit may not operate properly, and the operation noise may increase.
- The room temperature may rise over the preset temperature in the environment where the heating air conditioning load is small.

5-2-3. Unit installation

- For simultaneous cooling/heating operation type air conditioners (R2, WR2 series), the G-type BC controller cannot be connected to the 16HP outdoor unit model or above, and the G- and GA-type BC controllers cannot be connected to the 28HP model or above. The GB- and HB-type BC controllers (sub) cannot be connected to the outdoor unit directly, and be sure to use them with GA- and HA-type BC controllers (main).
- The insulation for low pressure pipe between the BC controller and outdoor unit shall be at least 20 mm thick. If the unit is installed on the top floor or in a high-temperature, high-humidity environment, thicker insulation may be necessary.
- Do not have any branching points on the downstream of the refrigerant pipe header.
- When a field-supplied external thermistor is installed or when a device for the demand control is used, abnormal stop of the unit or damage of the electromagnetic contactor may occur. Consult your local distributor for details.
- When indoor units operate a fresh air intake, install a filter in the duct (field-supplied) to remove the dust from the air.
- The 4-way or 2-way Airflow Ceiling Cassette Type units that have an outside air inlet can be connected to the duct, but need a booster fan to be installed at site. Refer to the chapter "Indoor Unit" for the available range for fresh air intake volume.
- Operating fresh air intake on the indoor unit may increase the sound pressure level.

5-3. Precautions for Fresh air intake type indoor unit

5-3-1. Usage

- This unit mainly handles the outside air load, and is not designed to maintain the room temperature. Install other air conditioners for handling the air conditioning load in the room.

5-3-2. Unit characteristics

- This unit cannot perform the drying operation. The unit will continue the fan operation and blow fresh air (air that is not air-conditioned) when the Heating Thermo-OFF or Cooling Thermo-OFF mode is selected.
- The fan may stop tentatively when the unit is connected to the simultaneous cooling/heating operation type outdoor unit (R2, WR2 series) or during the defrost cycle.
- This unit switches the Thermo ON or OFF depending on the room temperature. The outside air is directly supplied into the room during Thermo OFF. Take caution of the cold supply air due to low outside air temperature and of condensation in the room due to high humidity of the outside air.
- Outside air temperature ranges for the operation must be as follows:
Cooling: 21°C D.B./15.5°C W.B. ~ 43°C D.B./35°C W.B.
Heating: -10°C D.B. ~ 20°C D.B.
The unit is forced to operate Thermo OFF (fan operation) when the outside air temperature is as follows.
Cooling: 21°C D.B. or below; Heating: 20°C D.B. or above
- Either a remote controller (sold separately) or a remote sensor (sold separately) must be installed to monitor the room temperature.
- If only this unit is used as an indoor unit, condensation may form at the supply air grill while the unit is operated in the cooling mode. This unit cannot operate dehumidifying.
- Use the unit in the way that the airflow rate will not exceed the 110% of the rated airflow.

5-4. Precautions for Outdoor unit/Heat source unit

5-4-1. Installation environment

- Outdoor unit with salt-resistant specification is recommended to use in a place where it is subject to salt air.
- Even when the unit with salt-resistant specification is used, it is not completely protected against corrosion. Be sure to follow the directions or precautions described in Instructions Book and Installation Manual for installation and maintenance. The salt-resistant specification is referred to the guidelines published by JRAIA (JRA9002).
- Install the unit in a place where the flow of discharge air is not obstructed. If not, the short-cycling of discharge air may occur.
- Provide proper drainage around the unit base, because the condensation may collect and drip from the outdoor units. Provide water-proof protection to the floor when installing the units on the rooftop.
- In a region where snowfall is expected, install the unit so that the outlet faces away from the direction of the wind, and install a snow guard to protect the unit from snow. Install the unit on a base approximately 50 cm higher than the expected snowfall. Close the openings for pipes and wiring, because the ingress of water and small animals may cause equipment damage. If SUS snow guard is used, refer to the Installation Manual that comes with the snow guard and take caution for the installation to avoid the risk of corrosion.
- When the unit is expected to operate continuously for a long period of time at outside air temperatures of below 0°C, take appropriate measures, such as the use of a unit base heater, to prevent icing on the unit base. (Not applicable to the PUMY series)
- Install the snow guard so that the outlet/inlet faces away from the direction of the wind.
- When the snow accumulates approximately 50 cm or more on the snow guard, remove the snow from the guard. Install a roof that is strong enough to withstand snow loads in a place where snow accumulates.
- Provide proper protection around the outdoor units in places such as schools to avoid the risk of injury.
- A cooling tower and heat source water circuit should be a closed circuit that water is not exposed to the atmosphere. When a tank is installed to ensure that the circuit has enough water, minimize the contact with outside air so that the oxygen from being dissolved in the water should be 1 mg/L or less.
- Install a strainer (50 mesh or more recommended) on the water pipe inlet on the heat source unit.
- Interlock the heat source unit and water circuit pump.
- Note the followings to prevent the freeze bursting of pipe when the heat source unit is installed in a place where the ambient temperature can be 0°C or below.
 - Keep the water circulating to prevent it from freezing when the ambient temperature is 0°C or below.
 - Before a long period of non use, be sure to purge the water out of the unit.
- Salt-resistant unit is resistant to salt corrosion, but not salt-proof.
Please note the following when installing and maintaining outdoor units in marine atmosphere.
 1. Install the salt-resistant unit out of direct exposure to sea breeze, and minimize the exposure to salt water mist.
 2. Avoid installing a sun shade over the outdoor unit, so that rain will wash away salt deposits off the unit.
 3. Install the unit horizontally to ensure proper water drainage from the base of the unit. Accumulation of water in the base of the outdoor unit will significantly accelerate corrosion.
 4. Periodically wash salt deposits off the unit, especially when the unit is installed in a coastal area.
 5. Repair all noticeable scratches after installation and during maintenance.
 6. Periodically check the unit, and apply anti-rust agent and replace corroded parts as necessary.

5-4-2. Circulating water

- Follow the guidelines published by JRAIA (JRA-GL02-1994) to check the water quality of the water in the heat source unit regularly.
- A cooling tower and heat source water circuit should be a closed circuit that water is not exposed to the atmosphere. When a tank is installed to ensure that the circuit has enough water, minimize the contact with outside air so that the oxygen from being dissolved in the water should be 1 mg/L or less.

5-4-3. Unit characteristics

- When the Thermo ON and OFF is frequently repeated on the indoor unit, the operation status of outdoor units may become unstable.

5-4-4. Relevant equipment

- Provide grounding in accordance with the local regulations.

5-5. Precautions for Control-related items**5-5-1. Product specification**

- To introduce the MELANS system, a consultation with us is required in advance. Especially to introduce the electricity charge apportioning function or energy-save function, further detailed consultation is required. Consult your local distributor for details.
- Billing calculation for AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J/TG-2000A, or the billing calculation unit is unique and based on our original method. (Backup operation is included.) It is not based on the metering method, and do not use it for official business purposes. It is not the method that the amount of electric power consumption (input) by air conditioner is calculated. Note that the electric power consumption by air conditioner is apportioned by using the ratio corresponding to the operation status (output) for each air conditioner (indoor unit) in this method.
- In the apportioned billing function for AE-200E/AE-50E/EW-50E/AG-150A and EB-50GU-J, use separate watt-hour meters for A-control units, K-control units, and packaged air conditioner for City Multi air conditioners. It is recommended to use an individual watt-hour meter for the large-capacity indoor unit (with two or more addresses).
- When using the peak cut function on the AE-200E/AE-50E/EW-50E/AG-150A or EB-50GU-J, note that the control is performed once every minute and it takes time to obtain the effect of the control. Take appropriate measures such as lowering the criterion value. Power consumption may exceed the limits if AE-200E/AE-50E/EW-50E/AG-150A or EB-50GU-J malfunctions or stops. Provide a back-up remedy as necessary.
- The controllers cannot operate while the indoor unit is OFF. (No error)
Turn ON the power to the indoor unit when operating the controllers.
- When using the interlocked control function on the AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J/PAC-YG66DCA or PAC-YG63MCA, do not use it for the control for the fire prevention or security. (This function should never be used in the way that would put people's lives at risk.) Provide any methods or circuit that allow ON/OFF operation using an external switch in case of failure.

5-5-2. Installation environment

- The surge protection for the transmission line may be required in areas where lightning strikes frequently occur.
- A receiver for a wireless remote controller may not work properly due to the effect of general lighting. Leave a space of at least 1 m between the general lighting and receiver.
- When the Auto-elevating panel is used and the operation is made by using a wired remote controller, install the wired remote controller to the place where all air conditioners controlled (at least the bottom part of them) can be seen from the wired remote controller. If not, the descending panel may cause damage or injury, and be sure to use a wireless remote controller designed for use with elevating panel (sold separately).
- Install the wired remote controller (switch box) to the place where the following conditions are met.
 - Where installation surface is flat
 - Where the remote controller can detect an accurate room temperature
The temperature sensors that detect a room temperature are installed both on the remote controller and indoor unit. When a room temperature is detected using the sensor on the remote controller, the main remote controller is used to detect a room temperature. In this case, follow the instructions below.
 - Install the controller in a place where it is not subject to the heat source.
(If the remote controller faces direct sunlight or supply air flow direction, the remote controller cannot detect an accurate room temperature.)
 - Install the controller in a place where an average room temperature can be detected.
 - Install the controller in a place where no other wires are present around the temperature sensor.
(If other wires are present, the remote controller cannot detect an accurate room temperature.)
- To prevent unauthorized access, always use a security device such as a VPN router when connecting AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J or TG-2000A to the Internet.

The installer and/or air conditioning system specialist shall secure safety against refrigerant leakage according to local regulations or standards. The following standard may be applicable if no local regulation or standard is available.

6-1. Refrigerant property

R410A refrigerant is harmless and incombustible. The R410A is heavier than the indoor air in density. Leakage of the refrigerant in a room has possibility to lead to a hypoxia situation. Therefore, the critical concentration specified below shall not be exceeded even if the leakage happens.

• Critical concentration

Critical concentration hereby is the refrigerant concentration in which no human body would be hurt if immediate measures can be taken when refrigerant leakage happens.

Critical concentration of R410A: 0.44kg/m³
(The weight of refrigeration gas per 1 m³ air conditioning space.);

* The Critical concentration is subject to ISO5149, EN378-1.

For the CITY MULTI system, the concentration of refrigerant leaked should not have a chance to exceed the critical concentration in any situation.

6-2. Confirm the Critical concentration and take countermeasure

The maximum refrigerant leakage concentration (Rmax) is defined as the result of the possible maximum refrigerant weight (Wmax) leaked into a room divided by its room capacity (V). It is referable to Fig.6-1. The refrigerant of Outdoor unit here includes its original charge and additional charge at the site.

The additional charge is calculated according to "3-3. Refrigerant charging calculation" and shall not be over charged at the site.

Procedure 6-2-1~3 tells how to confirm maximum refrigerant leakage concentration (Rmax) and how to take countermeasures against a possible leakage.

Fig. 6-1 The maximum refrigerant leakage concentration

6-2-1. Find the room capacity (V),

If a room having total opening area more than 0.15% of the floor area at a low position with another room/space, the two rooms/space are considered as one. The total space shall be added up.

6-2-2. Find the possible maximum leakage (Wmax) in the room. If a room has Indoor unit(s) from more than 1 Outdoor unit, add up the refrigerant of the Outdoor units.

6-2-3. Divide (Wmax) by (V) to get the maximum refrigerant leakage concentration (Rmax).

6-2-4. Find if there is any room in which the maximum refrigerant leakage concentration (Rmax) is over 0.44kg/m³.

If no, then the CITY MULTI is safe against refrigerant leakage.

If yes, following countermeasure is recommended to do at site.

Countermeasure 1: Let-out (making V bigger)

Design an opening of more than 0.15% of the floor area at a low position of the wall to let out the refrigerant whenever leaked.

e.g. make the upper and lower seams of door big enough.

Countermeasure 2: Smaller total charge (making Wmax smaller)

e.g. Avoid connecting more than 1 Outdoor unit to one room.

e.g. Using smaller model size but more Outdoor units.

e.g. Shorten the refrigerant piping as much as possible.

Countermeasure 3: Fresh air in from the ceiling (Ventilation)

As the density of the refrigerant is bigger than that of the air, fresh air supply from the ceiling is better than air exhausting from the ceiling.

Fresh air supply solution refers to Fig.6-2~4.

Fig.6-2. Fresh air supply always ON

Fig.6-3. Fresh air supply upon sensor action

Fig.6-4. Fresh air supply and refrigerant shut-off upon sensor action

Note 1. Countermeasure 3 should be done in a proper way in which the fresh air supply shall be on whenever the leakage happens.

Note 2. In principle, MITSUBISHI ELECTRIC requires proper piping design, installation and air-tight testing after installation to avoid leakage happening.

In the area should earthquake happen, anti-vibration measures should be fully considered.

The piping should consider the extension due to the temperature variation.

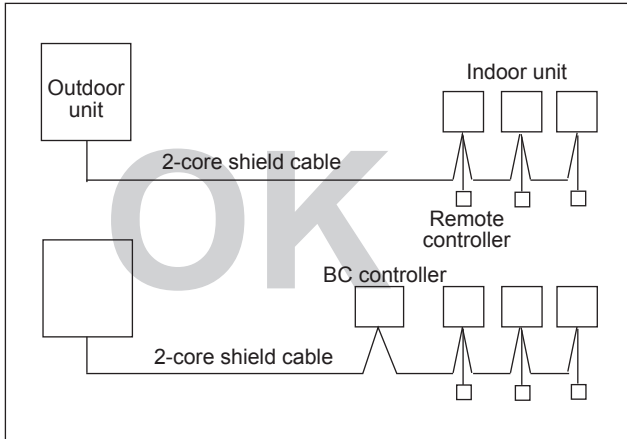

CITY MULTI

1-1. General cautions

- ① Follow ordinance of your governmental organization for technical standard related to electrical equipment, wiring regulations, and guidance of each electric power company.
- ② Wiring for control (hereinafter referred to as transmission cable) shall be (50mm[1-5/8in.] or more) apart from power source wiring so that it is not influenced by electric noise from power source wiring. (Do not insert transmission cable and power source wire in the same conduit.)
- ③ Be sure to provide designated grounding work to outdoor unit.
- ④ Give some allowance to wiring for electrical part box of indoor and outdoor units, because the box is sometimes removed at the time of service work.
- ⑤ Never connect 380~415V(220~240V) power source to terminal block of transmission cable. If connected, electrical parts will be damaged.
- ⑥ Use 2-core shield cable for transmission cable. If transmission cables of different systems are wired with the same multiple-core cable, the resultant poor transmitting and receiving will cause erroneous operations.
- ⑦ When extending the transmission line, make sure to extend the shield cable as well.

1-3. Power cable specifications

PURY-P-YLM-A1

Thickness of wire for main power supply, capacities of the switch and system impedance

	Model	Minimum wire thickness (mm ²)			Ground-fault interrupter *1	Local switch (A)		Breaker for wiring (A) (Non-fuse breaker)	Max. Permissible System Impedance
		Main cable	Branch	Ground		Capacity	Fuse		
Outdoor unit	PURY-P200YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	25	25	30	*2
	PURY-P250YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PURY-P300YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PURY-P350YLM-A1	6.0	-	6.0	40A 100mA 0.1sec. or less	40	40	40	0.23Ω
	PURY-P400YLM-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.20Ω
	PURY-P450YLM-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.19Ω
Total operating current of the indoor unit	F0 = 20A or less *3	1.5	1.5	1.5	Current sensitivity *4	16	16	20	(apply to IEC61000-3-3)
	F0 = 30A or less *3	2.5	2.5	2.5	Current sensitivity *4	25	25	30	(apply to IEC61000-3-3)
	F0 = 40A or less *3	4.0	4.0	4.0	Current sensitivity *4	32	32	40	(apply to IEC61000-3-3)

*1 The Ground-fault interrupter should support Inverter circuit. The Ground-fault interrupter should combine using of local switch or wiring breaker.

*2 Meet technical requirements of IEC61000-3-3

*3 Please take the larger of F1 or F2 as the value for F0.

F1 = Total operating maximum current of the indoor units × 1.2

F2 = {V1 × (Quantity of Type1)/C} + {V1 × (Quantity of Type2)/C} + {V1 × (Quantity of Type3)/C} + {V1 × (Quantity of Others)/C}

Indoor unit		V1	V2
Type1	PLFY-VBM, PMFY-VBM, PEFY-VMS, PCFY-VKM, PKFY-VHM, PKFY-VKM, PFFY-VKM, PFFY-VLRMM	18.6	2.4
Type2	PEFY-VMA	38	1.6
Type3	PEFY-VMHS	13.8	4.8
Others	Other indoor unit	0	0

C: Multiple of tripping current at tripping time 0.01s

Please pick up "C" from the tripping characteristic of the breaker.

<Example of "F2" calculation>

*Condition PEFY-VMS × 4 + PEFY-VMA × 1, C = 8 (refer to right sample chart)

F2 = 18.6 × 4/8 + 38 × 1/8

= 14.05

→ 16 A breaker (Tripping current = 8 × 16 A at 0.01s)

*4 Current sensitivity is calculated using the following formula.

G1 = (V2 × Quantity of Type1) + (V2 × Quantity of Type2) + (V2 × Quantity of Type3) + (V2 × Quantity of Others) + (V3 × Wire length [km])

G1	Current sensitivity	Wire thickness	V3
30 or less	30 mA 0.1sec or less	1.5 mm ²	48
100 or less	100 mA 0.1sec or less	2.5 mm ²	56
		4.0 mm ²	66

1. Use dedicated power supplies for the outdoor unit and indoor unit. Ensure OC and OS are wired individually.
2. Bear in mind ambient conditions (ambient temperature, direct sunlight, rain water, etc.) when proceeding with the wiring and connections.
3. The wire size is the minimum value for metal conduit wiring. If the voltage drops, use a wire that is one rank thicker in diameter. Make sure the power-supply voltage does not drop more than 10%. Make sure that the voltage imbalance between the phases is 2% or less.
4. Specific wiring requirements should adhere to the wiring regulations of the region.
5. Power supply cords of parts of appliances for outdoor use shall not be lighter than polychloroprene sheathed flexible cord (design 60245 IEC57). For example, use wiring such as YZW.
6. A switch with at least 3 mm contact separation in each pole shall be provided when the Air Conditioner is installed.

WARNING

- ◆ Be sure to use specified wires for connections and ensure no external force is imparted to terminal connections. If connections are not fixed firmly, heating or fire may result.
- ◆ Be sure to use the appropriate type of overcurrent protection switch. Note that generated overcurrent may include some amount of direct current.

