MITSUBISHI ELECTRIC

SPLIT-TYPE AIR CONDITIONERS

Revision P:
- Setting when using piping has been added (11-9.).
- Some descriptions have been modified.

OBH790 REVISED EDITION-N is void.

CONTENTS

PARTS CATALOG (OBB790)

Use the specified refrigerant only

Never use any refrigerant other than that specified.

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.
Correct refrigerant is specified in the manuals and on the spec labels provided with our products.
We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

<Preparation before the repair service>

- Prepare the proper tools.
- Prepare the proper protectors.
- Provide adequate ventilation.
- After stopping the operation of the air conditioner, turn off the power-supply breaker and pull the power plug.
- Discharge the capacitor before the work involving the electric parts.

<Precautions during the repair service>

- Do not perform the work involving the electric parts with wet hands.
- Do not pour water into the electric parts.
- Do not touch the refrigerant.
- Do not touch the hot or cold areas in the refrigeration cycle.
- When the repair or the inspection of the circuit needs to be done without turning off the power, exercise great caution not to touch the live parts.

⚠ WARNING

- **When the refrigerant circuit has a leak, do not execute pump down with the compressor.**
- **When pumping down the refrigerant, stop the compressor before disconnecting the refrigerant pipes. The compressor may burst if air etc. get into it.**
- **When opening or closing the valve below freezing temperatures, refrigerant may spurt out from the gap between the valve stem and the valve body, resulting in injuries.**

Revision A:
• MXZ-3F54VF-[E2], [ET2], MXZ-3F68VF-[E2], [ET2] and MXZ-4F72VF-[E2], [ET2] have been added.

Revision B:
• MXZ-3F54VF2-[E1], [ET1], MXZ-3F68VF2-[E1], [ET1], MXZ-4F72VF2-[E1], [ET1] and MXZ-4F80VF2-[E1], [ET1] have been added.

Revision C:
• MXZ-2F33VF2-[E1], [ET1], MXZ-2F42VF2-[E1], [ET1], MXZ-2F53VF2-[E1], [ET1] and MXZ-2F53VFH2-[E1] have been added.

Revision D:
• MXZ-2F33VF3-[E1], [ET1], MXZ-2F42VF3-[E1], [ET1], MXZ-2F53VF3-[E1], [ET1], MXZ-2F53VFH3-[E1], MXZ-3F54VF3-[E1], [ET1], MXZ-3F68VF3-[E1], [ET1], MXZ-4F72VF3-[E1], [ET1] and MXZ-4F80VF3-[E1], [ET1] have been added.

Revision E:
• MXZ-4F83VF-[E1], [ET1], MXZ-5F102VF-[E1], [ET1], MXZ-6F122VF-[E1], [ET1], MXZ-2F53VFHZ-[E1] and MXZ-4F83VFHZ-[E1] have been added.

Revision F:
• Chart of heating capacity and total input for MXZ-4F83VFHZ-[E1] have been added.
• Outdoor unit power supply for MXZ-4F83VF-[ET1] and MXZ-5F102VF-[ET1] have been added.

Revision G:
• MXZ-2F33/42/53VF3-[E2] and MXZ-2F53VFH3-[E2] have been added.

Revision H:
• MXZ-2F33/42/53VF3-[ER1], MXZ-3F54/68VF3-[ER1], MXZ-4F72VF3-[ER1], MXZ-4F83VF-[ER1], MXZ-5F102VF-[ER1], MXZ-6F122VF-[ER1], MXZ-2F53VFHZ-[ER1] and MXZ-4F83VFHZ-[ER1] have been added.

Revision J:
• MXZ-3F54VF3-[E2], [ET2], [ER2] have been added.

Revision K:
• INDOOR / OUTDOOR UNIT COMPATIBILITY TABLE has been modified.

Revision L:
• MXZ-2F33/42/53VF4-[E1], [ET1], MXZ-2F53VFH4-[E1], MXZ-3F54/68VF4-[E1], [ET1], MXZ-4F72/80VF4-[E1], [ET1], MXZ-4F83VF2-[E1], [ET1], MXZ-5F102VF2-[E1], [ET1], MXZ-6F120VF2-[E1], [ET1], MXZ-2F53VFHZ2-[E1] and MXZ-4F83VFHZ2-[E1] have been added.

Revision M:
• 8. REFRIGERANT SYSTEM DIAGRAM has been corrected.

Revision N:
• INDOOR / OUTDOOR UNIT COMPATIBILITY TABLE has been modified.

Revision P:
• Setting when using piping has been added (11-9.).
• Some descriptions have been modified.

