7 SERVICE FUNCTIONS

MCFZ-A12WV - E1 MCFZ-A18WV - E1 MCFZ-A24WV - E1

7-1. TIMER SHORT MODE

For service, set time can be shortened by short circuit of JPG and JPS on the electronic control P.C. board.
The time will be shortened as follows. (Refer to page 17 or 18.)
3-minutes time delay : 3-minutes → 3-seconds
Set time : 1 minute ➔ 1-second
Set time : 3 minute ➔ 3-second (It takes 3 minutes for the compressor to start operation. However, the starting time is shortened by short circuit of JPG and JPS.)

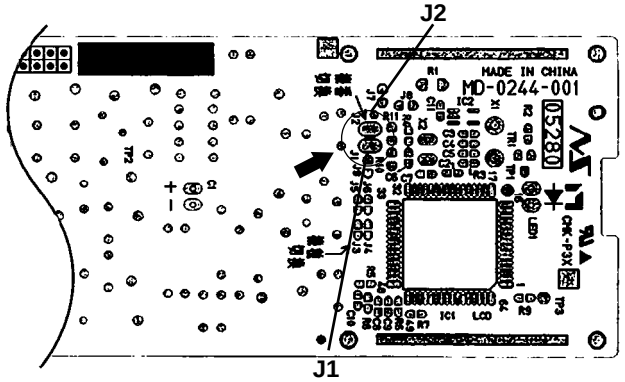
7-2. P.C. BOARD MODIFICATION FOR INDIVIDUAL OPERATION

A maximum of 4 indoor units with wireless remote controllers can be used in a room. In this case, to operate each indoor unit individually by each remote controller, P.C. boards of remote controller must be modified according to the number of the indoor unit.

How to modify the remote controller P.C. board

Remove batteries before modification. The board has a print as shown below;

Remote controller model : KG04B(MCFZ-A12WV),KG04C(MCFZ-A18/A24WV)



NOTE : For remodelling, take out the batteries and press the OPERATE/STOP(ON/OFF) button twice or 3 times at first.
After finish remodelling, put back the batteries then press the RESET button.

The P.C. board has the print “J1” and “J2”. Solder “J1” and “J2” according to the number of indoor unit as shown in Table 1. After modification, press the RESET button.

Table1.

	1 unit operation	2 units operation	3 units operation	4 units operation
No. 1 unit	No modification	Same as at left	Same as at left	Same as at left
No. 2 unit	–	Solder J1	Same as at left	Same as at left
No. 3 unit	–	–	Solder J2	Same as at left
No. 4 unit	–	–	–	Solder both J1 and J2

How to set the remote controller exclusively for particular indoor unit

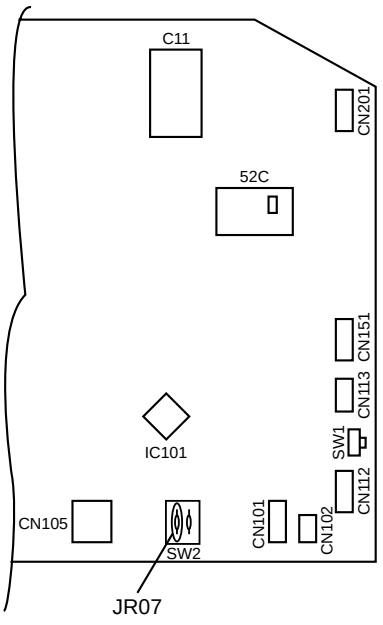
After you turn the breaker ON, the first remote controller that sends the signal to the indoor unit will be regarded as the remote controller for the indoor unit.
The indoor unit will only accepts the signal from the remote controller that has been assigned to the indoor unit once they are set.
The setting will be cancelled if the breaker has turned off, or the power supply has shut down.
Please conduct the above setting once again after the power has restored.

7-3. AUTO RESTART FUNCTION

When the indoor unit is controlled with the remote controller, the operation mode, the set temperature, and the fan speed are memorized by the indoor electronic control P.C. board. The “AUTO RESTART FUNCTION” sets to work the moment power has restored after power failure.Then, the unit will restart automatically. However if the unit is operated in “I FEEL CONTROL” or “AUTO” mode before power failure, the operation is not memorized. In “I FEEL CONTROL” mode, the operation is decided by the initial room temperature.

How to release “AUTO RESTART FUNCTION”

①Turn off the main power for the unit.
②Pull out the electronic control P.C. board. (Refer to page 19.)
③Solder jumper wire to the JR07 on the indoor electronic control P.C. board. (Refer to page 17 or 18.)



Operation

①If the main power has been cut, the operation settings remain.
②After the power is restored, the unit restarts automatically according to the memory.(However, it takes at least 3 minutes for the compressor to start running.)