CAUTION

- ◆ The breakers for current leakage should support Inverter circuit. (e.g. Mitsubishi Electric's NV-S series or equivalent). If no earth leakage breaker is installed, it may cause an electric shock.
- ◆ Breakers for current leakage should combine using of switch.
- ◆ Do not use anything other than a breaker with the correct capacity. Using a breaker of too large capacity may cause malfunction or fire.
- ◆ If a large electric current flows due to malfunction or faulty wiring, earth-leakage breakers on the unit side and on the upstream side of the power supply system may both operate. Depending on the importance of the system, separate the power supply system or take protective coordination of breakers.

Note

- ◆ This device is intended for the connection to a power supply system with a maximum permissible system impedance shown in the above table at the interface point (power service box) of the user's supply.
- ◆ The user must ensure that this device is connected only to a power supply system which fulfils the requirement above. If necessary, the user can ask the public power supply company for the system impedance at the interface point.
- ◆ This equipment complies with IEC 61000-3-12 provided that the short-circuit power Ssc is greater than or equal to Ssc (*2) at the interface point between the user's supply and the public system. It is the responsibility of the installer or user of the equipment to ensure, by consultation with the distribution network operator if necessary, that the equipment is connected only to a supply with a short-circuit power Ssc greater than or equal to Ssc (*2).

Ssc(*2)

Model	Ssc(MVA)

PURY-P250YLM-A1	1.77
PURY-P300YLM-A1	2.19
PURY-P350YLM-A1	2.64
PURY-P400YLM-A1	2.98
PURY-P450YLM-A1	3.26
PURY-P500YLM-A1	3.98

PURY-EP-YLM-A1

Thickness of wire for main power supply, capacities of the switch and system impedance

	Model	Minimum wire thickness (mm ²)			Ground-fault interrupter *1	Local switch (A)		Breaker for wiring (A) (Non-fuse breaker)	Max. Permissible System Impedance
		Main cable	Branch	Ground		Capacity	Fuse		
Outdoor unit	PURY-EP200YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	25	25	30	*2
	PURY-EP250YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PURY-EP300YLM-A1	4.0	-	4.0	30A 100mA 0.1sec. or less	32	32	30	*2
	PURY-EP350YLM-A1	6.0	-	6.0	40A 100mA 0.1sec. or less	40	40	40	0.23Ω
	PURY-EP400YLM-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.20Ω
	PURY-EP450YLM-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.19Ω
	PURY-EP500YLM-A1	10.0	-	10.0	60A 100mA 0.1sec. or less	63	63	60	0.15Ω
Total operating current of the indoor unit	F0 = 20A or less *3	1.5	1.5	1.5	Current sensitivity *4	16	16	20	(apply to IEC61000-3-3)
	F0 = 30A or less *3	2.5	2.5	2.5	Current sensitivity *4	25	25	30	(apply to IEC61000-3-3)
	F0 = 40A or less *3	4.0	4.0	4.0	Current sensitivity *4	32	32	40	(apply to IEC61000-3-3)

*1 The Ground-fault interrupter should support Inverter circuit. The Ground-fault interrupter should combine using of local switch or wiring breaker.

*2 Meet technical requirements of IEC61000-3-3

*3 Please take the larger of F1 or F2 as the value for F0.

F1 = Total operating maximum current of the indoor units × 1.2

F2 = {V1 × (Quantity of Type1)/C} + {V1 × (Quantity of Type2)/C} + {V1 × (Quantity of Type3)/C} + {V1 × (Quantity of Others)/C}

Indoor unit		V1	V2
Type1	PLFY-VBM, PMFY-VBM, PEFY-VMS, PCFY-VKM,	18.6	2.4
Type2	PEFY-VMA	38	1.6
Type3	PEFY-VMHS	13.8	4.8
Others	Other indoor unit	0	0

C: Multiple of tripping current at tripping time 0.01s

Please pick up "C" from the tripping characteristic of the breaker.

<Example of "F2" calculation>

*Condition PEFY-VMS × 4 + PEFY-VMA × 1, C = 8 (refer to right sample chart)

F2 = 18.6 × 4/8 + 38 × 1/8

= 14.05

→16 A breaker (Tripping current = 8 × 16 A at 0.01s)

*4 Current sensitivity is calculated using the following formula.

G1 = (V2 × Quantity of Type1) + (V2 × Quantity of Type2) + (V2 × Quantity of Type3) + (V2 × Quantity of Others) + (V3 × Wire length [km])

G1	Current sensitivity
30 or less	30 mA 0.1sec or less
100 or less	100 mA 0.1sec or less

Wire thickness	V3
1.5 mm ²	48
2.5 mm ²	56
4.0 mm ²	66

- Use dedicated power supplies for the outdoor unit and indoor unit. Ensure OC and OS are wired individually.
- Bear in mind ambient conditions (ambient temperature, direct sunlight, rain water, etc.) when proceeding with the wiring and connections.
- The wire size is the minimum value for metal conduit wiring. If the voltage drops, use a wire that is one rank thicker in diameter. Make sure the power-supply voltage does not drop more than 10%. Make sure that the voltage imbalance between the phases is 2% or less.
- Specific wiring requirements should adhere to the wiring regulations of the region.
- Power supply cords of parts of appliances for outdoor use shall not be lighter than polychloroprene sheathed flexible cord (design 60245 IEC57). For example, use wiring such as YZW.
- A switch with at least 3 mm contact separation in each pole shall be provided when the Air Conditioner is installed.

WARNING

- Be sure to use specified wires for connections and ensure no external force is imparted to terminal connections. If connections are not fixed firmly, heating or fire may result.
- Be sure to use the appropriate type of overcurrent protection switch. Note that generated overcurrent may include some amount of direct current.

CAUTION

- The breakers for current leakage should support Inverter circuit. (e.g. Mitsubishi Electric's NV-S series or equivalent). If no earth leakage breaker is installed, it may cause an electric shock.
- Breakers for current leakage should combine using of switch.
- Do not use anything other than a breaker with the correct capacity. Using a breaker of too large capacity may cause malfunction or fire.
- If a large electric current flows due to malfunction or faulty wiring, earth-leakage breakers on the unit side and on the upstream side of the power supply system may both operate. Depending on the importance of the system, separate the power supply system or take protective coordination of breakers.

Note

- This device is intended for the connection to a power supply system with a maximum permissible system impedance shown in the above table at the interface point (power service box) of the user's supply.
- The user must ensure that this device is connected only to a power supply system which fulfils the requirement above. If necessary, the user can ask the public power supply company for the system impedance at the interface point.
- This equipment complies with IEC 61000-3-12 provided that the short-circuit power Ssc is greater than or equal to Ssc (*2) at the interface point between the user's supply and the public system. It is the responsibility of the installer or user of the equipment to ensure, by consultation with the distribution network operator if necessary, that the equipment is connected only to a supply with a short-circuit power Ssc greater than or equal to Ssc (*2).

*1 The Ground-fault interrupter should support Inverter circuit. (e.g. Mitsubishi Electric's NV-S series or equivalent).
 *2 Ground-fault interrupter should combine using of local switch or wiring breaker.
 *3 It shows data for B-type fuse of the breaker for current leakage.
 *4 If a large electric current flows due to malfunction or faulty wiring, earth-leakage breakers on the unit side and on the centralized controller side may both operate.
 Depending on the importance of the system, separate the power supply system or take protective coordination of breakers.

The local standards and/or regulations is applicable at a higher priority.
 1-4-2. PURY-EP200, 250, 300, 350, 400, 450, 500YLM-A1

Note:

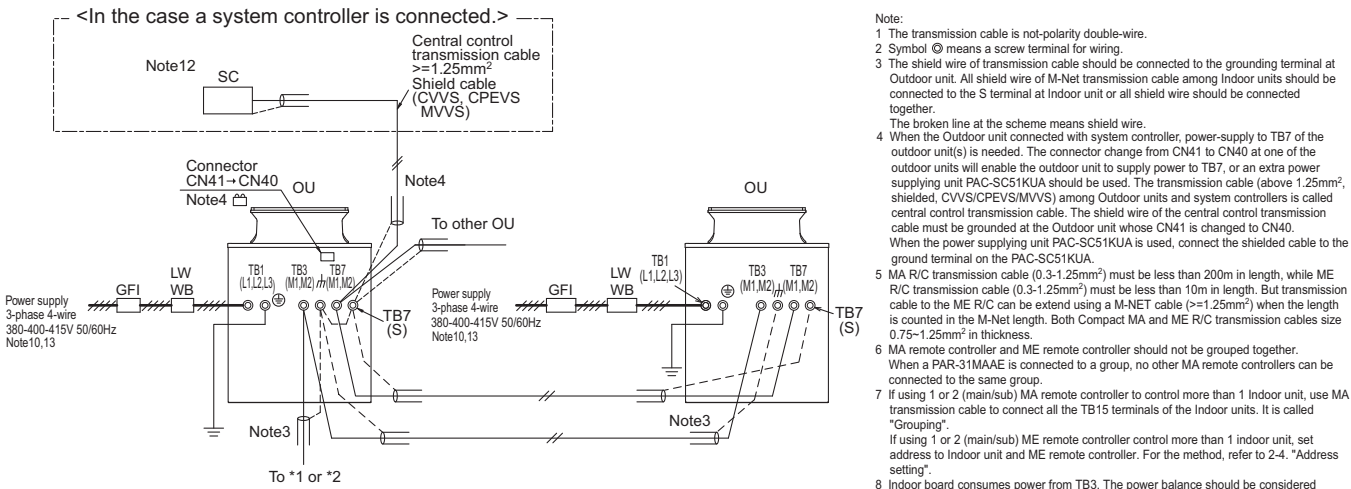

- 1 The transmission cable is not-polarity double-wire.
- 2 Symbol © means a screw terminal for wiring.
- 3 The shield wire of transmission cable should be connected to the grounding terminal at Outdoor unit. All shield wire of M-Net transmission cable among Indoor units should be connected to the S terminal at Indoor unit or all shield wire should be connected together.
- 4 The broken line at the scheme means shield wire.
- 4 When the Outdoor unit connected with system controller, power-supply to TB7 of the outdoor unit(s) is needed. The connector change from CN41 to CN40 at one of the outdoor units will enable the outdoor unit to supply power to TB7, or an extra power supplying unit PAC-SC51KUA should be used. The transmission cable (above 1.25mm², shielded, CVVS/CPEVS/MVVS) among Outdoor units and system controllers is called central control transmission cable. The shield wire of the central control transmission cable must be grounded at the Outdoor unit whose CN41 is changed to CN40. When the power supplying unit PAC-SC51KUA is used, connect the shielded cable to the ground terminal on the PAC-SC51KUA.
- 5 MA R/C transmission cable (0.3-1.25mm²) must be less than 200m in length, while ME R/C transmission cable (0.3-1.25mm²) must be less than 10m in length. But transmission cable to the ME R/C can be extend using a M-NET cable (>=1.25mm²) when the length is counted in the M-Net length. Both Compact MA and ME R/C transmission cables size 0.75-1.25mm² in thickness.
- 6 MA remote controller and ME remote controller should not be grouped together. When a PAR-31MAA is connected to a group, no other MA remote controllers can be connected to the same group.
- 7 If using 1 or 2 (main/sub) MA remote controller to control more than 1 Indoor unit, use MA transmission cable to connect all the TB15 terminals of the Indoor units. It is called "Grouping".
If using 1 or 2 (main/sub) ME remote controller control more than 1 indoor unit, set address to Indoor unit and ME remote controller. For the method, refer to 2-4. "Address setting".
- 8 Indoor board consumes power from TB3. The power balance should be considered according to System Design 2-3 "System configuration restrictions".
- 9 If transmission booster is needed, be sure to connect the shield wires to the both sides to the booster.
- 10 The critical current for choosing power source equipment is approximate 1.4 times of total rated current of the Outdoor unit(s) or Indoor unit(s).
- 11 Numbers shown with () indicates a diameter of the compact remote controller.
- 12 When System controller (SC) is connected to the system, turn the SW5-1 on.
- 13 The phases of electricity power must be confirmed to be right used. Phase-reverse, or phase-missing could break the controllers.

2-1. Transmission cable length limitation

2-1-1. Using MA Remote controller

Long transmission cable causes voltage down, therefore, the length limitation should be obeyed to secure proper transmission.

Max. length via Outdoor (M-NET cable)	$L_1+L_2+L_3+L_4, L_1+L_2+L_6+L_7, L_3+L_4+L_6+L_7$	$\leq 500\text{m}[1640\text{ft.}]$	1.25mm^2 [AWG16] or thicker
Max. length to Outdoor (M-NET cable)	$L_1+L_8, L_3+L_4, L_6, L_2+L_6+L_8, L_7$	$\leq 200\text{m}[656\text{ft.}]$	1.25mm^2 [AWG16] or thicker
Max. length from MA to Indoor	$a_1+a_2, a_1+a_2+a_3+a_4$	$\leq 200\text{m}[656\text{ft.}]$	$0.3\text{-}1.25\text{mm}^2$ [AWG22-16]
24VDC to AG-150A	n	$\leq 50\text{m}[164\text{ft.}]$	$0.75\text{-}2.0\text{mm}^2$ [AWG18-14]

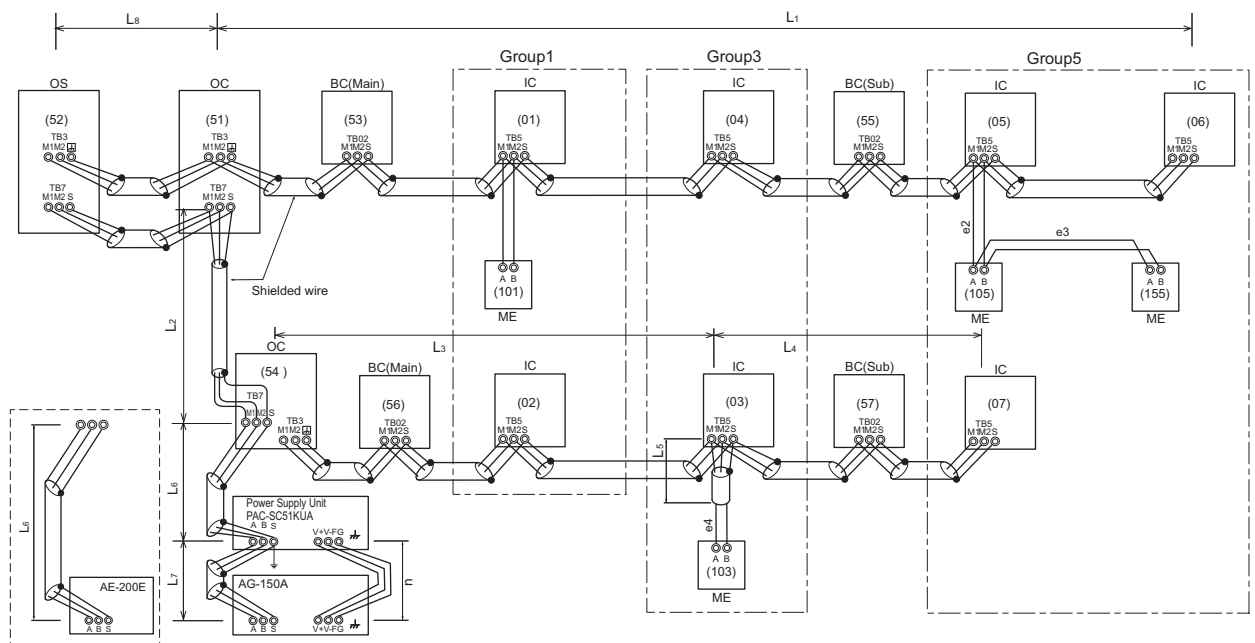

OC, OS: Outdoor unit controller; IC: Indoor unit controller; MA: MA remote controller

2-1-2. Using ME Remote controller

Long transmission cable causes voltage down, therefore, the length limitation should be obeyed to secure proper transmission.

Max. length via Outdoor (M-NET cable)	$L_1+L_2+L_3+L_4, L_1+L_2+L_6+L_7, L_1+L_2+L_3+L_5, L_3+L_4+L_6+L_7$	$\leq 500\text{m}[1640\text{ft.}]$	1.25mm^2 [AWG16] or thicker
Max. length to Outdoor (M-NET cable)	$L_1+L_8, L_3+L_4, L_6, L_2+L_6+L_8, L_7, L_3+L_5$	$\leq 200\text{m}[656\text{ft.}]$	1.25mm^2 [AWG16] or thicker
Max. length from ME to Indoor	e_1, e_2+e_3, e_4	$\leq 10\text{m}[32\text{ft.}]^*1$	$0.3\text{-}1.25\text{mm}^2$ [AWG22-16] *1
24VDC to AG-150A	n	$\leq 50\text{m}[164\text{ft.}]$	$0.75\text{-}2.0\text{mm}^2$ [AWG18-14]

*1. If the length from ME to Indoor exceed 10m, use 1.25mm^2 [AWG16] shielded cable, but the total length should be counted into Max. length via Outdoor.

OC, OS: Outdoor unit controller; IC: Indoor unit controller; ME: ME remote controller

2-2. Transmission cable specifications

	Transmission cables (Li)	M-NET remote controller cables	MA Remote controller cables
Type of cable	Shielding wire (2-core) CVVS, CPEVS or MVVS	Sheathed 2-core cable (unshielded) CVV	
Cable size	More than 1.25 mm ² [AWG16]	0.3 ~ 1.25 mm ² [AWG22~16] (0.75 ~ 1.25 mm ² [AWG18~16])*1	0.3 ~ 1.25 mm ² [AWG22 ~16] *2
Remarks	Max length: within 200 m	When 10 m [32ft] is exceeded, use cables with the same specification as transmission cables.	Max length: 200 m [656ft] *3

*1 Connected with PZ-52SF.

*2 To wire PAR-31MAA(E), Simple MA remote controller use a wire with a diameter of 0.3 mm² [AWG22]

*3 When a PAR-31MAA(E) and other MA remote controllers are connected in the same group, the maximum length of cable should be 100 m.

CVVS, MVVS: PVC insulated PVC jacketed shielded control cable
CPEVS: PE insulated PVC jacketed shielded communication cable
CVV: PV insulated PVC sheathed control cable

2-3. System configuration restrictions

2-3-1. Common restrictions for the CITYMULTI system

For each Outdoor unit, the maximum connectable quantity of Indoor unit is specified at its Specifications table.