INDOOR / OUTDOOR UNIT COMPATIBILITY TABLE

<MXZ-2F33VF>

Connectable indoor unit lineups (Heat pump inverter type)												
Model type	Model name	Capacity class [kW/h]										
		15	18	20	22	25	35	42	50	60	71	
Wall mounted	MSZ-LN**VG		●			●

1. New model

2 SAFETY PRECAUTION

MEANINGS OF SYMBOLS DISPLAYED ON THE UNIT

	**WARNING** (Risk of fire)	This mark is for R32 refrigerant only. Refrigerant type is written on nameplate of outdoor unit. In case that refrigerant type is R32, this unit uses a flammable refrigerant. If refrigerant leaks and comes in contact with fire or heating part, it will create harmful gas and there is risk of fire.
	Read the OPERATION MANUAL carefully before operation.	
	Service personnel are required to carefully read the OPERATION MANUAL and INSTALLATION MANUAL before operation.	
	Further information is available in the OPERATION MANUAL, INSTALLATION MANUAL, and the like.	

2-1. ALWAYS OBSERVE FOR SAFETY

Before obtaining access to terminal, all supply circuits must be disconnected.

2-2. CAUTIONS RELATED TO NEW REFRIGERANT

Cautions for units utilizing refrigerant R32

Preparation before the repair service.

- Prepare the proper tools.
- Prepare the proper protectors.
- Provide adequate ventilation.
- After stopping the operation of the air conditioner, turn off the power-supply breaker.
- Discharge the condenser before the work involving the electric parts.

Use new refrigerant pipes.

In case of using the existing pipes for R22, be careful with the following.

· Be sure to clean the pipes and make sure that the insides of the pipes are clean.
· Change flare nut to the one provided with this product. Use a newly flared pipe.
· Avoid using thin pipes.

Make sure that the inside and outside of refrigerant piping is clean and it has no contaminants such as sulfur, oxides, dirt, shaving particles, etc, which are hazard to refrigerant cycle.
In addition, use pipes with specified thickness.

Contamination inside refrigerant piping can cause deterioration of refrigerant oil, etc.

Store the piping indoors, and both ends of the piping sealed until just before brazing.
(Leave elbow joints, etc. in their packaging.)

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

Precautions during the repair service.

- Do not perform the work involving the electric parts with wet hands.
- Do not pour water into the electric parts.
- Do not touch the refrigerant.
- Do not touch the hot or cold areas in the refrigerating cycle.
- When the repair or the inspection of the circuit needs to be done without turning off the power, exercise great caution not to touch the live parts.
- When opening or closing the valve below freezing temperatures, refrigerant may spurt out from the valve gap, resulting in injuries.

Use a vacuum pump with a reverse flow check valve.

Vacuum pump oil may flow back into refrigerant cycle and that can cause deterioration of refrigerant oil, etc.

Use the following tools specifically designed for use with R32 refrigerant.

The following tools are necessary to use R32 refrigerant.

Tools for R32	
Gauge manifold	Flare tool
Charge hose	Size adjustment gauge
Gas leak detector	Vacuum pump adaptor
Torque wrench	Electronic refrigerant charging scale

Handle tools with care.

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

The refrigerant oil applied to flare and flange connections must be ester oil, ether oil or alkylbenzene oil in a small amount.

If large amount of mineral oil enters, that can cause deterioration of refrigerant oil, etc.

Do not use refrigerant other than R32.

If other refrigerant (R22, etc.) is used, chlorine in refrigerant can cause deterioration of refrigerant oil, etc.

Use the specified refrigerant only.

Never use any refrigerant other than that specified.
Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.
Correct refrigerant is specified in the manuals and on the spec labels provided with our products.
We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

Ventilate the room if refrigerant leaks during operation. If refrigerant comes into contact with a flame, poisonous gases will be released.