NOTE

- The operation settings are memorized when 10 seconds have passed after the indoor unit was operated with the remote controller.
- If main power is turned OFF or a power failure occurs while AUTO START/STOP timer is active, the timer setting is cancelled.
- If the unit has been off with the remote controller before power failure, the auto restart function does not work as the power button of the remote controller is off.
- To prevent breaker off due to the rush of starting current, systematize other home appliances not to turn on at the same time.
- When some air conditioners are connected to the same supply system, if they are operated before power failure, the starting current of all the compressors may flow simultaneously at restart.
  Therefore, the special counter-measures are required to prevent the main voltage-drop or the rush of the starting current by adding to the system that allows the units to start one by one.

8 TROUBLESHOOTING

MCFZ-A12WV -E1 MCFZ-A18WV -E1 MCFZ-A24WV -E1

8-1. Cautions on troubleshooting

1. Before troubleshooting, check the following:

(1) Check the power supply voltage.

(2) Check the indoor/outdoor connecting wire for mis-wiring.

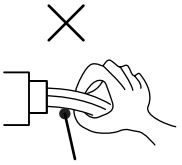
2. Take care the following during service.

(1) Before servicing the air conditioner, be sure to first turn off the remote controller to stop the main unit, and then after confirming the horizontal vane has completely closed, turn off the breaker.

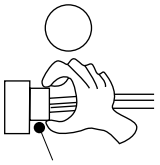
(2) Be sure to unplug the power cord before removing the air inlet grille, the front panel, the cabinet, the top panel and the electronic control P.C. boards.

(3) When removing the electronic control P.C. board, hold the edge of the board with care NOT to apply stress on the components.

(4) When connecting or disconnecting the connectors, hold the housing of the connector. DO NOT pull the lead wires.



Lead wiring



Housing point

3. Troubleshooting procedure

(1) First, check if the OPERATION INDICATOR lamp on the indoor unit is flashing on and off to indicate an abnormality. To make sure, check how many times the abnormality indication is flashing on and off before starting service work.

(2) If the electronic control P.C. board is supposed to be defective, check the copper foil pattern for disconnection and the components for bursting and discoloration.

(3) When troubleshooting, refer to the flow chart and the check table on page 11 and 12.

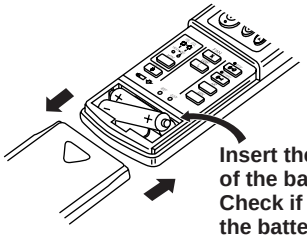
4. How to replace batteries

Weak batteries may cause the remote controller malfunction.

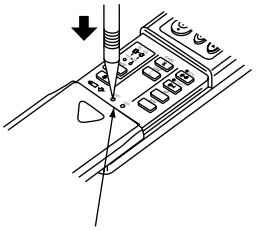
In this case, replace the batteries to operate the remote controller normally.

① Remove the front lid and insert batteries. Then reattach the front lid.

② Press the RESET button with tip end of ball point pen or the like, and then use the remote controller.



Insert the negative pole of the batteries first. Check if the polarity of the batteries are correct.