- A) 1 Group of Indoor units can have 1-16 Indoor units;
*OA processing unit GUF-RD(H) is considered as Indoor unit.
- B) Maximum 2 remote controllers for 1 Group;
*MA/ME remote controllers cannot be present together in 1group.
*When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.
- C) 1 LOSSNAY unit can interlock maximum 16 Indoor units; 1 Indoor unit can interlock only 1 LOSSNAY unit.
- D) Maximum 3 System controllers are connectable when connecting to TB3 of the Outdoor unit.
- E) Maximum 6 System controllers are connectable when connecting to TB7 of the Outdoor unit, if the transmission power is supplied by the Outdoor unit.
- F) 4 System controllers or more are connectable when connecting to TB7 of the Outdoor unit, if the transmission power is supplied by the power supply unit PAC-SC51KUA. Details refer to 2-3-3-C.
*System controller connected as described in D) and E) would have a risk that the failure of connected Outdoor unit would stop power supply to the System controller.

2-3-2. Ensuring proper communication power for M-NET

In order to ensure proper communication among Outdoor unit, Indoor unit, LOSSNAY, and OA processing unit GUF-RD(H), and Controllers, the transmission power situation for the M-NET should be observed. In some cases, Transmission booster should be used. Taking the power consumption of Indoor unit sized P15-P140 as 1, the equivalent power consumption or supply of others are listed at Table 2-3-1 and Table 2-3-2.

Table 2-3-1 The equivalent power consumption

Indoor, OA unit	Indoor unit	BC controller	PWFY				MARC. LOSSNAY	ME Remote Contr.		System Contr.			ON/OFF Contr.	MN Converter	Outdoor unit
Sized P15-P140 GUF-50, 100	Sized P200, P250	CMB	P100VM -E-BU	P100VM -E1-AU P100VM -E2-AU	P200VM -E1-AU P200VM -E2-AU	PAR-31MAA(E) PAC-YT52CRA PAR-FA32MA LGH-RVX-E PZ-61DR-E PZ-43SMF-E	PAC-YG60MCA PAC-YG66DCA PAC-YG63MCA	PAR-U02MEDA PAC-IF01AHC	AE-200E AE-50E	AG-150A EB-50GU-J	AT-50B	EW-50E	PAC -YT40ANRA	CMS-MNG-E	TB7 power consumption
1	7	2	6	1	5	0	0.25	0.5	0	0.5	4	0	1	2	0

*RC : Remote Controller

Table 2-3-2 The equivalent power supply

Transmission Booster	Power supply unit	Expansion controller	BM ADAPTER	System Controller		Outdoor unit	Outdoor unit
PAC-SF46EPA	PAC-SC51KUA	PAC-YG50ECA	BAC-HD150	AE-200E/AE-50E	EW-50E	Connector TB3 and TB7 total *	Connector TB7 only
25	5	6	6	0 ¹⁾	1.5	32	6

*If PAC-SC51KUA is used to supply power at TB7 side, no power supply need from Outdoor unit at TB7, Connector TB3 itself will therefore have 32. Not applicable to the PUMY model.

*1 AE-200E/AE-50E has a built-in function to supply power to the M-NET transmission line. The amount of power that an AE-200E or an AE-50E can supply is equivalent to the power required by an MN converter (CMS-MNG-E) that is used for maintenance.

With the equivalent power consumption values in Table 2-3-1 and Table 2-3-2, PAC-SF46EPA can be designed into the air-conditioner system to ensure proper system communication according to 2-3-2-A, B, C.

- 2-3-2-A) Firstly, count from TB3 at TB3 side the total quantity of Indoor units, OA processing units, ME remote controller, and System controllers. If the total quantity reaches 40, a PAC-SF46EPA should be set. In this case, Indoor units sized P200 and 250 are counted as 2 indoor units, but MA remote controller(s), PZ-61DR-E, and PZ-43SMF-E are NOT counted.
- 2-3-2-B) Secondly, count from TB7 side to TB3 side the total transmission power consumption. If the total power consumption reaches 32, a PAC-SF46EPA should be set. Yet, if a PAC-SC51KUA or another controller with a built-in power supply, such as PAC-YG50ECA, is used to supply power at TB7 side, count from TB3 side only.
- 2-3-2-C) Thirdly, count from TB7 at TB7 side the total transmission power consumption, If the total power consumption reaches 6, a PAC-SF46EPA should be set.

■ System example

2-3-3. Ensuring proper power supply to System controller

The power to System controller (excluding AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) is supplied via M-NET transmission line. M-NET transmission line at TB7 side is called Centralized control transmission line while one at TB3 side is called Indoor-Outdoor transmission line. There are 3 ways to supply power to the System controller .

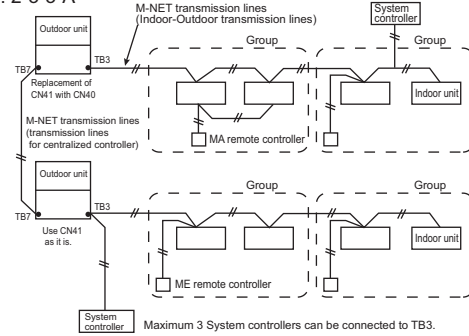

- A) Connecting to TB3 of the Outdoor unit and receiving power from the Outdoor unit.
- B) Connecting to TB7 of the Outdoor unit and receiving power from the Outdoor unit.
- C) Connecting to TB7 of the Outdoor unit but receiving power from power supply unit PAC-SC51KUA.

* System controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) have a built-in function to supply power to the M-NET transmission lines, so no power needs to be supplied to the M-NET transmission lines from the outdoor units or from PAC-SC51KUA.

2-3-3-A. When connecting to TB3 of the Outdoor unit and receiving power from the Outdoor unit.

Maximum 3 System controllers can be connected to TB3. If there is more than 1 Outdoor unit, it is necessary to replace power supply switch connector CN41 with CN40 on one Outdoor unit.

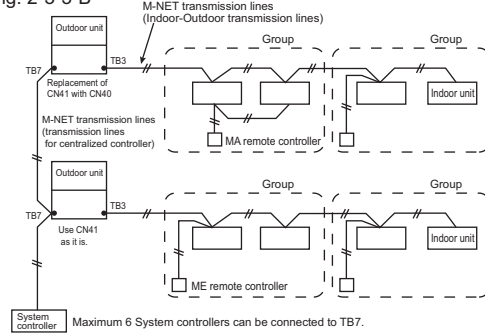

Fig. 2-3-3-A

2-3-3-B. When connecting to TB7 of the Outdoor unit and receiving power from the Outdoor unit.

Maximum 6 System controllers can be connected to TB7 and receiving power from the Outdoor unit. It is necessary to replace power supply switch connector CN41 with CN40 on one Outdoor unit.

Fig. 2-3-3-B

2-3-3-C. When connecting to TB7 of the Outdoor unit but receiving power from PAC-SC51KUA.

When using PAC-SC51KUA to supply transmission power, the power supply connector CN41 on the Outdoor units should be kept as it is. It is also a factory setting. 1 PAC-SC51KUA supports maximum 1 AG-150A unit due to the limited power 24VDC at its TB3. However, 1 PAC-SC51KUA supplies transmission power at its TB2 equal to 5 Indoor units, which is referable at Table 2-3-2. If PZ-52SF-E, System controller, ON/OFF controller connected to TB7 consume transmission power more than 5 (Indoor units), Transmission booster PAC-SF46EPA is needed. PAC-SF46EPA supplies transmission power equal to 25 Indoor units.

Fig. 2-3-3-C

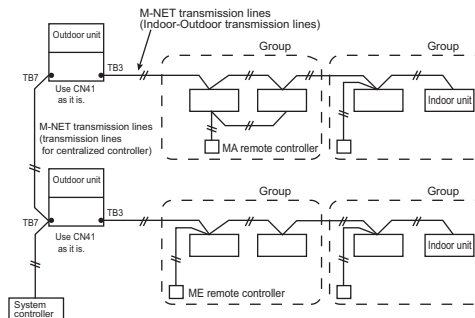

CAUTION

- AG-150A*1 is recommended to connect to TB7 because it performs back-up to a number of data. In an air conditioner system has more than 1 Outdoor units, AG-150A receiving transmission power through TB7 on one of the Outdoor units would have a risk that the connected Outdoor unit failure would stop power supply to AG-150A, and disrupt the whole system. When applying apportioned electric power function, AG-150A is necessary to be connected to TB7 and has its own power supply unit PAC-SC51KUA.*2
- *1: AG-150A is an example model of system controllers.
- *2: Power supply unit PAC-SC51KUA is for AG-150A.

- How to connect system controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) to a given system
System controllers (AE-200E, AE-50E, EW-50E, BAC-HD150, LM-AP) have a built-in function to supply power to the M-NET transmission lines, so no power needs to be supplied to the M-NET transmission lines from the outdoor units or from PAC-SC51KUA.
Leave the power supply connector on the outdoor unit connected to CN41 as it is. Refer to 2-3-2 for information about the power-supply capacity of each system controller (EW-50E, BAC-HD150, LM-AP) to the low-level system controllers.

Fig. 2-3-3-D

2-3-4. Power supply to LM-AP

1-phase 220-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when connecting only the LM-AP. Yet, make sure to change the power supply changeover connector CN41 to CN40 on the LM-AP.

2-3-5. Power supply to expansion controller

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary.

The expansion controller supplies power through TB3, which equals 6 indoor units. (refer to Table 2-3-2)

2-3-6. Power supply to BM ADAPTER

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when only BM ADAPTER is connected.

Yet, make sure to move the power jumper from CN41 to CN40 on the BM ADAPTER.

2-3-7. Power supply to AE-200E/AE-50E/EW-50E

1-phase 100-240VAC power supply is needed.

The power supply unit PAC-SC51KUA is not necessary when connecting only the AE-200E/AE-50E/EW-50E.

2-4. Address setting

2-4-1. Switch operation

In order to constitute CITY MULTI in a complete system, switch operation for setting the unit address No. and connection No. is required.

- ① Address No. of outdoor unit, indoor unit and remote controller.
The address No. is set at the address setting board.
In the case of R2 system, it is necessary to set the same No. at the branch No. switch of indoor unit as that of the BC controller connected. (When connecting two or more branches, use the lowest branch No.)

② Caution for switch operations

- Be sure to shut off power source before switch setting. If operated with power source on, switch can not operate properly.
- No units with identical unit address shall exist in one whole air conditioner system. If set erroneously, the system can not operate.

③ MA remote controller

- When connecting only one remote controller to one group, it is always the main remote controller.
When connecting two remote controllers to one group, set one remote controller as the main remote controller and the other as the sub remote controller.
- The factory setting is "Main".

PAR-31MAA(E)

The MA remote controller does not have the switches listed above.
Refer to the installation manual for the function setting.

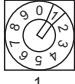

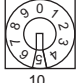

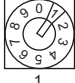

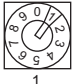

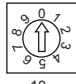

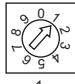

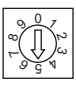

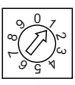

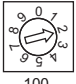

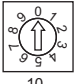

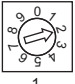

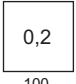

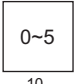

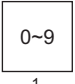

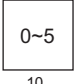

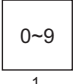

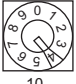

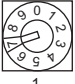

PAC-YT52CRA

Setting the dip switches

There are switches on the back of the top case. Remote controller Main/Sub and other function settings are performed using these switches. Ordinarily, only change the Main/Sub setting of SW1.
(The factory settings are ON for SW1, 2, and 3 and OFF for SW4.)

SW No.	SW contents Main	ON	OFF	Comment
1	Remote controller Main/Sub setting	Main	Sub	Set one of the two remote controllers at one group to "ON".
2	Temperature display units setting	Celsius	Fahrenheit	When the temperature is displayed in [Fahrenheit], set to "OFF".
3	Cooling/heating display in AUTO mode	Yes	No	When you do not want to display "Cooling" and "Heating" in the AUTO mode, set to "OFF".
4	Indoor temperature display	Yes	No	When you want to display the indoor temperature, set to "ON".

2-4-2. Rule of setting address

Unit	Address setting	Example	Note	
Indoor unit	01 ~ 50	 	Use the most recent address within the same group of indoor units. Make the indoor units address connected to the BC controller (Sub) larger than the indoor units address connected to the BC controller (Main). If applicable, set the sub BC controllers in an PURY system in the following order: (1) Indoor unit to be connected to the BC controller (Main) (2) Indoor unit to be connected to the BC controller (No.1 Sub) (3) Indoor unit to be connected to the BC controller (No.2 Sub) Set the address so that (1)<(2)<(3)	
Outdoor unit	51 ~ 99, 100 (Note1)	 	The smallest address of indoor unit in same refrigerant system + 50 Assign sequential address numbers to the outdoor units in one refrigerant circuit system. OC, OS1 and OS2 are automatically detected. (Note 2) * Please reset one of them to an address between 51 and 99 when two addresses overlap. * The address automatically becomes "100" if it is set as "01~ 50"	
BC controller (Main)	52 ~ 99, 100	 	The address of outdoor unit + 1 * Please reset one of them to an address between 51 and 99 when two addresses overlap. * The address automatically becomes "100" if it is set as "01~ 50"	
BC controller (Sub)	52 ~ 99, 100	 	Lowest address within the indoor units connected to the BC controller (Sub) plus 50.	
Local remote controller	ME Remote controller (Main)	101 ~ 150	1 Fixed  	The smallest address of indoor unit in the group + 100 * The place of "100" is fixed to "1"
	ME Remote controller (Sub)	151 ~ 199, 200	1 Fixed  	The address of main remote controller + 50 * The address automatically becomes "200" if it is set as "00"
System controller	ON/OFF remote controller	000, 201 ~ 250	  	The smallest group No. to be managed + 200 * The smallest group No. to be managed is changeable.
	AE-200E/AE-50E AG-150A AT-50B EB-50GU-J EW-50E	000, 201 ~ 250	  	
	PAC-YG50ECA	000, 201 ~ 250	  	* Settings are made on the initial screen of AG-150A.
	BAC-HD150	000, 201 ~ 250	  	* Settings are made with setting tool of BM ADAPTER.
	LMAP04-E	201 ~ 250	2 Fixed  	

Note1: To set the address to "100", set it to "50"

Note2: Outdoor units OC, OS1 and OS2 in one refrigerant circuit system are automatically detected.

OC, OS1 and OS2 are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.

2-4-3. System examples

Factory setting

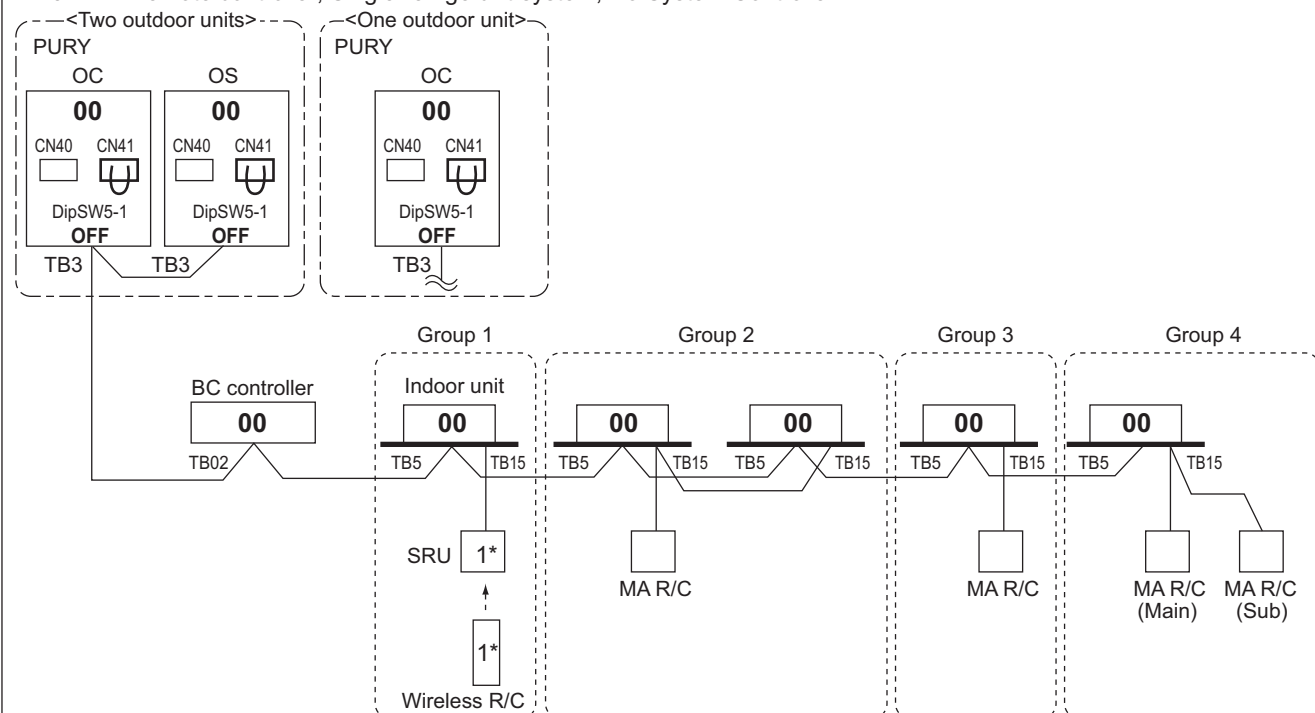

Original switch setting of the outdoors, indoors, controllers, LM-AP and BM ADAPTER at shipment is as follows.