[1] Warning for service

(1) Do not alter the unit.
(2) For installation and relocation work, follow the instructions in the Installation Manual and use tools and pipe components specifically made for use with refrigerant specified in the outdoor unit installation manual.
(3) Ask a dealer or an authorized technician to install, relocate and repair the unit.
For appliances not accessible to the general public.
(4) Refrigerant pipe connections shall be accessible for maintenance purposes.
(5) If the air conditioner is installed in a small room or closed room, measures must be taken to prevent the refrigerant concentration in the room from exceeding the safety limit in the event of refrigerant leakage. Should the refrigerant leak and cause the concentration limit to be exceeded, hazards due to lack of oxygen in the room may result.
(6) Keep gas-burning appliances, electric heaters, and other fire sources (ignition sources) away from the location where installation, repair, and other air conditioner work will be performed.
If refrigerant comes into contact with a flame, poisonous gases will be released.
(7) When installing, relocating, or servicing the air conditioner, use only the specified refrigerant (R32) to charge the refrigerant lines.
Do not mix it with any other refrigerant and do not allow air to remain in the lines.
If air is mixed with the refrigerant, then it can be the cause of abnormal high pressure in the refrigerant line, and may result in an explosion and other hazards.
(8) After installation has been completed, check for refrigerant leaks. If refrigerant leaks into the room and comes into contact with the flame of a heater or portable cooking range, poisonous gases will be released.
(9) Do not use low temperature solder alloy in case of brazing the refrigerant pipes.
(10) When performing brazing work, be sure to ventilate the room sufficiently. Make sure that there are no hazardous or flammable materials nearby.
When performing the work in a closed room, small room, or similar location, make sure that there are no refrigerant leaks before performing the work.
If refrigerant leaks and accumulates, it may ignite or poisonous gases may be released.
(11) Do not install the unit in places where refrigerant may build-up or places with poor ventilation such as a semi-basement or a sunken place in outdoor: Refrigerant is heavier than air, and inclined to fall away from the leak source.
(12) Do not use means to accelerate the defrosting process or to clean, other than those recommended by the manufacturer.
(13) The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).
(14) Do not pierce or burn.
(15) Be aware that refrigerants may not contain an odor.
(16) Pipe-work shall be protected from physical damage.
(17) The installation of pipe-work shall be kept to a minimum.
(18) Compliance with national gas regulations shall be observed.
(19) Keep any required ventilation openings clear of obstruction.
(20) Servicing shall be performed only as recommended by the manufacturer.
(21) The appliance shall be stored in a well-ventilated area where the room size corresponds to the necessary room size to meet safety requirements.
(22) Maintenance, service and repair operations shall be performed by authorized technician with required qualification.
(23) Be sure to have appropriate ventilation in order to prevent ignition. Furthermore, be sure to carry out fire prevention measures that there are no dangerous or flammable objects in the surrounding area.

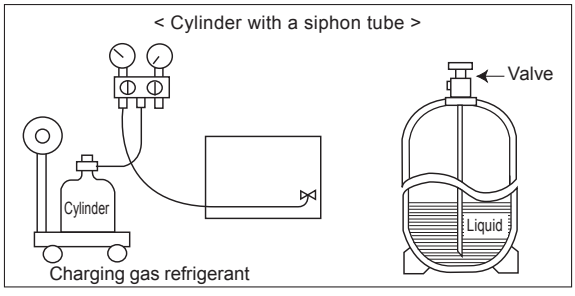
[2] Cautions for service

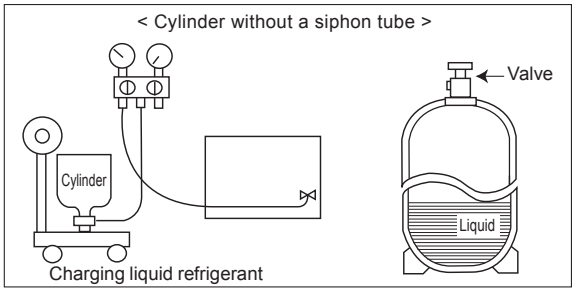
(1) Perform service after recovering the refrigerant left in unit completely.
(2) Do not release refrigerant in the air.
(3) After completing service, charge the system with specified amount of refrigerant.
(4) When performing service, install a filter drier simultaneously.
Be sure to use a filter drier for new refrigerant.

[3] Additional refrigerant charge

When charging directly from cylinder

R32 is a single refrigerant and its composition does not change. Therefore, both liquid charging and gas charging are possible. Liquid charging of refrigerant all at once from the low-pressure side may cause the compressor malfunction. Accordingly, make sure that charging is gradual.





[4] Cautions for unit using R32 refrigerant

Basic work procedures are the same as those for conventional units using refrigerant R410A. However, pay careful attention to the following points.

(1) Information on servicing

(1-1) Checks on the Area

Prior to beginning work on systems containing flammable refrigerants, safety checks are necessary to ensure that the risk of ignition is minimized.

For repair to the refrigerating systems, (1-3) to (1-7) shall be completed prior to conducting work on the systems.

(1-2) Work Procedure

Work shall be undertaken under a controlled procedure so as to minimize the risk of a flammable gas or vapor being present while the work is being performed.

(1-3) General Work Area

All maintenance staff and others working in the local area shall be instructed on the nature of work being carried out. Work in confined spaces shall be avoided. The area around the workspace shall be sectioned off. Ensure that the conditions within the area have been made safe by control of flammable material.

(1-4) Checking for Presence of Refrigerant

The area shall be checked with an appropriate refrigerant detector prior to and during work, to ensure the technician is aware of potentially toxic or flammable atmospheres. Ensure that the leak detection equipment being used is suitable for use with all applicable refrigerants, i.e. non-sparking, adequately sealed or intrinsically safe.