RESET button

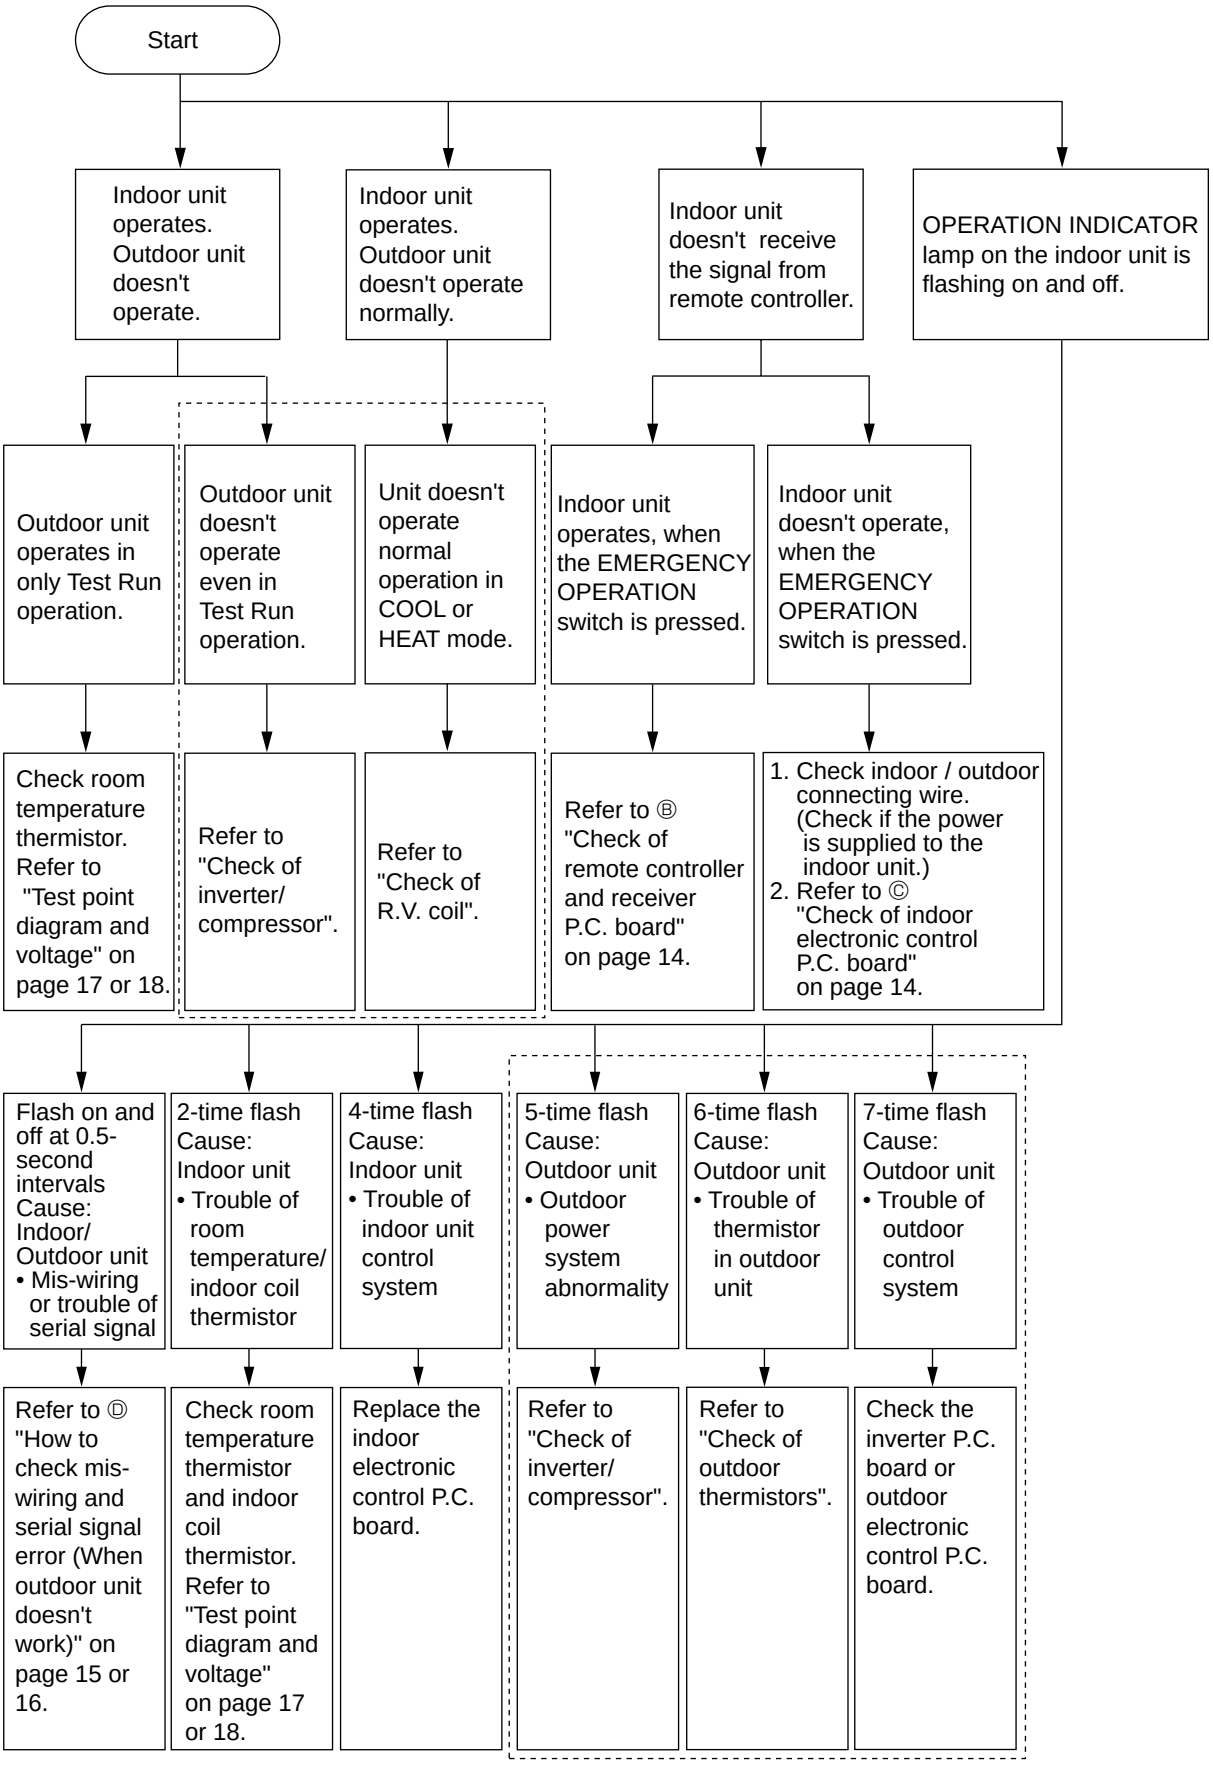
NOTE : 1.These figures show about MCFZ-A18WV or MCFZ-A24WV.