- Outdoor unit : Address: 00, CN41: ON (Jumper), DipSW5-1: OFF
- Indoor unit : Address: 00
- BC controller : Address: 00
- ME remote controller : Address: 101
- LM-AP : Address: 247, CN41: ON (Jumper), DipSW1-2: OFF
- BM ADAPTER : Address: 000, CN41: ON (Jumper)
- AE-200E/AE-50E/EW-50E : Address: 000, CN21: ON (Jumper)

Setting at the site

- DipSW5-1(Outdoor) : When the System Controller is used, all the Dip SW5-1 at the outdoor units should be set to "ON". * Dip SW5-1 remains OFF when only LM-AP is used.
- DipSW4-6(BC controller) : Set DipSW 4-6 to ON at BC controller, in case of connected Indoor unit sized P100-P140 with 2 ports. It is also possible to connect Indoor unit sized P100-P140 with 1 port (set DipSW 4-6 to OFF).
- DipSW1-2(LM-AP) : When the LM-AP is used together with System Controller, DipSW1-2 at the LM-AP should be set to "ON".
- CN40/CN41 : Change jumper from CN41 to CN 40 at outdoor control board will activate central transmission power supply to TB7;
(Change jumper at only one outdoor unit when activating the transmission power supply without using a power supply unit.)
Change jumper from CN41 to CN 40 at LM-AP/BM ADAPTER will activate transmission power supply to LM-AP/BM ADAPTER itself;
Power supply unit is recommended to use for a system having more than 1 outdoor unit, because the central transmission power supply from TB7 of one of outdoor units is risking that the outdoor unit failure may let down the whole system controller system.
- CN21(AE-200E/AE-50E/EW-50E) : Activates the power supply to M-NET transmission line from AE-200E/AE-50E/EW-50E (CN21: ON (power supplied), OFF (power not supplied))

2-4-3-1. MA remote controller, Single-refrigerant-system, No System Controller

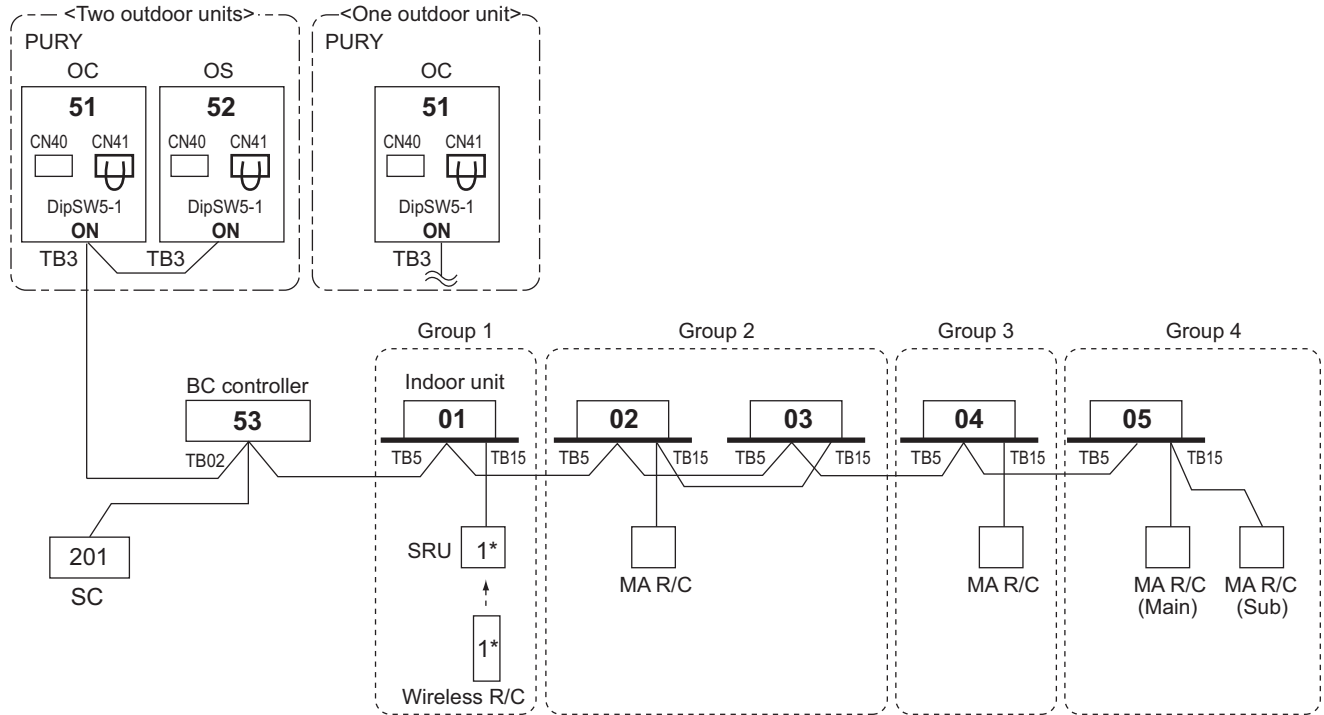

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected. OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. No address setting is needed.
3. For a system having more than 32 indoor unit (P15-P140), confirm the need of Booster at 2-3 "System configuration restrictions".
4. Indoor units should be set with a branch number.
5. Address setting is required if a sub BC controller is connected.
6. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-2. MA remote controller, Single-refrigerant-system, System Controller

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*SC can be connected to TB3 side or TB7 side;

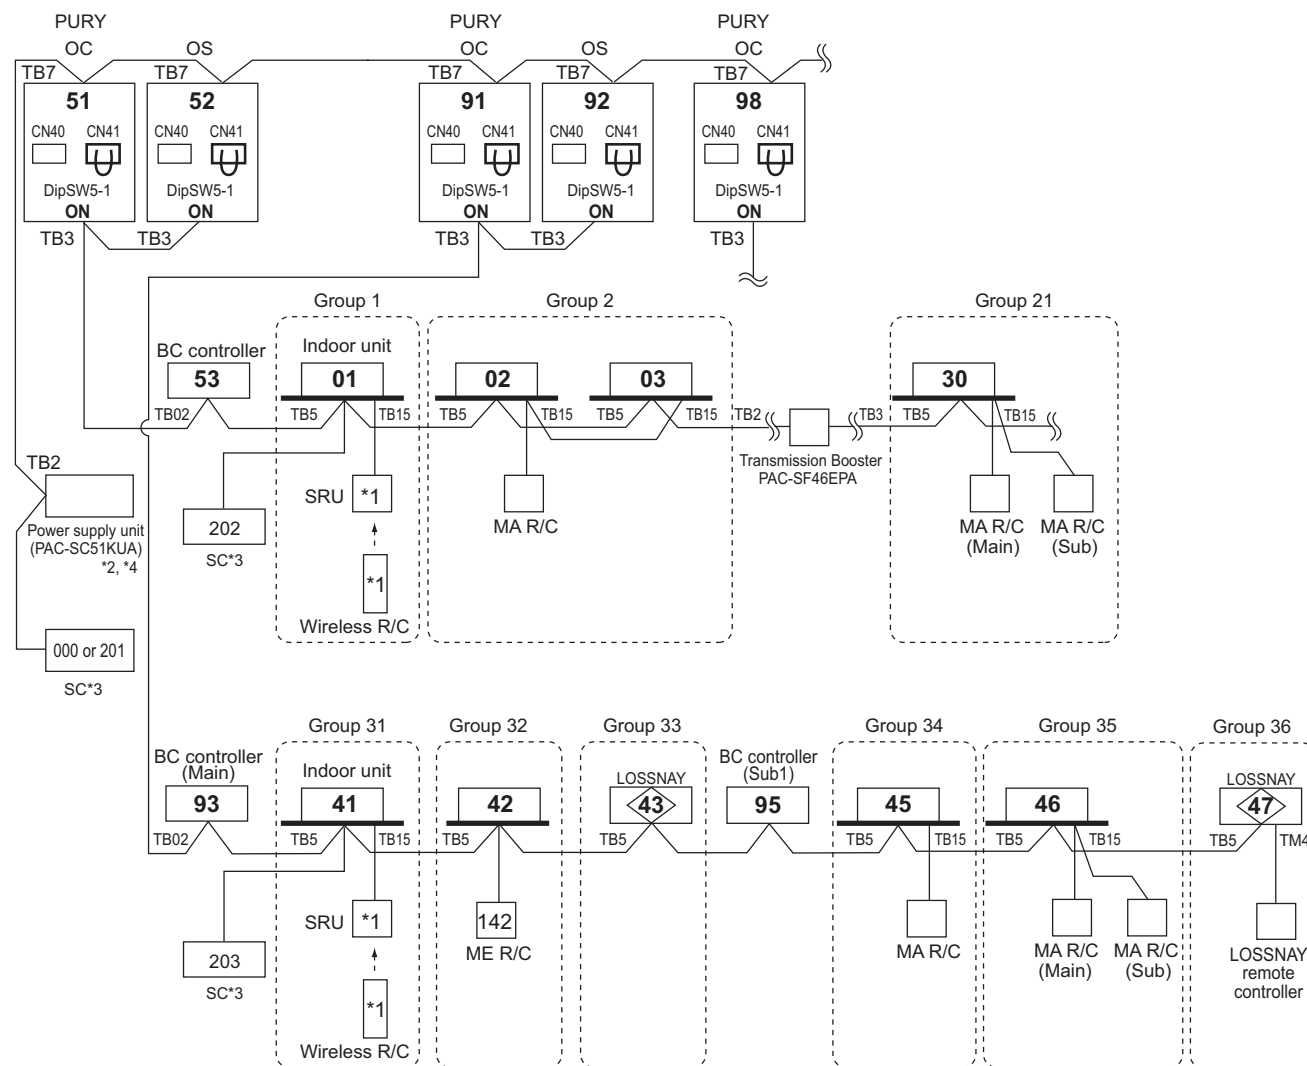

Should SC connected to TB7 side, change Jumper from CN41 to CN40 at the Outdoor unit module so as to supply power to the SC.

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected. OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units and centralized controller.
3. For a system having more than 32 indoor unit (P15-P140), confirm the need of Booster at 2-3 "System configuration restrictions".
4. Indoor units should be set with a branch number.
5. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

S.D. R2

2-4-3-3. MA remote controller, Multi-refrigerant-system, System Controller at TB7/TB3 side, Booster for long M-NET wiring

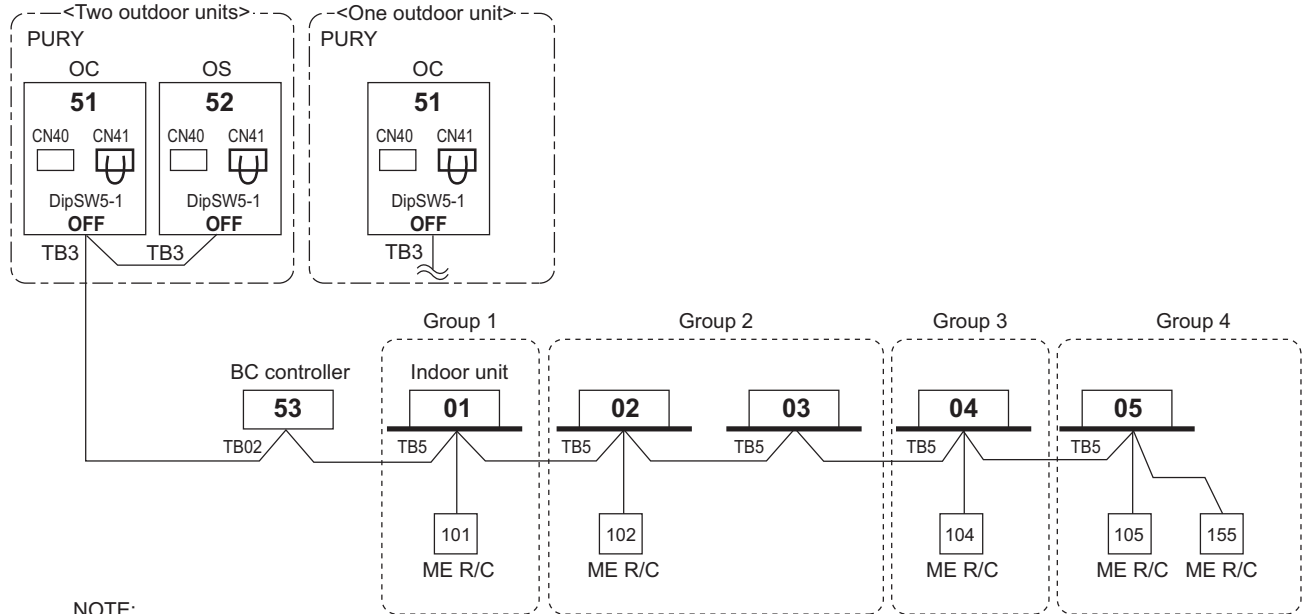

- *1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.
- *2 System controller should connect to TB7 at Outdoor and use power supply unit together in Multi-Refrigerant-System.
For AG-150A, 24VDC should be used with the PAC-SC51KUA.
For AE-200E, AE-50E, and EW-50E the power supply unit PAC-SC51KUA is unused.
- *3 When multiple system controllers are connected in the system, set the controller with more functions than others as a "main" controller and others as "sub".
AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP are for exclusive use as a "main" system controller and cannot be used as a "sub" system controller.
Make the setting to only one of the system controllers for "prohibition of operation from local remote controller".
- *4 The power supply unit is not necessary for AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP.

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected.
OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units, LOSSNAY and system controller.
3. M-NET power is supplied by the Outdoor unit at TB3, while Indoor unit and ME remote controller consume the M-NET power for transmission use. The power balance is needed to consider for long M-NET wiring. Details refer to 2-3 "System configuration restrictions".
4. Indoor units should be set with a branch number.
5. Assign an address to each of the sub BC controllers which equals the sum of the smallest address of the indoor units that are connected to each sub BC controller and 50.
6. When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

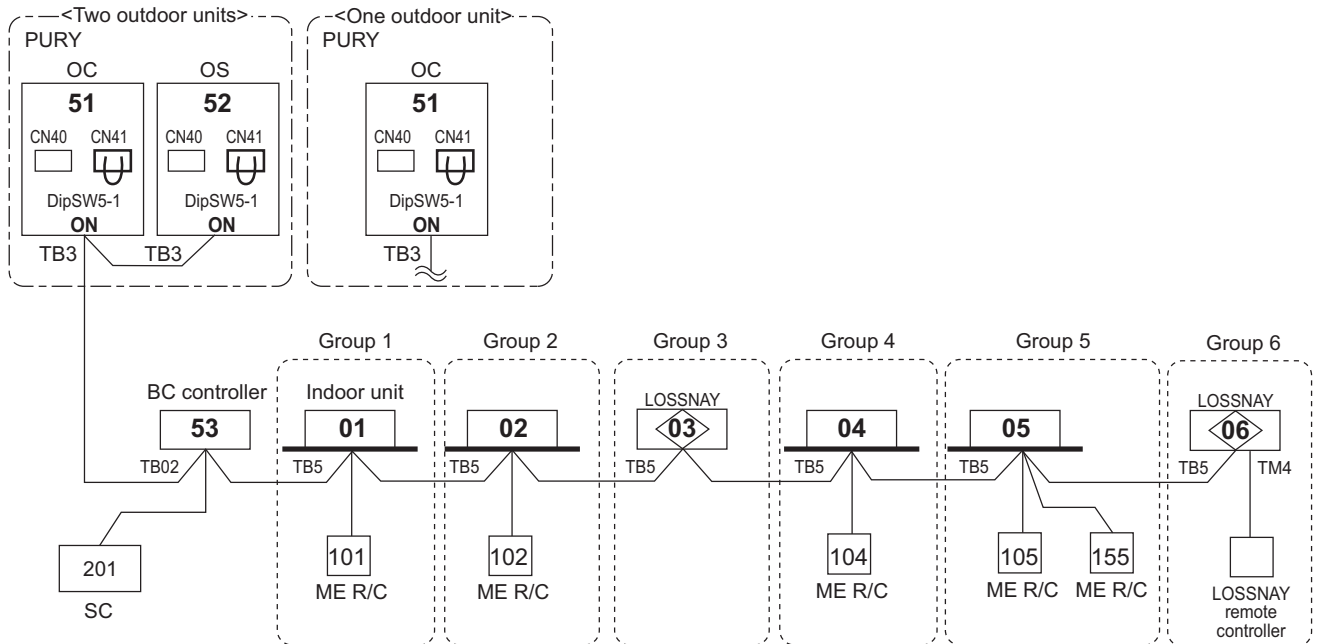

2-4-3-4. ME remote controller, Single-refrigerant-system, No system controller

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected. OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units, system controller and ME remote controllers.
3. M-NET power is supplied by the Outdoor unit at TB3, while Indoor unit and ME RC consume the M-NET power for transmission use. The power balance is needed to consider for long M-NET wiring. Details refer to 2-3 "System configuration restrictions".
4. Indoor units should be set with a branch number.

2-4-3-5. ME remote controller, Single-refrigerant-system, System controller, LOSSNAY

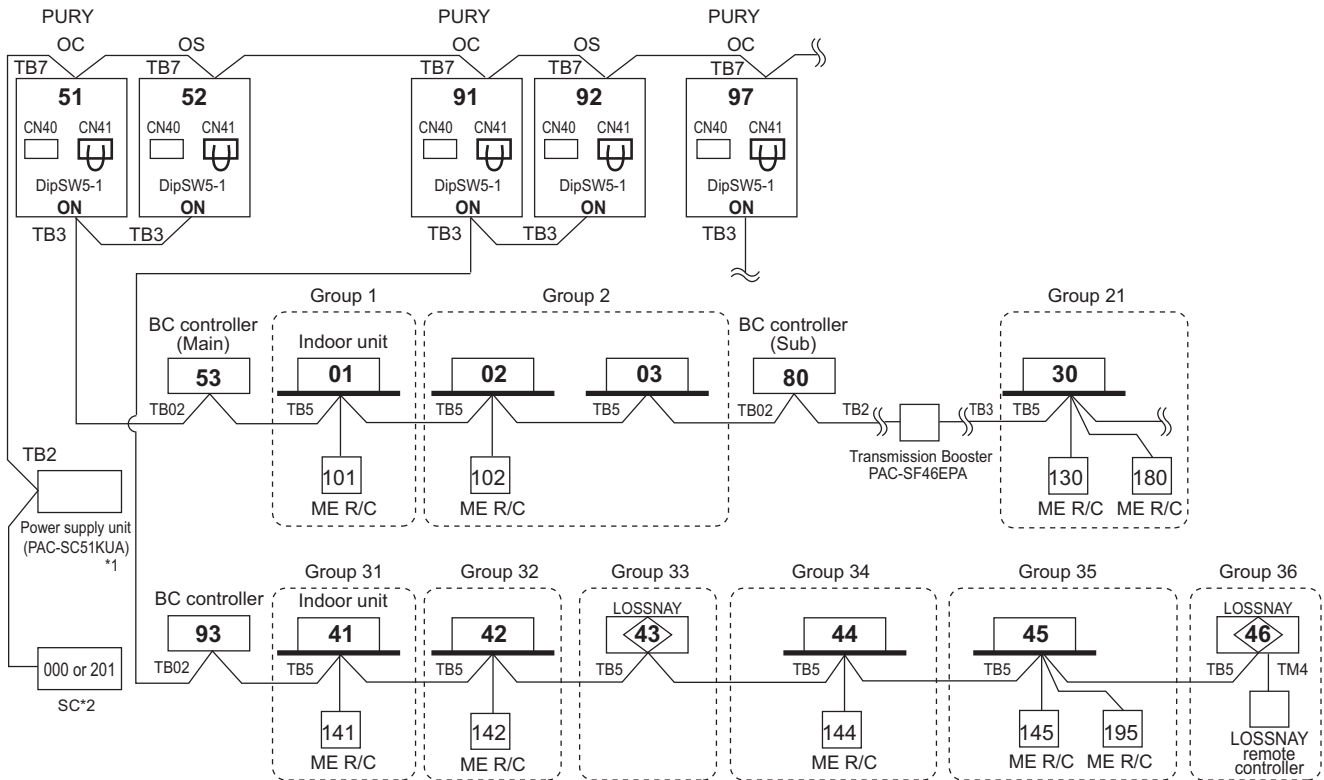

*SC can be connected to TB3 side or TB7 side;

Should SC connected to TB7 side, change Jumper from CN41 to CN40 at the Outdoor unit module so as to supply power to the SC.