2. If the RESET button is not pressed, the remote controller may not operate correctly.

3. Remote controller of MCFZ-A12WV has a circuit to automatically reset the microcomputer when batteries are replaced.

This function is equipped to prevent the microcomputer from malfunctioning due to the voltage drop caused by the battery replacement.

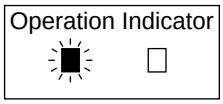
8-2. Instruction of troubleshooting



As for outdoor units MUZ-A12YV and MUZ-A12YVH, refer to service manual OB328 REVISED EDITION-A.
As for outdoor units MUZ-A18YV and MUZ-A24YV, refer to service manual OB346 REVISED EDITION-A.

1. Troubleshooting check table

• The following indication applies regardless of shape of the indicator.



Lighted

Not lighted

· Flashing of the OPERATION INDICATOR lamp (left-hand side lamp) indicates possible abnormalities.
· The OPERATION INDICATOR lamp (left-hand side lamp) is lighting during normal operation.

NOTE : Before taking measures, make sure that the symptom reappears for accurate troubleshooting.
Self check table

No.	Abnormal point	Operation indicator lamp	Symptom	Detection method	Check point
1	Mis-Wiring or Serial signal	0.5-second ON 0.5-second OFF	Outdoor unit does not operate.	3 minutes after power supply turns ON, when serial signal is not received.	• Refer to Ⓓ "How to check mis-wiring and serial signal error." on page 15 or 16.
2	Indoor coil thermistor Room tempera-ture thermistor	2-time flash 2.5-second OFF	Outdoor unit does not operate.	Detect Indoor coil/room temperature thermistor short or open circuit every 8 seconds during operation.	• Refer to the characteristics of indoor coil thermistor, and room temperature thermistor on page 17 or 18.
3	Indoor control system	4-time flash 2.5-second OFF	Outdoor unit does not operate.	When it cannot properly read data in the nonvolatile memory of indoor electronic control P.C. board.	• Replace the indoor electronic control P.C. board.
4	Outdoor power system	5-time flash 2.5-second OFF	Outdoor unit does not operate.	When it consecutively occurs 3 times that compressor stops for overcurrent protection within 1 minute after start-up.	• Refer to "Check of inverter/ compressor". Refer to service manual OB328 REVISED EDITION-A or OB346 REVISED EDITION-A.
5	Outdoor thermistor	6-time flash 2.5-second OFF	Outdoor unit does not operate.	<Thermistor short> Thermistors are abnormal when they short after compressor start-up. <Thermistor open> Thermistors are abnormal when they open after compressor start-up. However, discharge temperature thermistor is abnormal when open circuit is detected more than 10 minutes after compressor start-up.	• Shortage of refrigerant. Refer to "Check of outdoor thermistor". Refer to service manual OB328 REVISED EDITION-A or OB346 REVISED EDITION-A.
6	Outdoor control system	7-time flash 2.5-second OFF	Outdoor unit does not operate.	When it cannot properly read data in the nonvolatile memory of inverter P.C. board or outdoor electronic control P.C. board.	• Check the inverter P.C. board or outdoor electronic control P.C. board. Refer to service manual OB328 REVISED EDITION-A or OB346 REVISED EDITION-A.

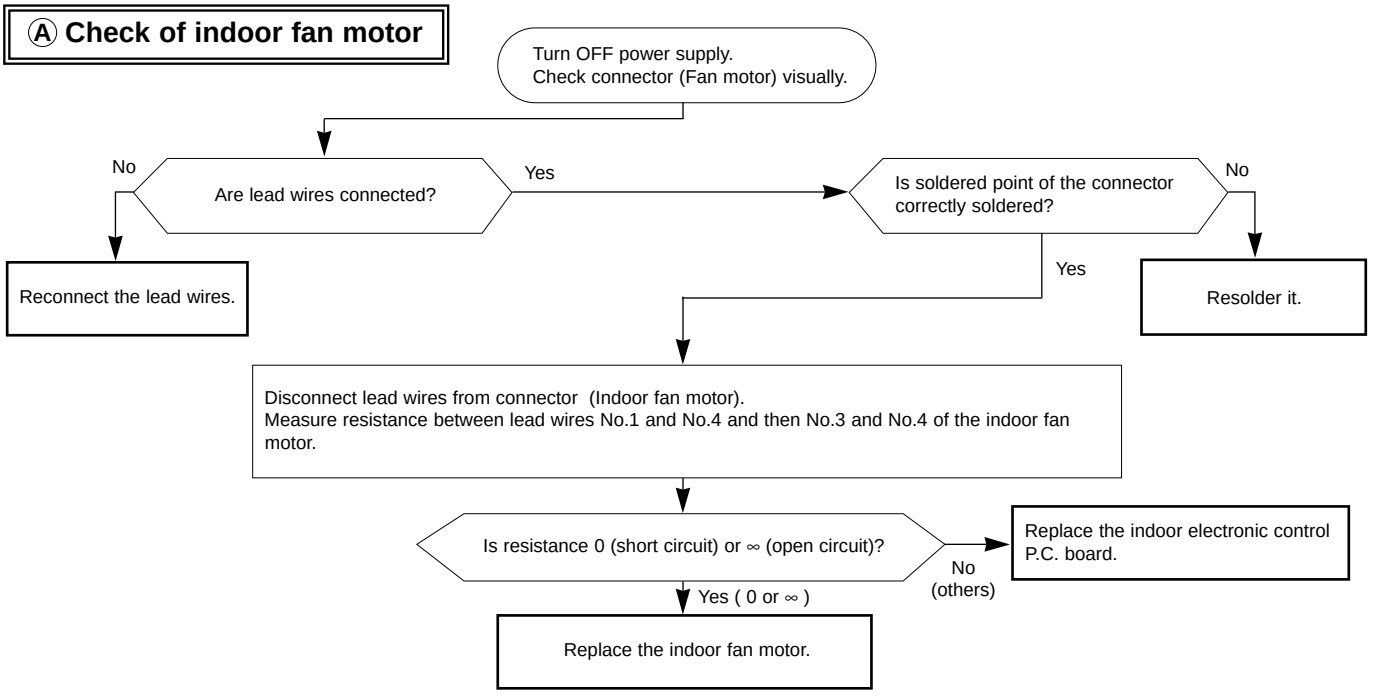
Indoor fan does not operate.