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected. OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. Address should be set to Indoor units, LOSSNAY, centralized controller, and ME remote controllers.
3. For a system having more than 32 indoor unit (P15-P140), confirm the need of Booster at 2-3 "System configuration restrictions".
4. Indoor units should be set with a branch number.

2-4-3-6. ME remote controller, Multi-refrigerant-system, System Controller at TB7 side, LOSSNAY, Booster for long M-NET wiring

- *1 System controller should connect to TB7 at Outdoor and use power supply unit together in Multi-Refrigerant-System. For AG-150A, 24VDC should be used with the PAC-SC51KUA. For AE-200E, AE-50E, and EW-50E the power supply unit PAC-SC51KUA is unused.
- *2 When multiple system controllers are connected in the system, set the controller with more functions than others as a "main" controller and others as "sub". AG-150A, AE-200E, AE-50E, EW-50E, BAC-HD150, and LM-AP are for exclusive use as a "main" system controller and cannot be used as a "sub" system controller. Make the setting to only one of the system controllers for "prohibition of operation from local remote controller".

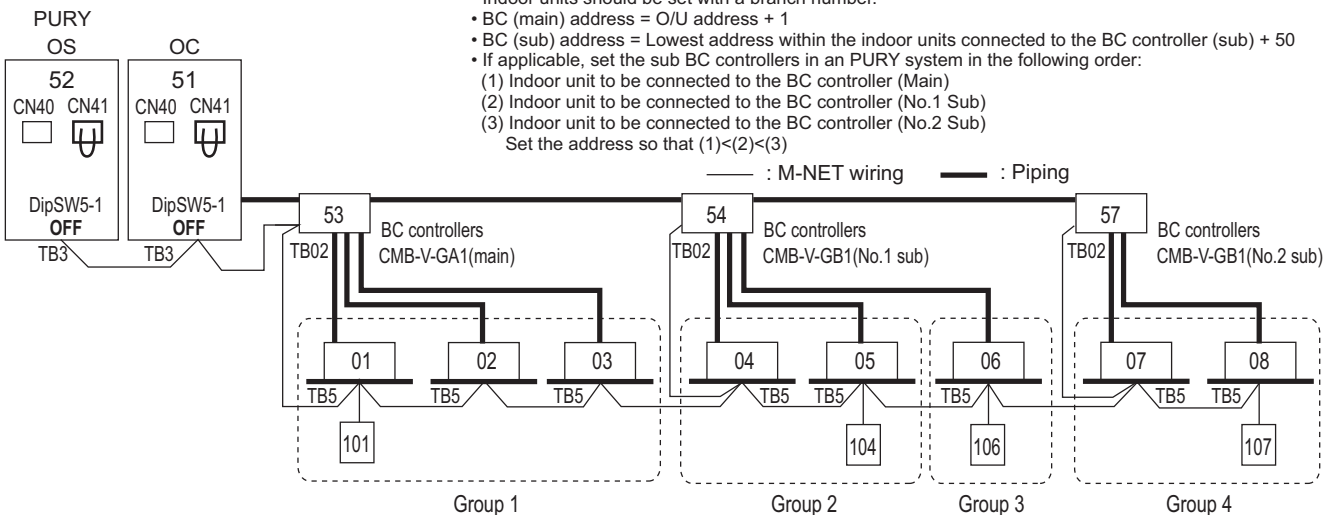

NOTE:

1. Outdoor units OC and OS in one refrigerant circuit system are automatically detected. OC and OS are ranked in descending order of capacity. If units are the same capacity, they are ranked in ascending order of their address.
2. M-NET power is supplied by the Outdoor unit at TB3, while Indoor unit and ME RC consume the M-NET power for transmission use. The power balance is needed to consider for long M-NET wiring. Details refer to 2-3 "System configuration restrictions".
3. Indoor units should be set with a branch number.
4. Assign an address to each of the sub BC controllers which equals the sum of the smallest address of the indoor units that are connected to each sub BC controller and 50. When the address assigned to sub BC controller overlaps those of any other units including outdoor units (OC/OS) or main BC controller, sub BC controller will be given priority to have the address.

2-4-3-7. Example : BC, BC sub

NOTE

- Indoor units should be set with a branch number.
- BC (main) address = O/U address + 1
- BC (sub) address = Lowest address within the indoor units connected to the BC controller (sub) + 50
- If applicable, set the sub BC controllers in an PURY system in the following order:
 - (1) Indoor unit to be connected to the BC controller (Main)
 - (2) Indoor unit to be connected to the BC controller (No.1 Sub)
 - (3) Indoor unit to be connected to the BC controller (No.2 Sub)
 Set the address so that (1)<(2)<(3)

2-4-3-8. ME remote controller, Multi-refrigerant-system, No Power supply unit

NOTE

- It is necessary to change the connector to CN40 on the outdoor unit control board (only one outdoor unit) when the group is set between other refrigerant systems.
- It is necessary to set on the remote controller by manual when group sets on the different refrigerant system. Please refer to remote controller installation manual.

2-4-3-9. ME remote controller, Multi-refrigerant-system, System Controller at TB7 side, No Power supply unit

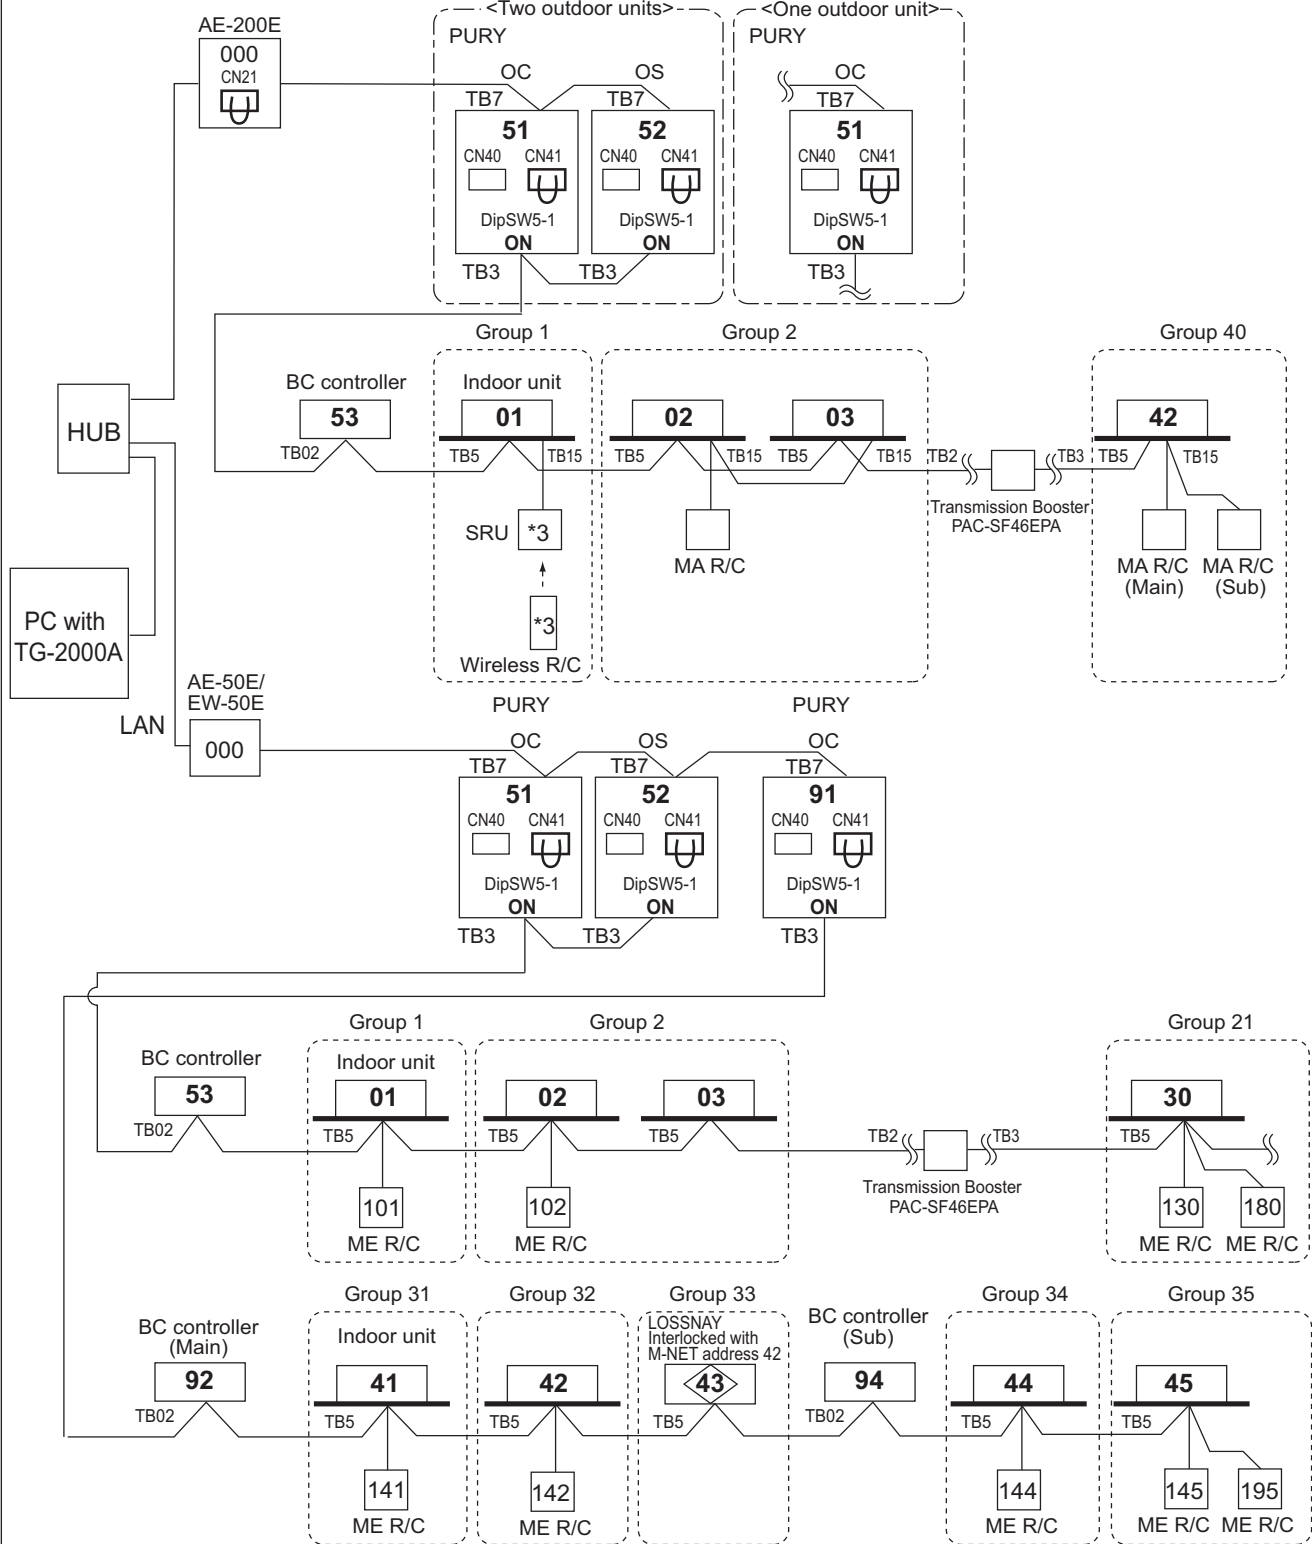

NOTE

- It is necessary to change the connector to CN40 on the outdoor unit control board (only one outdoor unit) when the group is set between other refrigerant systems.
- It is necessary to set on the remote controller by manual when group sets on the different refrigerant system. Please refer to remote controller installation manual.

2-4-3-10. TG-2000A(*1)+AE-200E/AE-50E/EW-50E

AE-200E can control max. 50 indoor units;
 GB-50ADA-J can control max. 50 indoor units;
 TG-2000A can control max. 40 of AE-200E/AE-50E/EW-50E;*2
 TG-2000A can control max. 2000 indoor units.

*1 TG-2000A (Ver.6.5 or later) supports AE-200E/AE-50E (Ver.7.10 or later).

Contact your local distributor for which version of TG-2000A supports EW-50E.

*2 When AE-200E connected with AE-50E is connected, the number of AE-50E will be the maximum controllable number.

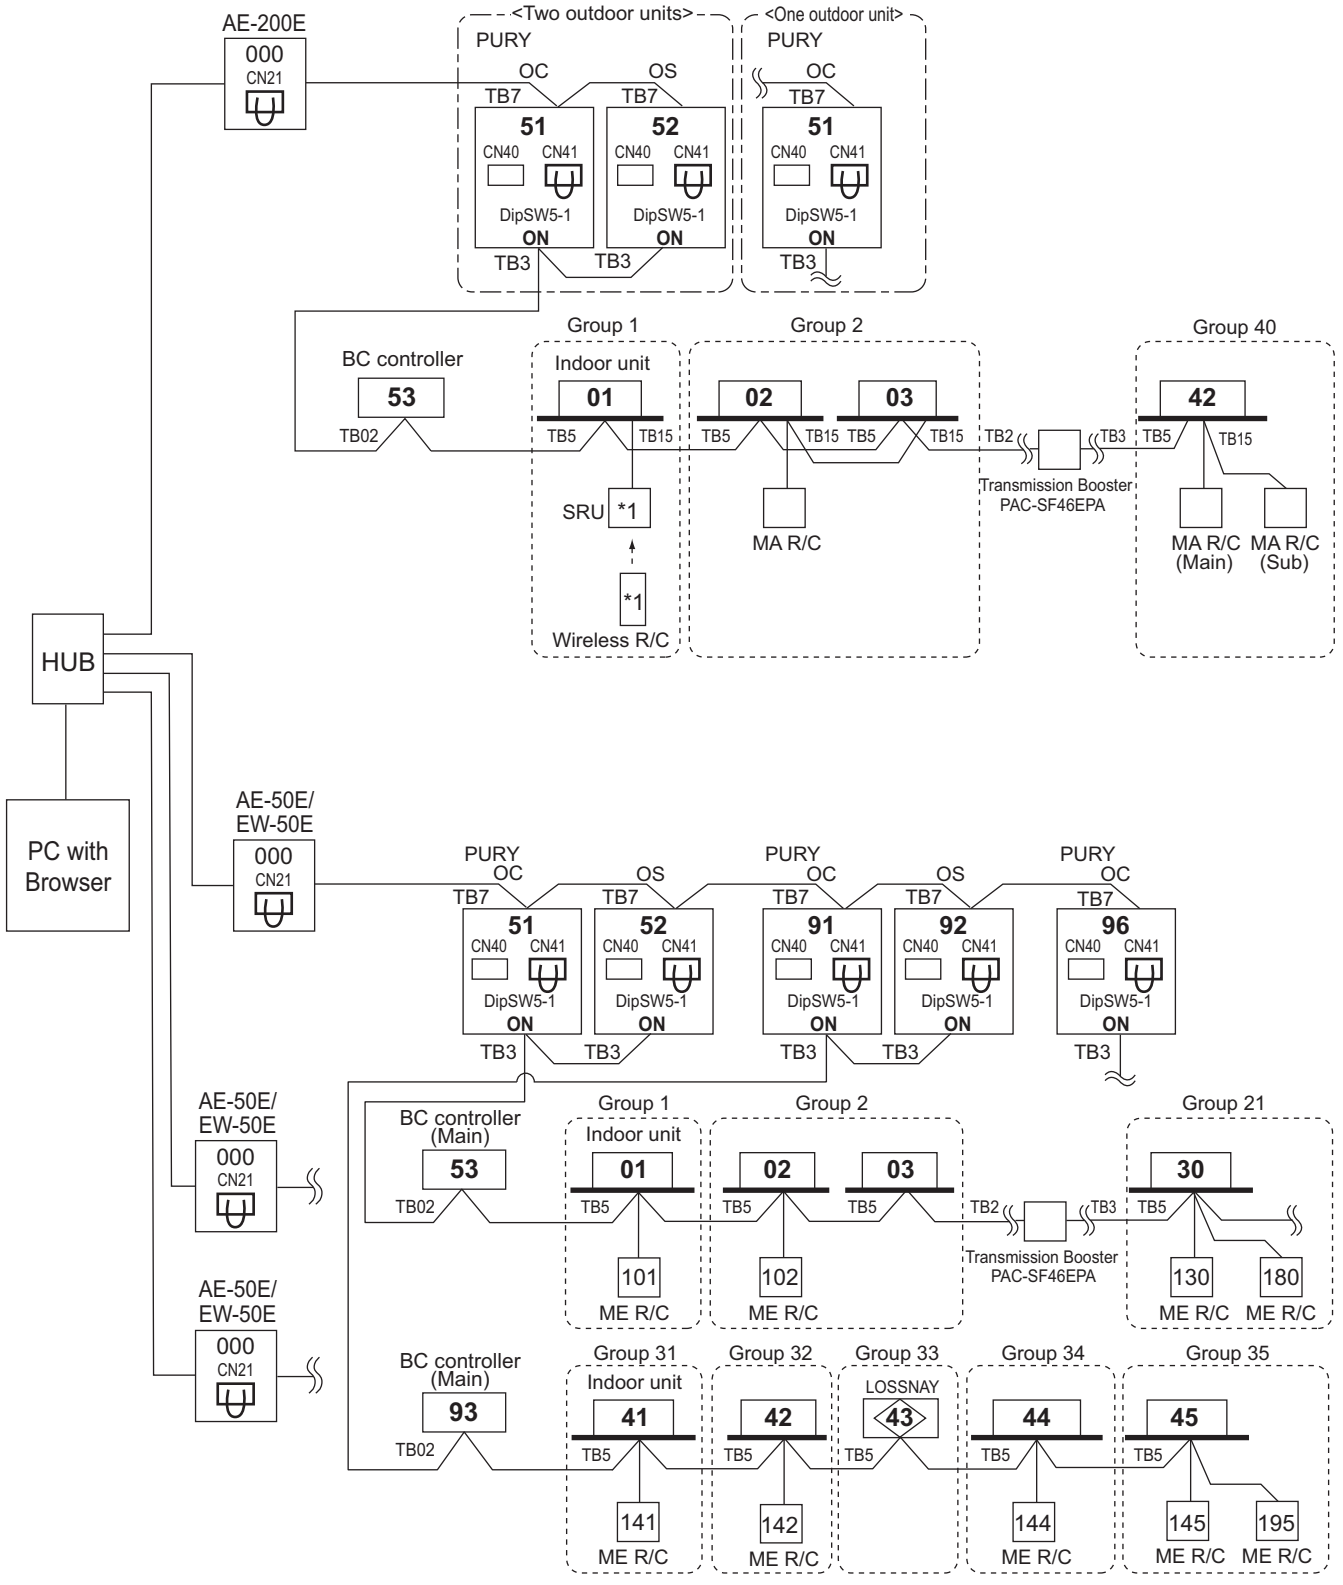

TG-2000A can control up to 40 AE-200E/AE-50E or AE-200E without AE-50E connection.

*3 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*4 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-11. AE-200E+AE-50E/EW-50E

AE-200E can control max. 200 indoor units/via AE-50E/EW-50E.

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-12. LM-AP

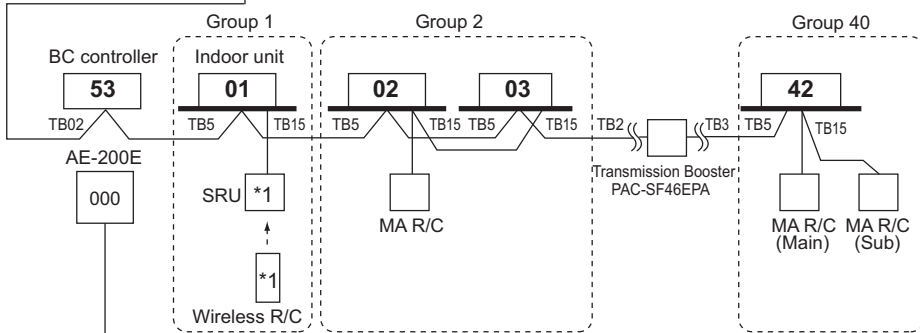

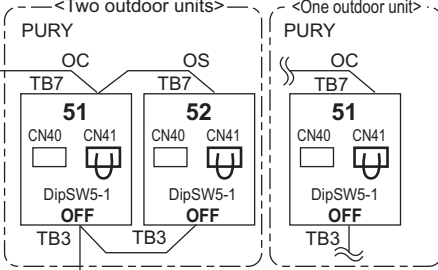

LM-AP can transmit for max. 50 indoor units;

If system controller (SC) is used, DipSW1-2 at LM-AP and DipSW5-1 at Outdoor unit should set to "ON".

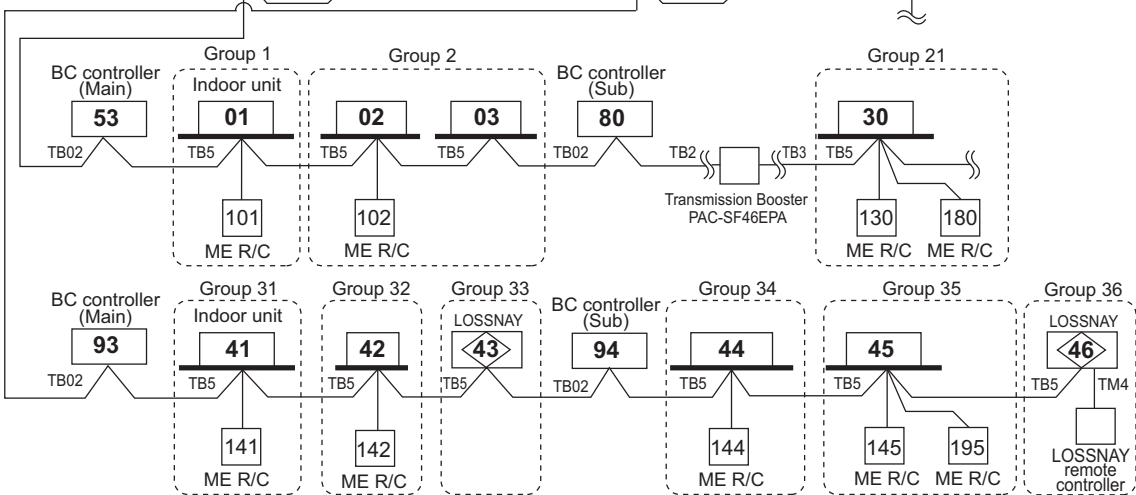

Change Jumper from CN41 to CN40 to activate power supply to LM-AP itself for those LM-AP connected without system controller (SC).

LM-AP can transmit for max. 50 indoor units in single-refrigerant-system or multi-refrigerant-system.

LM-AP(01)
identified by Neuron ID

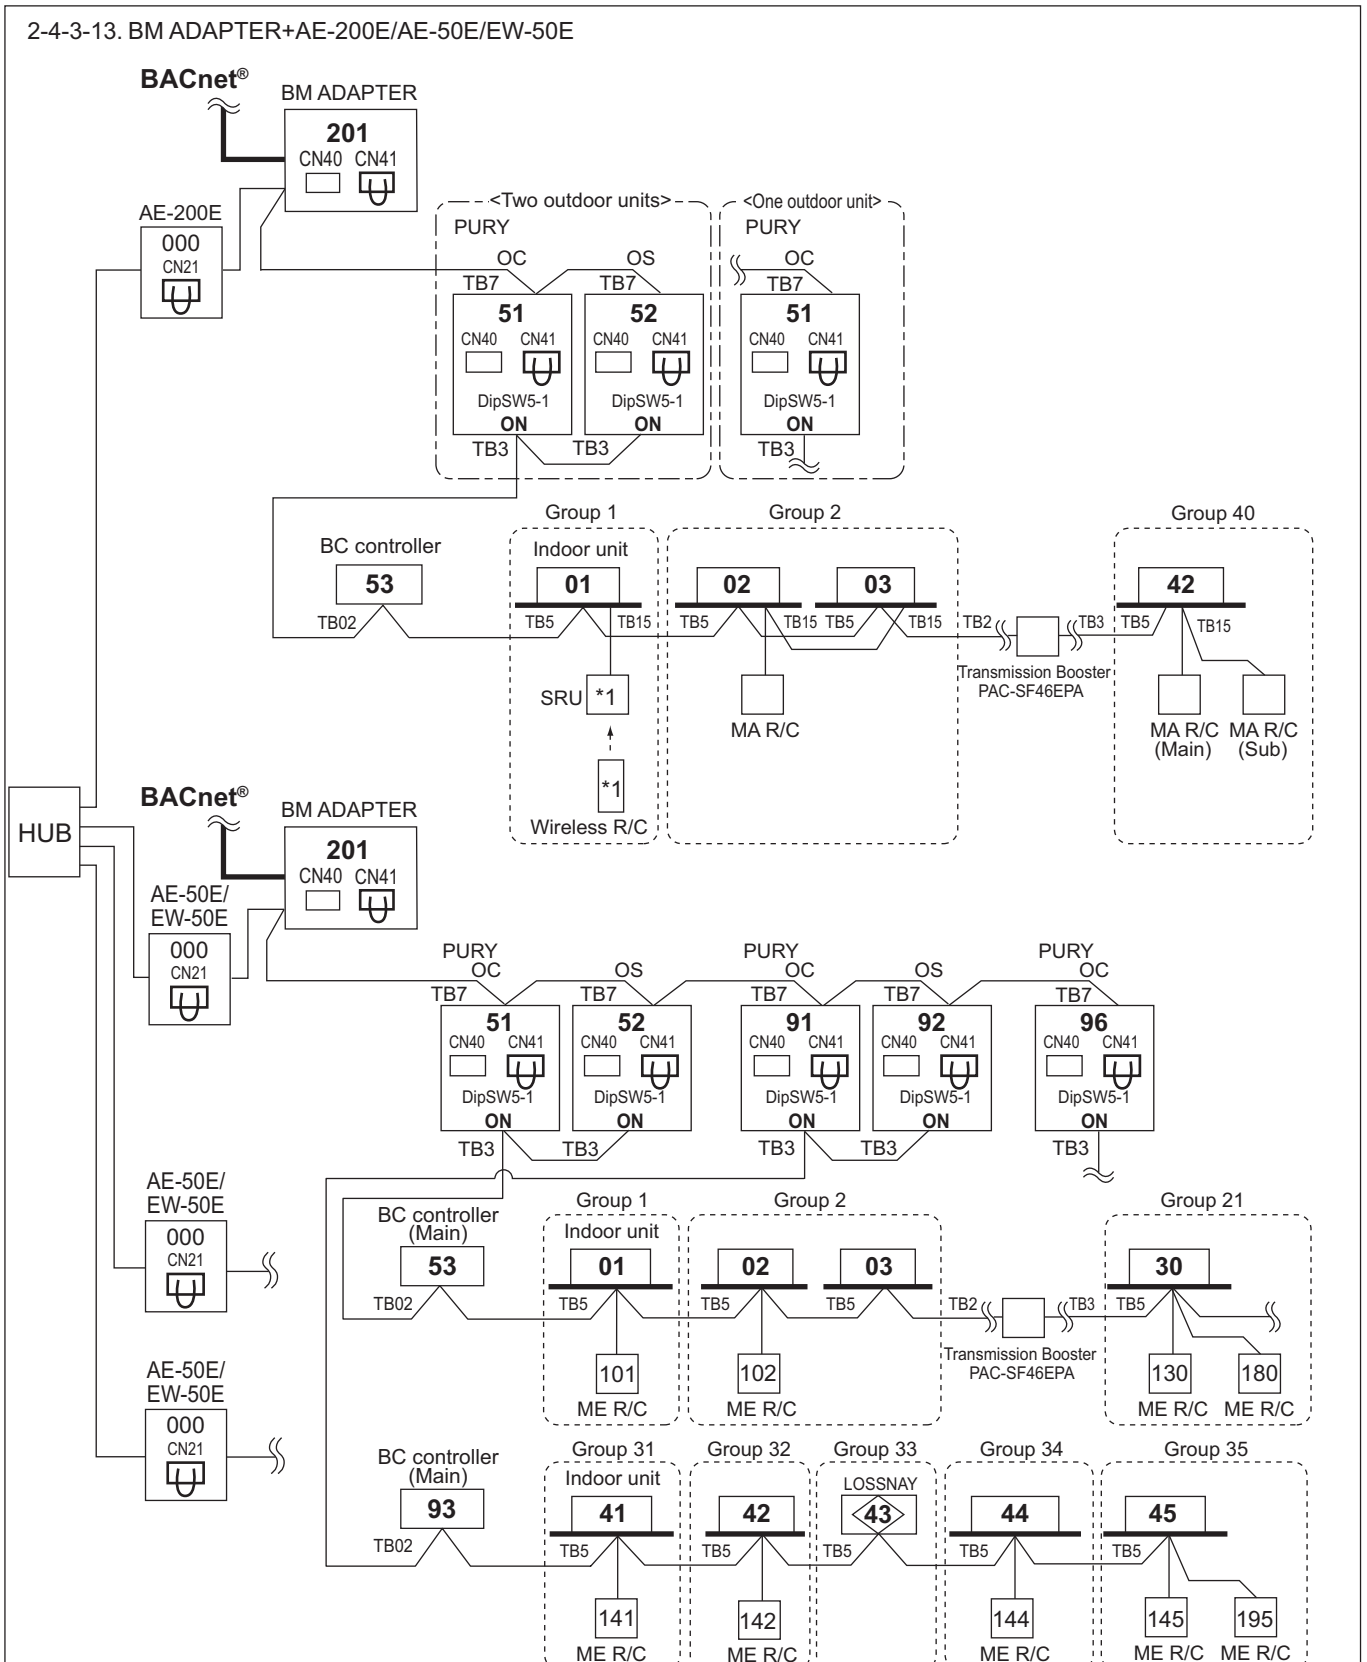

LM-AP(02)
identified by Neuron ID

For other equipments (Lighting, security, elevator etc.)

- *1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.
- *2 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

2-4-3-13. BM ADAPTER+AE-200E/AE-50E/EW-50E

NOTE

• It is not necessary to connect the M-NET transmission line to the TB3 on BM ADAPTER. Leave the power jumper of BM ADAPTER connected to CN41.

*1 For Wireless R/C and Signal receiver unit (SRU), channel 1, 2 and 3 are selectable and should be set to same channel.

*2 Consult your dealer for restrictions when connecting both AE-200E/AE-50E/EW-50E and BM ADAPTER.

*3 When a PAR-31MAA(E) is connected to a group, no other MA remote controllers can be connected to the same group.

*4 In a system that uses AE-200E and/or AE-50E/EW-50E, each BM-ADAPTER must be connected to the M-NET line.

3-1. R410A Piping material

Refrigerant pipe for CITY MULTI shall be made of phosphorus deoxidized copper, and has two types.

A. Type-O : Soft copper pipe (annealed copper pipe), can be easily bent with human's hand.

B. Type-1/2H pipe : Hard copper pipe (Straight pipe), being stronger than Type-O pipe of the same radical thickness.

The maximum operation pressure of R410A air conditioner is 4.30 MPa [623psi]. The refrigerant piping should ensure the safety under the maximum operation pressure. MITSUBISHI ELECTRIC recommends pipe size as Table 3-1, or You shall follow the local industrial standard. Pipes of radical thickness 0.7mm or less shall not be used.

Table 3-1. Copper pipe size and radial thickness for R410A CITY MULTI.

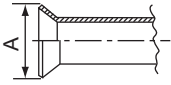

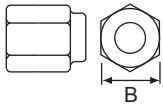

Size (mm)	Size (inch)	Radial thickness (mm)	Radial thickness (mil)	Pipe type
ø6.35	ø1/4"	0.8	[32]	Type-O
ø9.52	ø3/8"	0.8	[32]	Type-O
ø12.7	ø1/2"	0.8	[32]	Type-O
ø15.88	ø5/8"	1.0	[40]	Type-O

* For pipe sized ø19.05 (3/4") for R410A air conditioner, choice of pipe type is up to you.

* The figures in the radial thickness column are based on the Japanese standards and provided only as a reference. Use pipes that meet the local standards.

Flare

Due to the relative higher operation pressure of R410A compared to R22, the flare connection should follow dimensions mentioned below so as to achieve enough the air-tightness.

Flare pipe	Pipe size	A (For R410A)	(mm[in.])	Flare nut	Pipe size	B (For R410A)	(mm[in.])
	ø6.35 [1/4"]	9.1			ø6.35 [1/4"]	17.0	
	ø9.52 [3/8"]	13.2			ø9.52 [3/8"]	22.0	
	ø12.70 [1/2"]	16.6			ø12.70 [1/2"]	26.0	
	ø15.88 [5/8"]	19.7			ø15.88 [5/8"]	29.0	
	ø19.05 [3/4"]	24.0			ø19.05 [3/4"]	36.0	

3-2. Piping Design

3-2-1. IF 16 ports or less are in use, i.e., if only one BC controller is in use with no sub BC controller PURY-P-YLM-A1

- Note1. No Header usable on PURY system.
- Note2. Indoor unit sized P100-P250 should be connected to BC controller via Y shape joint CMY-R160-J1 ;
- Note3. Indoor unit sized P100-P250 does NOT share BC controller ports with other Indoor units ;
- Note4. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better ;
Piping length needs to consider the actual length and equivalent length which bents are counted.
Equivalent piping length (m)=Actual piping length+ "M" x Number of bent.
- Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P100-P250 with 2 ports.
- Note6. It is also possible to connect Indoor unit sized P100-P140 with 1 port (set DIP-SW 4-6 to OFF).
However, the cooling capacity decreases a little (For details, refer to the chapter OUTDOOR UNITS, R2 SERIES, 8-5. Correction by port counts of the BC controller).
- Note7. Individual indoor units grouped together to connect to the BC controller via one port cannot operate individually in heating and cooling modes at the same time. I.e., they must all function in either heating or cooling together.
- Note8. Indoor capacity is described as its model size. For example, PEFY-P63VML-E, its capacity is P63.
- Note9. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream.
For example, PEFY-P63VML-E + PEFY-P32VML-E : Total Indoor capacity = P63 + P32 = P95.
- Note10. To enable the continuous heating mode, set SW4 (848) to ON.

Table 3-2-4-4. Piping "B", "C", "D", "E" size selection rule (mm [in.])

Total down-stream Indoor capacity	Pipe(Liquid)	Pipe(Gas)
P140 or less	ø9.52 [3/8"]	ø15.88 [5/8"]
P141-P200	ø9.52 [3/8"]	ø19.05 [3/4"]
P201-P250	ø9.52 [3/8"]	ø22.20 [7/8"]

Table 3-2-4-6. Piping "a", "b", "c", "d", "e", "f", "g", "h", "j", "k" size selection rule (mm [in.])

Indoor Unit size	Pipe(Liquid)	Pipe(Gas)
P15 to P50, GUF-50RD(H)	ø6.35 [1/4"]	ø12.70 [1/2"]
P63 to P140, GUF-100RD(H)	ø9.52 [3/8"]	ø15.88 [5/8"]
P200	ø9.52 [3/8"]	ø19.05 [3/4"]
P250	ø9.52 [3/8"]	ø22.20 [7/8"]

3-2-5. IF more than 16 ports are in use, or if there is more than one BC controller in use for two outdoor units
PURY-P-YSLM-A1

- Note1. No Header usable on PURY system.
- Note2. Indoor unit sized P100-P250 should be connected to BC controller via Y shape joint CMY-R160-J1 ;
- Note3. Indoor unit sized P100-P250 does NOT share BC controller ports with other Indoor units ;
- Note4. As bends cause pressure loss on transportation of refrigerant, fewer bends design is better ;
 Piping length needs to consider the actual length and equivalent length which bends are counted.
 Equivalent piping length (m)=Actual piping length**M* * Number of bent.
- Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P100-P250 with 2 ports.
- Note6. It is also possible to connect Indoor unit sized P100-P140 with 1 port (set DIP-SW 4-6 to OFF).
 However, the cooling capacity decreases a little (For details, refer to the chapter OUTDOOR UNITS, R2 SERIES, 8-5. Correction by port counts of the BC controller).
- Note7. Individual indoor units grouped together to connect to the BC controller via one port cannot operate individually in heating and cooling modes at the same time. I.e., they must all function in either heating or cooling together.
- Note8. For sub BC controller CMB-P-V-GB1 the connectable indoor unit capacities may sum to equal that of a P350 unit or less. However, if two sub controllers are used the TOTAL sum of connectable units connected to BOTH sub controllers must also not exceed that of a P350 unit.
 For sub BC controller CMB-P1016V-HB1 the connectable indoor unit capacities may sum to equal that of a P350 unit or less. However, if two sub controllers are used the TOTAL sum of connectable units connected to BOTH sub controllers must also not exceed that of a P450 unit.
- Note9. Indoor capacity is described as its model size. For example, PEFY-P63VML-E, its capacity is P63.
- Note10. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream.
 For example, PEFY-P63VML-E + PEFY-P32VML-E : Total Indoor capacity = P63 + P32 = P95.
- Note11. To enable the continuous heating mode, set SW4 (848) to ON.