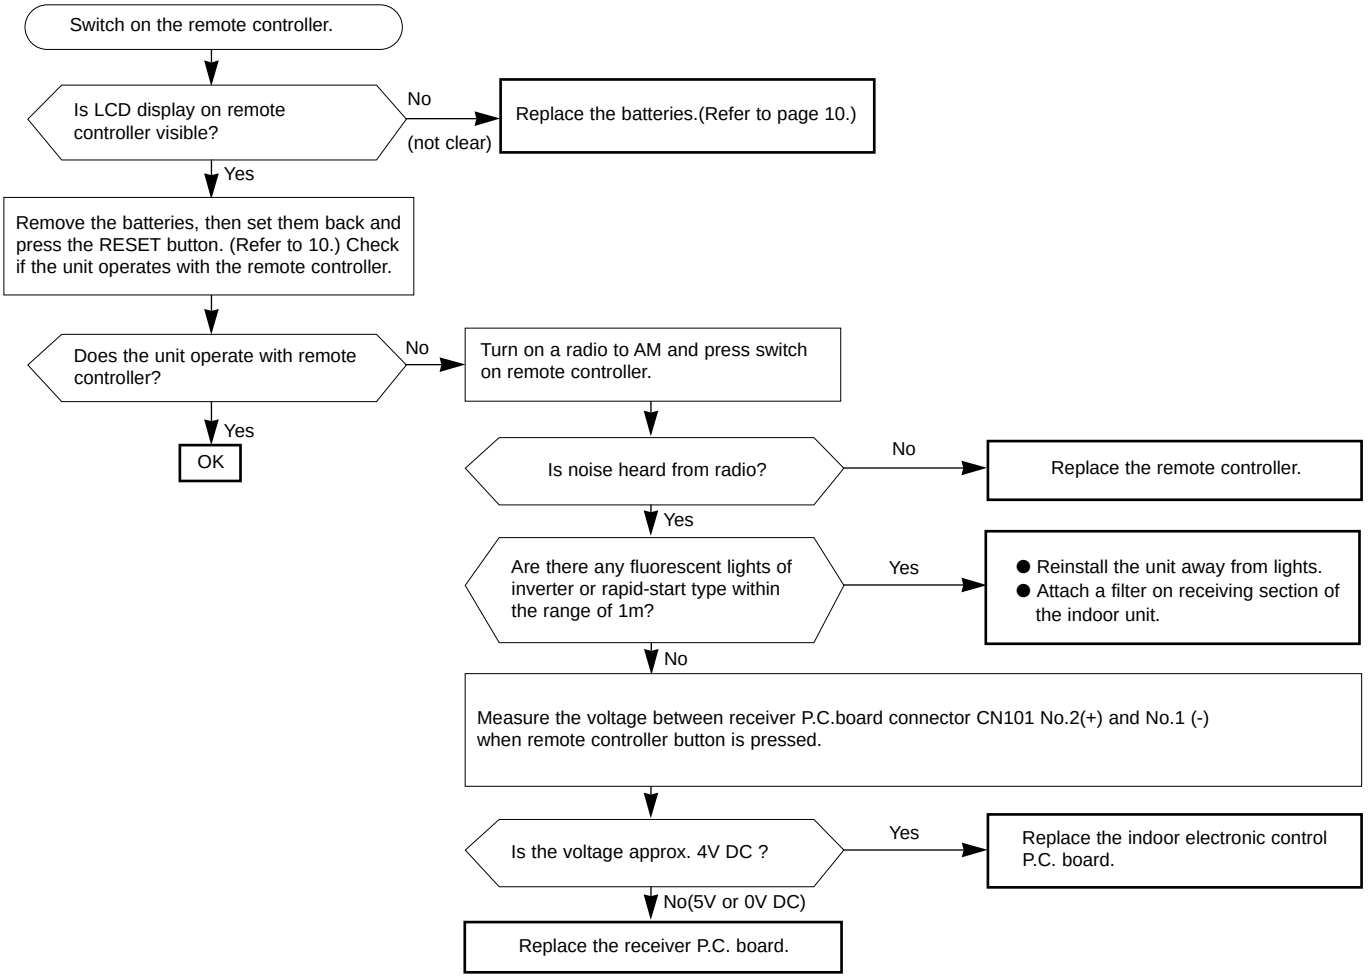
Ⓐ Check of indoor fan motor



Indoor unit operates by pressing the EMERGENCY OPERATION switch, but does not operate with the remote controller.

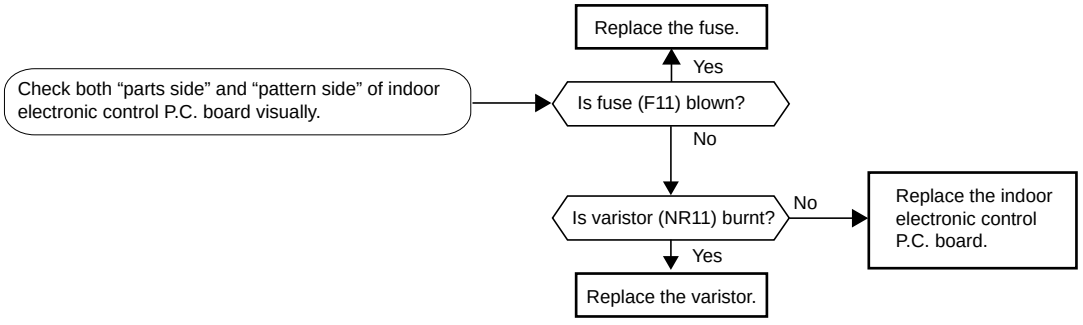
Ⓑ Check of remote controller and receiver P.C. board

※ Check if the remote controller is exclusive for this air conditioner.



The unit does not operate with the remote controller.
Also, the OPERATION INDICATOR lamp doesn't light up by pressing the EMERGENCY OPERATION switch.

Ⓒ Check of indoor electronic control P.C. board



When OPERATION INDICATOR lamp flashes ON and OFF in every 0.5-second.
Outdoor unit does not operate.

Ⓓ How to check mis-wiring and serial signal error (when outdoor unit does not work)

MCFZ-A12WV

Start

• Turn ON the power supply(Indoor unit).
• Press once EMERGENCY OPERATION switch.

After 3 minutes, mis-wiring is indicated (0.5-second ON, 0.5-second OFF) on OPERATION INDICATOR lamp on indoor unit.※

Is there any mis-wiring, poor contact, or wire disconnection? ※2

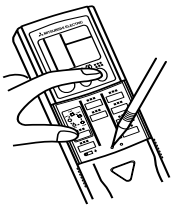
Yes → Make them sure.