3-3. Refrigerant charging calculation

PURY-P-YLM-A1

Sample connection (with 3 BC controller and 6 indoor units) (PURY-P700YSLM-A1)

■ Amount of additional refrigerant to be charged

Refrigerant for extended pipes (field piping) is not factory-charged to the outdoor unit. Add an appropriate amount of refrigerant for each pipes on site. Record the size of each high pressure pipe and liquid pipe, and the amount of refrigerant that was charged on the outdoor unit for future reference.

■ Calculating the amount of additional refrigerant to be charged

The amount of refrigerant to be charged is calculated with the size of the on-site-installed high pressure pipes and liquid pipes, and their length. Calculate the amount of refrigerant to be charged according to the formula below. Round up the calculation result to the nearest 0.1kg. (i.e., 16.03 kg = 16.1 kg)

<Amount of additional refrigerant to be charged>

■ Calculating the amount of additional refrigerant to be charged

Units "m" and "kg" (In an R2 system)

<Formula>

• When the piping length from the outdoor unit to the farthest indoor unit is 30.5 m (100 ft) or shorter

Amount of additional charge (kg)	=	High-pressure pipe ø28.58 total length × 0.36 (kg/m)	+	High-pressure pipe ø22.2 total length × 0.23 (kg/m)	+	High-pressure pipe ø19.05 total length × 0.16 (kg/m)	+	High-pressure pipe ø15.88 total length × 0.11 (kg/m)	+	Liquid pipe ø15.88 total length × 0.2 (kg/m)
	+	Liquid pipe ø12.7 total length × 0.12 (kg/m)	+	Liquid pipe ø9.52 total length × 0.06 (kg/m)	+	Liquid pipe ø6.35 total length × 0.024 (kg/m)				

Total capacity of outdoor units	Amount (to be added for standard or main BC controller)	+	Main BC controller	Amount
P200	3.0kg		HA-type	2.0kg
P250	4.5kg			
P300	4.5kg			
P350-900	6.0kg			

Number of sub BC controllers	Amount (to be added for sub BC controller)	+	Total capacity of connected indoor units	Amount (to be added for indoor unit)
1	1.0kg		80 or below	2.0kg
2	2.0kg		81 to 160	2.5kg
			161 to 330	3.0kg
			331 to 390	3.5kg
			391 to 480	4.5kg
			481 to 630	5.0kg
			631 to 710	6.0kg
			711 to 800	8.0kg
			801 to 890	9.0kg
			891 to 1070	10.0kg
			1071 to 1250	12.0kg
			1251 or above	14.0kg

Outdoor unit model	Amount (to be added for outdoor unit)
Single	P200 to P250YLM-A1: 0kg
	P300 to P400YLM-A1: 0kg
	P450 to P500YLM-A1: 5.5kg
Combination	P400 to P550YSLM-A1: 0kg
	P600 to P800YSLM-A1: 0kg
	P850YSLM-A1: 5.5kg
	P900YSLM-A1: 11.0kg

• When the piping length from the outdoor unit to the farthest indoor unit is longer than 30.5 m (100 ft)

PURY-EP-YLM-A1

Sample connection (with 3 BC controller and 6 indoor units) (PURY-EP700YSLM-A1)

Amount of additional refrigerant to be charged

Refrigerant for extended pipes (field piping) is not factory-charged to the outdoor unit. Add an appropriate amount of refrigerant for each pipes on site. Record the size of each high pressure pipe and liquid pipe, and the amount of refrigerant that was charged on the outdoor unit for future reference.

Calculating the amount of additional refrigerant to be charged

The amount of refrigerant to be charged is calculated with the size of the on-site-installed high pressure pipes and liquid pipes, and their length. Calculate the amount of refrigerant to be charged according to the formula below. Round up the calculation result to the nearest 0.1kg. (i.e., 16.03 kg = 16.1 kg)

<Amount of additional refrigerant to be charged>

Calculating the amount of additional refrigerant to be charged

Units "m" and "kg" (In an R2 system)

<Formula>

• When the piping length from the outdoor unit to the farthest indoor unit is 30.5 m (100 ft) or shorter

Amount of additional charge (kg)	=	High-pressure pipe ø28.58 total length × 0.36 (kg/m)	+	High-pressure pipe ø22.2 total length × 0.23 (kg/m)	+	High-pressure pipe ø19.05 total length × 0.16 (kg/m)	+	High-pressure pipe ø15.88 total length × 0.11 (kg/m)	+	Liquid pipe ø15.88 total length × 0.2 (kg/m)
		Liquid pipe ø12.7 total length × 0.12 (kg/m)	+	Liquid pipe ø9.52 total length × 0.06 (kg/m)	+	Liquid pipe ø6.35 total length × 0.024 (kg/m)

■ Amount of factory charged refrigerant

■ Sample calculation

Outdoor unit Model	Charged amount
EP200 EP250	6.0 kg
EP300 EP350	8.0 kg
EP400	10.5 kg
EP450 EP500	11.8 kg

Indoor 1: 50 A: ø28.58 40m a: ø6.35 10m
 2: 250 B: ø9.52 10m b: ø9.52 5m
 3: 15 C: ø12.70 20m c: ø6.35 5m
 4: 20 D: ø9.52 5m d: ø6.35 10m
 5: 140 E: ø9.52 5m e: ø9.52 5m
 6: 200 F: ø19.05 3m f: ø9.52 5m
 G: ø19.05 1m

Outdoor EP700

The total length of each liquid line is as follows:

ø28.58: A = 40 m
 ø19.05: F + G = 4 m
 ø12.70: C = 20 m
 ø9.52: B + D + E + b + e + f = 35 m
 ø6.35: a + c + d = 25 m

Therefore,
 <Calculation example>

Additional refrigerant charge
 = 40 × 0.33 + 4 × 0.14 + 20 × 0.11 + 35 × 0.054 + 25 × 0.021 + 6
 + 2 + 2 + 6
 = 34.4 (34.375) kg

■ Limitation of the amount of refrigerant to be charged

The above calculation result of the amount of refrigerant to be charged must become below the value in the table below.

4-1. Requirement on installation site

1. No direct thermal radiation to the unit.
2. No possibility of annoying the neighbors by the sound of the unit.

Valves and refrigerant flow on the outdoor unit may generate noise.

3. Avoid the sites where strong winds blow.
4. With strength to bear the weight of the unit.
5. Drain flow from the unit is cared at heating mode.
6. Enough space for installation and service as shown at 4-2.
7. Avoid the sites where acidic solutions or chemical sprays (sulfur series) are used frequently.
8. The unit should be secure from combustible gas, oil, steam, chemical gas like acidic solution, sulfur gas and so on.

4-2. Spacing

In case of single installation

- Secure enough space around the unit as shown in the figure.
- If the wall height exceeds the height limit, widen the space labeled "L" and "W" by the amount that exceeds the limit (labeled h in the figure).

(1) Walls are lower than the height limit.

Condition	L	W
Minimum space behind the unit	≥ 100 [3-15/16]	≥ 50 [1-31/32]
Minimum space on both sides of the unit	≥ 300 [11-13/16]	≥ 15 [19/32]

(2) If the wall height (H) of the front, rear or side exceeds the wall height restriction

Condition	L	W
Minimum space behind the unit	≥ 100 [3-15/16] + h	≥ 50 [1-31/32] + h
Minimum space on both sides of the unit	≥ 300 [11-13/16] + h	≥ 15 [19/32] + h

(3) If there are obstacles at the upper part of the unit

(Unit : mm [in.])

In case of collective installation and continuous installation

- When multiple units are installed adjacent to each other, secure enough space to allow for air circulation and passageways between groups of units as shown in the figures.
* Leave both sides of each group of units open.
- As with single installation, if the wall height exceeds the height limit, widen the space in the front and the back of a given group of units by the amount that exceeds the limit (labeled <h> in the figure).
- If there is a wall at both the front and the rear of the unit, install up to six units (three units: P450, 500, EP400, 450, 500) consecutively in the side direction and provide a space of 1000mm or more as inlet space/passage space for each six units (three units: P450, 500, EP400, 450, 500).

(1) Side-by-side installation

<The space on both sides of a given group of units is minimum.>

<The space on both sides of a given group of units is minimum.>

(2) Face-to-face installation

<There are walls in the front and the back of a given group of units.>

<There is a wall on one side.>

(3) Combination of face-to-face and side-by-side installations

<There are walls in the front and the back of a given group of units.>

<There is a wall on one side and either the front or the back of a given group of unit.>

(Unit : mm [in.])

4-3. Piping direction

4-3-1. Lifting method

- When lifting the unit with ropes, run the ropes under the unit and use the lifting hole.
- Support the unit at four points with two ropes, and avoid giving mechanical shock.
- Suspension rope angle must be 40° or less, so as to avoid compressing fan guard.
- Use two ropes, each at least 8m [26 ft.] in length
- Use ropes strong enough to support the weight of the unit.
- Always suspend the unit from four corners. (It is dangerous to suspend a unit from two corners and must not be attempted.)
- Use protective pads to keep the ropes from scratching the panels on the unit.
- Use a 50mm [1-31/32 in.] or thicker cardboard or cloth as a protective pad on the top of the unit to prevent contact between the fan guard and slings.

① P200, 250
EP200, 250

② P300, 350, 400
EP300, 350

③ P450, 500
EP400, 450, 500

CAUTION

Exercise caution when transporting products.

- Products weighing more than 20 kg [45 LBS] should not be carried alone.
- Do not carry the product by the PPbands.
- To avoid the risk of injury, do not touch the heat exchanger fins.
- Plastic bags may pose a risk of choking hazard to children. Tear plastic bags into pieces before disposing of them.
- When lifting and transporting outdoor units with ropes, run the ropes through lifting hole at the unit base. Securely fix the unit so that the ropes will not slide off, and always lift the unit at four points to prevent the unit from falling.

4-3-2. Installation

- Secure the unit with anchor bolts as shown in the figure below so that the unit will not topple over with strong wind or during an earthquake.
- Install the unit on a durable base made of such materials as concrete or angle steel.
- Take appropriate anti-vibration measures (e.g., vibration damper pad, vibration isolation base) to keep vibrations and noise from being transmitted from the unit through walls and floors.
- When using a rubber cushion, install it so that the cushion covers the entire width of the unit leg.
- Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure below is securely supported.
- Install the anchor bolt in such a way that the top end of the anchor bolt do not stick out more than 30 mm [1-3/16 in.].
- This unit is not designed to be anchored with post-installation-type anchor bolts, although by adding fixing brackets anchoring with such type of anchor bolts becomes possible.

- (A) : M10 anchor bolt procured at the site.
- (B) : Corner is not seated.
- (C) : Fixing bracket for hole-in anchor bolt (3 locations to fix with screws).
- (D) : Anti-vibration rubber
Install it so that the rubber covers the entire width of the unit leg.

⚠ WARNING

Properly install the unit on a surface that can withstand the weight of the unit. Unit installed on an unstable surface may fall and cause injury.

⚠ WARNING

Take appropriate safety measures against strong winds and earthquakes to prevent the unit from falling.

Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure is securely supported. The brackets may bend if they are not securely supported.

Install the unit in such a way that the corner of the angle bracket at the base of the unit shown in the figure is securely supported. The brackets may bend if they are not securely supported.

Take into consideration the durability of the base, water drainage route (Drain water is discharged from outdoor units during operation.), piping route, and wiring route when performing foundation work.

4-3-3. Anchor bolt positions

4-3-4. Installation

When the pipes and/or cables are routed at the bottom of the unit, make sure that the through hole at the base of the unit does not get blocked with the installation base.

When the pipes are routed at the bottom of the unit, the base should be at least 100 mm [3-15/16 in.] in height.

NO.	Usage		Specifications
(A)	For pipes	Bottom through hole	150 × 94 Knockout hole (5-29/32) (3-23/32)
(B)	For wires	Bottom through hole	Ø65 Knockout hole (2-9/16)
(C)		Bottom through hole	Ø52 Knockout hole (2-1/16)

Installation base parallel to the unit's front panel

Installation base perpendicular to the unit's front panel

4-3-5. Refrigerant pipe routing

Example of closure materials (field supply)

Fill the gap at the site

The gaps around the edges of through holes for pipes and wires on the unit allow water or mice to enter the unit and damage its parts. Close these gaps with filler plates.

This unit allows two types of pipe routing:

- Bottom piping
- Front piping

CAUTION

To prevent small animals, water and snow from entering the unit and damage its parts, close the gap around the edges of through holes for pipes and wires with filler plates.

※ The figure above shows a unit on which a low-pressure twinning pipe kit is not installed.

4-3-6. Twinning on the outdoor unit side

- The pipe from multiple outdoor units must be installed so that oil will not accumulate in the pipe under certain conditions. Refer to the figures below for details.

* Small dots in the figures indicate branching points.

Ⓐ In an R2 system: To a BC controller

- The pipe from the outdoor units must be inclined downward to the indoor unit side. In the figure on the right, because the pipe is inclined upward, the oil in the pipe accumulates when Unit 1 is in operation and Unit 2 is stopped.

- The distance between the unit bottom and the pipe (H) must be 0.2 m (7-7/8 in) or below. In the figure on the right, because the distance is more than 0.2 m (7-7/8 in), the oil accumulates in Unit 1 when Unit 2 is in operation and Unit 1 is stopped.

- The vertical separation between units (H) must be 0.1 m (3-15/16 in) or below. In the figure on the right, because the distance is more than 0.1 m (3-15/16 in), the oil accumulates in Unit 1 when Unit 2 is in operation and Unit 1 is stopped.

- The vertical separation between units (H) must be 0.1 m (3-15/16 in) or below. In the figure on the right, because the distance is more than 0.1 m (3-15/16 in), the oil accumulates in Unit 2 when Unit 1 is in operation and Unit 2 is stopped.

- Make sure that the inclination tolerance of the Twinning Kit is $\pm 15^\circ$ to the ground to avoid unit damage.

Ⓐ Twinning Kit

- Do not install traps to prevent oil backflow and compressor start-up failure.

4-3-7. Twinning on the outdoor unit side

See the following drawing for connecting the pipes between the outdoor units.

4-4. Weather countermeasure

In cold and/or snowy areas, sufficient countermeasures to wind and snow damages should be taken for operating unit in normal and good condition in winter time. Surround the units with snow nets or fences to protect them from snow. Even in the other areas, full consideration is required for installation of unit in order to prevent abnormal operations caused by wind or snow. **When rain and snow directly fall on unit in the case of air-conditioning operations in 10 or less degrees centigrade outdoor air (50 or less degrees fahrenheit outdoor air), mount inlet and outlet ducts on unit for assuring stable operations.**

Countermeasure to snow and wind

Prevention the Outdoor unit from wind and snow damages in cold or snowy areas, snow hood shown below is recommended and helpful.

*Do not use a snow hood made of stainless steel, which may cause the unit to rust. If the use of a stainless snow hood is the only option, contact the sales office before installing it.

- Snow hood

Note:

1. Height of frame base for snow damage prevention (H) shall be twice as high as expected snowfall. Width of frame base shall not exceed that of the unit. The frame base shall be made of angle steel, etc., and designed so that snow and wind slip through the structure. (If frame base is too wide, snow will be accumulated on it.)
2. Install unit so that wind will not directly lash against openings of inlet and outlet ducts.
3. Build frame base at customer referring to this figure.
Material : Galvanized steel plate 1.2T [1/16 in. T]
Painting : Overall painting with polyester powder
Color : Munsell 5Y8/1 (same as that of unit)
4. To install units side by side, install a filler plate between the fan guard and the outlet-side snow food as shown in Figure A.
(The filler plate provided accommodates the installation pitch of between 30-80 mm [1-3/16~3-5/32 in.])
5. When the unit is used in a cold region and the heating operation is continuously performed for a long time when the outside air temperature is below freezing, install a heater to the unit base or take other appropriate measures to prevent water from freezing on the base.

Figure A Filler plate

Countermeasure to wind

Referring to the figure shown below, take appropriate measures which will suit the actual situation of the place for installation.

A unit installed alone is vulnerable to strong winds. Select the installation site carefully to minimize the effect of winds.

To install a unit in a place where the wind always blows from the same direction, install the unit so that the outlet faces away from the direction of the wind.

Install the outdoor unit where seasonal winds do not blow directly against the unit, such as behind a building.

Install the outdoor unit to avoid having seasonal winds against the front of air outlet/inlet on the unit.

5-1. General precautions

5-1-1. Usage

- The air-conditioning system described in this Data Book is designed for human comfort.
- This product is not designed for preservation of food, animals, plants, precision equipment, or art objects. To prevent quality loss, do not use the product for purposes other than what it is designed for.
- To reduce the risk of water leakage and electric shock, do not use the product for air-conditioning vehicles or vessels.

5-1-2. Installation environment

- Do not install any unit other than the dedicated unit in a place where the voltage changes a lot, large amounts of mineral oil (e.g., cutting oil) are present, cooking oil may splash, or a large quantity of steam can be generated such as a kitchen.
- Do not install the unit in acidic or alkaline environment.
- Installation should not be performed in the locations exposed to chlorine or other corrosive gases. Avoid near a sewer.
- To reduce the risk of fire, do not install the unit in a place where flammable gas may be leaked or inflammable material is present.
- This air conditioning unit has a built-in microcomputer. Take the noise effects into consideration when deciding the installation position. Especially in a place where antenna or electronic device are installed, it is recommended that the air conditioning unit be installed away from them.
- Install the unit on a solid foundation according to the local safety measures against typhoons, wind gusts, and earthquakes to prevent the unit from being damaged, toppling over, and falling.

5-1-3. Backup system

- In a place where air conditioner's malfunctions may exert crucial influence, it is recommended to have two or more systems of single outdoor units with multiple indoor units.

5-1-4. Unit characteristics

- Heat pump efficiency depends on outdoor temperature. In the heating mode, performance drops as the outside air temperature drops. In cold climates, performance can be poor. Warm air would continue to be trapped near the ceiling and the floor level would continue to stay cold. In this case, heat pumps require a supplemental heating system or air circulator. Before purchasing them, consult your local distributor for selecting the unit and system.
- When the outdoor temperature is low and the humidity is high, the heat exchanger on the outdoor unit side tends to collect frost, which reduces its heating performance. To remove the frost, Auto-defrost function will be activated and the heating mode will temporarily stop for 3-10 minutes. Heating mode will automatically resume upon completion of defrost process.
- Air conditioner with a heat pump requires time to warm up the whole room after the heating operation begins, because the system circulates warm air in order to warm up the whole room.
- The sound levels were obtained in an anechoic room. The sound levels during actual operation are usually higher than the simulated values due to ambient noise and echoes. Refer to the section on "SOUND LEVELS" for the measurement location.
- Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes even when operating normally. Please consider to avoid location where quietness is required. For BC controller, it is recommended to unit to be installed in places such as ceilings of corridor, restrooms and plant rooms.
- The total capacity of the connected indoor units can be greater than the capacity of the outdoor unit. However, when the connected indoor units operate simultaneously, each unit's capacity may become smaller than the rated capacity.
- When the unit is started up for the first time within 12 hours after power on or after power failure, it performs initial startup operation (capacity control operation) to prevent damage to the compressor. The initial startup operation requires 90 minutes maximum to complete, depending on the operation load.

5-1-5. Relevant equipment

- Use an earth leakage breaker (ELB) with medium sensitivity, and an activation speed of 0.1 second or less.
- Consult your local distributor or a qualified technician when installing an earth leakage breaker.
- If the unit is inverter type, select an earth leakage breaker for handling high harmonic waves and surges.
- Leakage current is generated not only through the air conditioning unit but also through the power wires. Therefore, the leakage current of the main power supply is greater than the total leakage current of each unit. Take into consideration the capacity of the earth leakage breaker or leakage alarm when installing one at the main power supply. To measure the leakage current simply on site, use a measurement tool equipped with a filter, and clamp all the four power wires together. The leakage current measured on the ground wire may not accurate because the leakage current from other systems may be included to the measurement value.
- Do not install a phase advancing capacitor on the unit connected to the same power system with an inverter type unit and its equipment.
- If a large current flows due to the product malfunctions or faulty wiring, both the earth leakage breaker on the product side and the upstream overcurrent breaker may trip almost at the same time. Separate the power system or coordinate all the breakers depending on the system's priority level.

5-1-6. Unit installation

- Your local distributor or a qualified technician must read the Installation Manual that is provided with each unit carefully before performing installation work.
- Consult your local distributor or a qualified technician when installing the unit. Improper installation by an unqualified person may result in water leakage, electric shock, or fire.
- Ensure there is enough space around each unit.

5-1-7. Optional accessories

- Only use accessories recommended by Mitsubishi Electric. Consult your local distributor or a qualified technician when installing them. Improper installation by an unqualified person may result in water leakage, electric leakage, system breakdown, or fire.
- Some optional accessories may not be compatible with the air conditioning unit to be used or may not be suitable for the installation conditions. Check the compatibility when considering any accessories.
- Note that some optional accessories may affect the air conditioner's external form, appearance, weight, operating sound, and other characteristics.

5-1-8. Operation/Maintenance

- Read the Instruction Book that is provided with each unit carefully prior to use.
- Maintenance or cleaning of each unit may be risky and require expertise. Read the Instruction Book to ensure safety. Consult your local distributor or a qualified technician when special expertise is required such as when the indoor unit needs to be cleaned.

5-2. Precautions for Indoor unit**5-2-1. Operating environment**

- The refrigerant (R410A) used for air conditioner is non-toxic and nonflammable. However, if the refrigerant leaks, the oxygen level may drop to harmful levels. If the air conditioner is installed in a small room, measures must be taken to prevent the refrigerant concentration from exceeding the safety limit even if the refrigerant should leak.
- If the units operate in the cooling mode at the humidity above 80%, condensation may collect and drip from the indoor units.

5-2-2. Unit characteristics

- The return air temperature display on the remote controller may differ from the ones on the other thermometers.
- The clock on the remote controller may be displayed with a time lag of approximately one minute every month.
- The temperature using a built-in temperature sensor on the remote controller may differ from the actual room temperature due to the effect of the wall temperature.
- Use a built-in thermostat on the remote controller or a separately-sold thermostat when indoor units installed on or in the ceiling operate the automatic cooling/heating switchover.
- The room temperature may rise drastically due to Thermo OFF in the places where the air conditioning load is large such as computer rooms.
- Be sure to use a regular filter. If an irregular filter is installed, the unit may not operate properly, and the operation noise may increase.
- The room temperature may rise over the preset temperature in the environment where the heating air conditioning load is small.

5-2-3. Unit installation

- For simultaneous cooling/heating operation type air conditioners (R2, WR2 series), the G-type BC controller cannot be connected to the 16HP outdoor unit model or above, and the G- and GA-type BC controllers cannot be connected to the 28HP model or above. The GB- and HB-type BC controllers (sub) cannot be connected to the outdoor unit directly, and be sure to use them with GA- and HA-type BC controllers (main).
- The insulation for low pressure pipe between the BC controller and outdoor unit shall be at least 20 mm thick. If the unit is installed on the top floor or in a high-temperature, high-humidity environment, thicker insulation may be necessary.
- Do not have any branching points on the downstream of the refrigerant pipe header.
- When a field-supplied external thermistor is installed or when a device for the demand control is used, abnormal stop of the unit or damage of the electromagnetic contactor may occur. Consult your local distributor for details.
- When indoor units operate a fresh air intake, install a filter in the duct (field-supplied) to remove the dust from the air.
- The 4-way or 2-way Airflow Ceiling Cassette Type units that have an outside air inlet can be connected to the duct, but need a booster fan to be installed at site. Refer to the chapter "Indoor Unit" for the available range for fresh air intake volume.
- Operating fresh air intake on the indoor unit may increase the sound pressure level.

5-3. Precautions for Fresh air intake type indoor unit

5-3-1. Usage

- This unit mainly handles the outside air load, and is not designed to maintain the room temperature. Install other air conditioners for handling the air conditioning load in the room.

5-3-2. Unit characteristics

- This unit cannot perform the drying operation. The unit will continue the fan operation and blow fresh air (air that is not air-conditioned) when the Heating Thermo-OFF or Cooling Thermo-OFF mode is selected.
- The fan may stop tentatively when the unit is connected to the simultaneous cooling/heating operation type outdoor unit (R2, WR2 series) or during the defrost cycle.
- This unit switches the Thermo ON or OFF depending on the room temperature. The outside air is directly supplied into the room during Thermo OFF. Take caution of the cold supply air due to low outside air temperature and of condensation in the room due to high humidity of the outside air.
- Outside air temperature ranges for the operation must be as follows:
Cooling: 21°C D.B./15.5°C W.B. ~ 43°C D.B./35°C W.B.
Heating: -10°C D.B. ~ 20°C D.B.
The unit is forced to operate Thermo OFF (fan operation) when the outside air temperature is as follows.
Cooling: 21°C D.B. or below; Heating: 20°C D.B. or above
- Either a remote controller (sold separately) or a remote sensor (sold separately) must be installed to monitor the room temperature.
- If only this unit is used as an indoor unit, condensation may form at the supply air grill while the unit is operated in the cooling mode. This unit cannot operate dehumidifying.
- Use the unit in the way that the airflow rate will not exceed the 110% of the rated airflow.

5-4. Precautions for Outdoor unit/Heat source unit

5-4-1. Installation environment

- Outdoor unit with salt-resistant specification is recommended to use in a place where it is subject to salt air.
- Even when the unit with salt-resistant specification is used, it is not completely protected against corrosion. Be sure to follow the directions or precautions described in Instructions Book and Installation Manual for installation and maintenance. The salt-resistant specification is referred to the guidelines published by JRAIA (JRA9002).
- Install the unit in a place where the flow of discharge air is not obstructed. If not, the short-cycling of discharge air may occur.
- Provide proper drainage around the unit base, because the condensation may collect and drip from the outdoor units. Provide water-proof protection to the floor when installing the units on the rooftop.
- In a region where snowfall is expected, install the unit so that the outlet faces away from the direction of the wind, and install a snow guard to protect the unit from snow. Install the unit on a base approximately 50 cm higher than the expected snowfall. Close the openings for pipes and wiring, because the ingress of water and small animals may cause equipment damage. If SUS snow guard is used, refer to the Installation Manual that comes with the snow guard and take caution for the installation to avoid the risk of corrosion.
- When the unit is expected to operate continuously for a long period of time at outside air temperatures of below 0°C, take appropriate measures, such as the use of a unit base heater, to prevent icing on the unit base. (Not applicable to the PUMY series)
- Install the snow guard so that the outlet/inlet faces away from the direction of the wind.
- When the snow accumulates approximately 50 cm or more on the snow guard, remove the snow from the guard. Install a roof that is strong enough to withstand snow loads in a place where snow accumulates.
- Provide proper protection around the outdoor units in places such as schools to avoid the risk of injury.
- A cooling tower and heat source water circuit should be a closed circuit that water is not exposed to the atmosphere. When a tank is installed to ensure that the circuit has enough water, minimize the contact with outside air so that the oxygen from being dissolved in the water should be 1 mg/L or less.
- Install a strainer (50 mesh or more recommended) on the water pipe inlet on the heat source unit.
- Interlock the heat source unit and water circuit pump.
- Note the followings to prevent the freeze bursting of pipe when the heat source unit is installed in a place where the ambient temperature can be 0°C or below.
 - Keep the water circulating to prevent it from freezing when the ambient temperature is 0°C or below.
 - Before a long period of non use, be sure to purge the water out of the unit.
- Salt-resistant unit is resistant to salt corrosion, but not salt-proof.
Please note the following when installing and maintaining outdoor units in marine atmosphere.
 1. Install the salt-resistant unit out of direct exposure to sea breeze, and minimize the exposure to salt water mist.
 2. Avoid installing a sun shade over the outdoor unit, so that rain will wash away salt deposits off the unit.
 3. Install the unit horizontally to ensure proper water drainage from the base of the unit. Accumulation of water in the base of the outdoor unit will significantly accelerate corrosion.
 4. Periodically wash salt deposits off the unit, especially when the unit is installed in a coastal area.
 5. Repair all noticeable scratches after installation and during maintenance.
 6. Periodically check the unit, and apply anti-rust agent and replace corroded parts as necessary.

5-4-2. Circulating water

- ♦ Follow the guidelines published by JRAIA (JRA-GL02-1994) to check the water quality of the water in the heat source unit regularly.
- ♦ A cooling tower and heat source water circuit should be a closed circuit that water is not exposed to the atmosphere. When a tank is installed to ensure that the circuit has enough water, minimize the contact with outside air so that the oxygen from being dissolved in the water should be 1 mg/L or less.

5-4-3. Unit characteristics

- ♦ When the Thermo ON and OFF is frequently repeated on the indoor unit, the operation status of outdoor units may become unstable.

5-4-4. Relevant equipment

- ♦ Provide grounding in accordance with the local regulations.

5-5. Precautions for Control-related items**5-5-1. Product specification**

- ♦ To introduce the MELANS system, a consultation with us is required in advance. Especially to introduce the electricity charge apportioning function or energy-save function, further detailed consultation is required. Consult your local distributor for details.
- ♦ Billing calculation for AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J/TG-2000A, or the billing calculation unit is unique and based on our original method. (Backup operation is included.) It is not based on the metering method, and do not use it for official business purposes. It is not the method that the amount of electric power consumption (input) by air conditioner is calculated. Note that the electric power consumption by air conditioner is apportioned by using the ratio corresponding to the operation status (output) for each air conditioner (indoor unit) in this method.
- ♦ In the apportioned billing function for AE-200E/AE-50E/EW-50E/AG-150A and EB-50GU-J, use separate watt-hour meters for A-control units, K-control units, and packaged air conditioner for City Multi air conditioners. It is recommended to use an individual watt-hour meter for the large-capacity indoor unit (with two or more addresses).
- ♦ When using the peak cut function on the AE-200E/AE-50E/EW-50E/AG-150A or EB-50GU-J, note that the control is performed once every minute and it takes time to obtain the effect of the control. Take appropriate measures such as lowering the criterion value. Power consumption may exceed the limits if AE-200E/AE-50E/EW-50E/AG-150A or EB-50GU-J malfunctions or stops. Provide a back-up remedy as necessary.
- ♦ The controllers cannot operate while the indoor unit is OFF. (No error)
Turn ON the power to the indoor unit when operating the controllers.
- ♦ When using the interlocked control function on the AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J/PAC-YG66DCA or PAC-YG63MCA, do not use it for the control for the fire prevention or security. (This function should never be used in the way that would put people's lives at risk.) Provide any methods or circuit that allow ON/OFF operation using an external switch in case of failure.

5-5-2. Installation environment

- ♦ The surge protection for the transmission line may be required in areas where lightning strikes frequently occur.
- ♦ A receiver for a wireless remote controller may not work properly due to the effect of general lighting. Leave a space of at least 1 m between the general lighting and receiver.
- ♦ When the Auto-elevating panel is used and the operation is made by using a wired remote controller, install the wired remote controller to the place where all air conditioners controlled (at least the bottom part of them) can be seen from the wired remote controller. If not, the descending panel may cause damage or injury, and be sure to use a wireless remote controller designed for use with elevating panel (sold separately).
- ♦ Install the wired remote controller (switch box) to the place where the following conditions are met.
 - ♦ Where installation surface is flat
 - ♦ Where the remote controller can detect an accurate room temperature
The temperature sensors that detect a room temperature are installed both on the remote controller and indoor unit. When a room temperature is detected using the sensor on the remote controller, the main remote controller is used to detect a room temperature. In this case, follow the instructions below.
 - ♦ Install the controller in a place where it is not subject to the heat source.
(If the remote controller faces direct sunlight or supply air flow direction, the remote controller cannot detect an accurate room temperature.)
 - ♦ Install the controller in a place where an average room temperature can be detected.
 - ♦ Install the controller in a place where no other wires are present around the temperature sensor.
(If other wires are present, the remote controller cannot detect an accurate room temperature.)
- ♦ To prevent unauthorized access, always use a security device such as a VPN router when connecting AE-200E/AE-50E/EW-50E/AG-150A/EB-50GU-J or TG-2000A to the Internet.

The installer and/or air conditioning system specialist shall secure safety against refrigerant leakage according to local regulations or standards. The following standard may be applicable if no local regulation or standard is available.

6-1. Refrigerant property

R410A refrigerant is harmless and incombustible. The R410A is heavier than the indoor air in density. Leakage of the refrigerant in a room has possibility to lead to a hypoxia situation. Therefore, the critical concentration specified below shall not be exceeded even if the leakage happens.

• Critical concentration

Critical concentration hereby is the refrigerant concentration in which no human body would be hurt if immediate measures can be taken when refrigerant leakage happens.

Critical concentration of R410A: 0.44kg/m³
(The weight of refrigeration gas per 1 m³ air conditioning space.);

* The Critical concentration is subject to ISO5149, EN378-1.

For the CITY MULTI system, the concentration of refrigerant leaked should not have a chance to exceed the critical concentration in any situation.

6-2. Confirm the Critical concentration and take countermeasure

The maximum refrigerant leakage concentration (Rmax) is defined as the result of the possible maximum refrigerant weight (Wmax) leaked into a room divided by its room capacity (V). It is referable to Fig.6-1. The refrigerant of Outdoor unit here includes its original charge and additional charge at the site.

The additional charge is calculated according to "3-3. Refrigerant charging calculation" and shall not be over charged at the site.

Procedure 6-2-1~3 tells how to confirm maximum refrigerant leakage concentration (Rmax) and how to take countermeasures against a possible leakage.

Fig. 6-1 The maximum refrigerant leakage concentration

6-2-1. Find the room capacity (V),

If a room having total opening area more than 0.15% of the floor area at a low position with another room/space, the two rooms/space are considered as one. The total space shall be added up.

6-2-2. Find the possible maximum leakage (Wmax) in the room. If a room has Indoor unit(s) from more than 1 Outdoor unit, add up the refrigerant of the Outdoor units.

6-2-3. Divide (Wmax) by (V) to get the maximum refrigerant leakage concentration (Rmax).

6-2-4. Find if there is any room in which the maximum refrigerant leakage concentration (Rmax) is over 0.44kg/m³.

If no, then the CITY MULTI is safe against refrigerant leakage.

If yes, following countermeasure is recommended to do at site.

Countermeasure 1: Let-out (making V bigger)

Design an opening of more than 0.15% of the floor area at a low position of the wall to let out the refrigerant whenever leaked.

e.g. make the upper and lower seams of door big enough.

Countermeasure 2: Smaller total charge (making Wmax smaller)

e.g. Avoid connecting more than 1 Outdoor unit to one room.

e.g. Using smaller model size but more Outdoor units.

e.g. Shorten the refrigerant piping as much as possible.

Countermeasure 3: Fresh air in from the ceiling (Ventilation)

As the density of the refrigerant is bigger than that of the air. Fresh air supply from the ceiling is better than air exhausting from the ceiling.

Fresh air supply solution refers to Fig.6-2~4.

Fig.6-2. Fresh air supply always ON

Fig.6-3. Fresh air supply upon sensor action

Fig.6-4. Fresh air supply and refrigerant shut-off upon sensor action

Note 1. Countermeasure 3 should be done in a proper way in which the fresh air supply shall be on whenever the leakage happens.

Note 2. In principle, MITSUBISHI ELECTRIC requires proper piping design, installation and air-tight testing after installation to avoid leakage happening.

In the area should earthquake happen, anti-vibration measures should be fully considered.

The piping should consider the extension due to the temperature variation.

CITY MULTI R410A series YKB/YLM 2nd edition

DATA BOOK

for a greener tomorrow

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

⚠ Warning

- Do not use refrigerant other than the type indicated in the manuals provided with the unit and on the nameplate.
 - Doing so may cause the unit or pipes to burst, or result in explosion or fire during use, during repair, or at the time of disposal of the unit.
 - It may also be in violation of applicable laws.
 - MITSUBISHI ELECTRIC CORPORATION cannot be held responsible for malfunctions or accidents resulting from the use of the wrong type of refrigerant.
- Our air-conditioning equipments and heat pumps contain a fluorinated greenhouse gas, R410A.

MITSUBISHI ELECTRIC CORPORATION