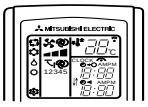
No

A

B

Turn OFF the power supply(Indoor unit).
Disconnect the indoor/ outdoor connecting wire.
Short-circuit indoor terminal block [N] and [3].
Turn ON the power supply(Indoor unit).
During pressing both the OPERATION SELECT button and TOO COOL button on the remote controller at the same time, press the RESET button.
At first, release the RESET button.
And release the other two buttons since all LCD in operation display section of the remote controller is displayed after 3 seconds.
Transmit the signal of remote controller, pressing OPERATE/STOP (ON/OFF) button on the remote controller.
(The above procedure allows OPERATION INDICATOR lamp to indicate the failure-mode.)





•The following indication applies regardless of shape of the indicator.

Blinking

Operation Indicator

Does the right side of OPERATION INDICATOR lamp blink quickly?

No (light up or OFF) → Replace the indoor electronic control P.C. board.

Yes

Release the failure mode. ※3

Remove the short-circuit between indoor terminal block [N] and [3].
Reconnect the indoor/ outdoor connecting wire.
Turn ON the power supply(Indoor unit).
Press the EMERGENCY OPERATION switch.
Is there amplitude of 5 to 10V DC between outdoor terminal block [N] and [3] after 3 minutes (for confirmation of serial signal)?

No → Replace the indoor/ outdoor connecting wire.

Yes

Is there 230V AC between outdoor terminal block [2] and [N]?

No → Replace the indoor/ outdoor connecting wire.

Yes

1. Turn OFF the power supply.
2. Disconnect the connector (CN61) between the compressor and the power transistor module.
3. Turn ON the power supply.
4. Press the EMERGENCY OPERATION switch.

Is there voltage approximate 280V DC between LD61A (+) and LD66A (–) on the inverter P.C. board arter 3 minutes?

Yes → ※4 Replace the inverter P.C. board.

No

Turn OFF the power supply and then turn ON again.
Press EMERGENCY OPERATION switch.
After 3 minutes, is there approximate 230V AC between outdoor terminal block [2] and [N]?

Yes

No

Replace the indoor/ outdoor connecting wire.

※ Short circuit of JPG and JPS on the indoor electronic control P.C. board enables self-check to be displayed in 3 seconds.

※2 Mis-wiring may damage indoor electronic control P.C. board during the operation. Be sure to confirm the wiring is correct before the operation starts.

※3 Be sure to release the failure-mode recall function after checking.
Procedure of release of failure-mode.
① Press the EMERGENCY OPERATION switch.
② Turn OFF the power supply.
③ Press the RESET button on the remote controller.

A
· Turn OFF inverter-controlled lighting equipment.
· Turn OFF the power supply and then turn ON again(Indoor unit).
· Press the EMERGENCY OPERATION switch.

Is mis-wiring indicated when the contactor (52C) on the indoor electronic control P.C. board turns ON 3 minutes later?

No → · Reinstall either the unit or the light each other away.
· Attach a filter on receiving section of the indoor unit.

Yes

B

※4 Be careful to the residual voltage of smoothing capacitor.
As for outdoor units MUZ-A12YV and MUZ-A12YVH, refer to service manual OB328 REVISED EDITION-A.

MCFZ-A18WV
MCFZ-A24WV

Start

• Turn ON the power supply (Indoor/ outdoor unit).
• Press once EMERGENCY OPERATION switch.

After 3 minutes, mis-wiring is indicated (0.5-second ON, 0.5-second OFF) on OPERATION INDICATOR lamp on the indoor unit.※

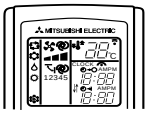
※ Short circuit of JPG and JPS on the indoor electronic control P.C. board enables self-check to be displayed in 3 seconds.

Is there any mis-wiring, poor contact, or wire disconnection? ※2

Yes → Make them sure.

No

A



B

Turn OFF the power supply (Indoor/ outdoor unit).
Disconnect the indoor/ outdoor connecting wire.
Short-circuit indoor terminal block [N] and [3].
Turn ON the power supply (Indoor/ outdoor unit).
During pressing both the OPERATION SELECT button and TOO COOL button on the remote controller at the same time, press the RESET button.
At first, release the RESET button.
And release the other two buttons since all LCD in operation display section of the remote controller is displayed after 3 seconds.
Transmit the signal of remote controller, pressing OPERATE/STOP (ON/OFF) button on the remote controller.
(The above procedure allows OPERATION INDICATOR lamp to indicate the failure-mode.)

※2 Mis-wiring may damage indoor electronic control P.C. board during the operation. Be sure to confirm the wiring is correct before the operation starts.

•The following indication applies regardless of shape of the indicator.

Blinking

Operation Indicator

Does the right side of OPERATION INDICATOR lamp blink quickly?

No (light up or OFF) → Replace the indoor electronic control P.C. board.

Yes

Release the failure mode. ※3

Remove the short-circuit between indoor terminal block [N] and [3].
Reconnect the indoor/ outdoor connecting wire.
Turn ON the power supply (Indoor/ outdoor unit).
Press the EMERGENCY OPERATION switch.
Is there amplitude of 5 to 10V DC between outdoor terminal block [N] and [3] after 3 minutes (for confirmation of serial signal)?

No → Replace the indoor/ outdoor connecting wire.

Yes

Is there 230V AC between outdoor terminal block [L] and [N]?

No → Reconnect the power supply cable.

Yes

Is there 325V DC between CN801 ① and ③ on the outdoor electronic control P.C. board?

No → Check of power supply.

Yes

Replace the outdoor electronic control P.C. board.

※3 Be sure to release the failure-mode recall function after checking.
Procedure of release of failure-mode.
① Press the EMERGENCY OPERATION switch.
② Turn OFF the power supply (Indoor/ outdoor unit).
③ Press the RESET button on the remote controller.

A

· Turn OFF inverter-controlled lighting equipment.
· Turn OFF the power supply and then turn ON again (Indoor/ outdoor unit).
· Press the EMERGENCY OPERATION switch.

After 3 minutes, is mis-wiring indicated on OPERATION INDICATOR lamp on the indoor unit?

No →
· Reinstall either the unit or the light each other away.
· Attach a filter on receiving section of the indoor unit.

Yes

B

As for outdoor units MUZ-A18YV and MUZ-A24YV, refer to service manual OB346 REVISED EDITION-A.

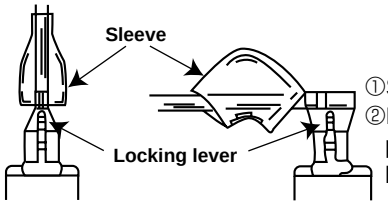
9 DISASSEMBLY INSTRUCTIONS

<"Terminal with lock mechanism" Detaching points>

In case of terminal with lock mechanism, detach the terminal as shown below.
There are two types (Refer to (1) and (2)) of the terminal with lock mechanism.
The terminal with no lock mechanism can be removed by pulling it out.
Check the shape of the terminal and work.

Slide the sleeve and check if there is a locking lever or not.



①Slide the sleeve.
②Pull the terminal while pushing the locking lever.

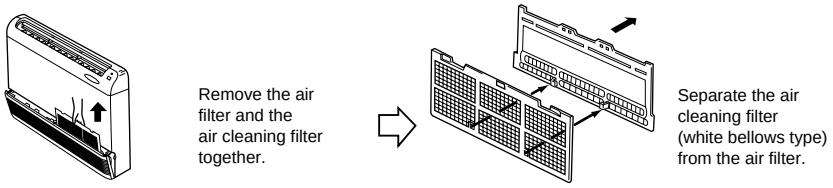
11 OPTIONAL PARTS

MCFZ-A12WV -E1 MCFZ-A18WV -E1 MCFZ-A24WV -E1

11-1. AIR CLEANING FILTER

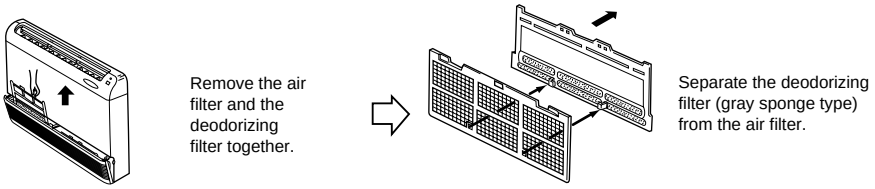
- If the air cleaning filter is clogged, it may lower the unit's capacity or cause condensation at the air outlet.
- The air cleaning filter is disposable. The standard usable term is about 4 months. However, if the color of the filter turns to dark brown, replace soon.



Models	Part No.
MCFZ-A12WV -E1 **MCFZ-A18WV -E1** **MCFZ-A24WV -E1**	MAC - 1200 FT

11-2. DEODORIZING FILTER

- Clean the filter every two weeks. When it becomes too dirt, clean it more often.
- Replace the filter with a new one when its color can not be restored even after washing or when the filter becomes dark.
- Standard interval for the filter replacement is about 1 year.



Models	Part No.
MCFZ-A12WV -E1 **MCFZ-A18WV -E1** **MCFZ-A24WV -E1**	MAC - 1700 DF