(1-5) Presence of Fire Extinguisher

If any hot work is to be conducted on the refrigeration equipment or any associated parts, appropriate fire extinguishing equipment shall be available at hand.

Have a dry powder or CO2 fire extinguisher adjacent to the charging area.

(1-6) No Ignition Sources

No person carrying out work in relation to a refrigeration system which involves exposing any pipe work shall use any sources of ignition in such a manner that it may lead to the risk of fire or explosion. All possible ignition sources, including cigarette smoking, should be kept sufficiently far away from the site of installation, repairing, removing and disposal, during which refrigerant can possibly be released to the surrounding space. Prior to work taking place, the area around the equipment is to be surveyed to make sure that there are no flammable hazards or ignition risks. “No Smoking” signs shall be displayed.

(1-7) Ventilated Area

Ensure that the area is in the open or that it is adequately ventilated before breaking into the system or conducting any hot work. A degree of ventilation shall continue during the period that the work is carried out. The ventilation should safely disperse any released refrigerant and preferably expel it externally into the atmosphere.

(1-8) Checks on the Refrigeration Equipment

Where electrical components are being changed, they shall be fit for the purpose and to the correct specification. At all times the manufacturer’s maintenance and service guidelines shall be followed. If in doubt, consult the manufacturer’s technical department for assistance.

The following checks shall be applied to installations using flammable refrigerants:

- The charge size is in accordance with the room size within which the refrigerant containing parts are installed.
- The ventilation machinery and outlets are operating adequately and are not obstructed.
- Marking to the equipment continues to be visible and legible. Markings and signs that are illegible shall be corrected.
- Refrigeration pipe or components are installed in a position where they are unlikely to be exposed to any substance which may corrode refrigerant containing components, unless the components are constructed of materials which are inherently resistant to being corroded or are suitably protected against being corroded.

(1-9) Checks on Electrical Devices

Repair and maintenance to electrical components shall include initial safety checks and component inspection procedures. If a fault exists that could compromise safety, then no electrical supply shall be connected to the circuit until it is satisfactorily dealt with. If the fault cannot be corrected immediately but it is necessary to continue operation, an adequate temporary solution shall be used. This shall be reported to the owner of the equipment so all parties are advised.

Initial safety checks shall include that:

- capacitors are discharged: this shall be done in a safe manner to avoid possibility of sparking;
- no live electrical components and wiring are exposed while charging, recovering or purging the system;
- there is continuity of earth bonding

(2) Repairs to Sealed Components

(2-1) During repairs to sealed components, all electrical supplies shall be disconnected from the equipment being worked on prior to any removal of sealed covers, etc. If it is absolutely necessary to have an electrical supply to equipment during servicing, then a permanently operating form of leak detection shall be located at the most critical point to warn of a potentially hazardous situation.

(2-2) Particular attention shall be paid to the following to ensure that by working on electrical components, the casing is not altered in such a way that the level of protection is affected. This shall include damage to cables, excessive number of connections, terminals not made to original specification, damage to seals, incorrect fitting of glands, etc.

Ensure that the apparatus is mounted securely.

Ensure that seals or sealing materials have not degraded to the point that they no longer serve the purpose of preventing the ingress of flammable atmospheres.

Replacement parts shall be in accordance with the manufacturer’s specifications.

(3) Repair to intrinsically Safe Components
Do not apply any permanent inductive or capacitance loads to the circuit without ensuring that this will not exceed the permissible voltage and current permitted for the equipment in use.
Intrinsically safe components are the only types that can be worked on while live in the presence of a flammable atmosphere. The test apparatus shall be at the correct rating.
Replace components only with parts specified by the manufacturer. Other parts may result in the ignition of refrigerant in the atmosphere from a leak.

(4) Cabling
Check that cabling will not be subject to wear, corrosion, excessive pressure, vibration, sharp edges or any other adverse environmental effects. The check shall also take into account the effects of aging or continual vibration from sources such as compressors or fans.

(5) Detection of Flammable Refrigerants
Under no circumstances shall potential sources of ignition be used in the searching for or detection of refrigerant leaks.
A halide torch (or any other detector using a naked flame) shall not be used.

(6) Leak Detection Methods
Electronic leak detectors may be used to detect refrigerant leaks but, in the case of flammable refrigerants, the sensitivity may not be adequate, or may need re-calibration. (Detection equipment shall be calibrated in a refrigerant-free area.)
Ensure that the detector is not a potential source of ignition and is suitable for the refrigerant used. Leak detection equipment shall be set at a percentage of the LFL of the refrigerant and shall be calibrated to the refrigerant employed, and the appropriate percentage of gas (25% maximum) is confirmed.
Leak detection fluids are suitable for use with most refrigerants but the use of detergents containing chlorine shall be avoided as the chlorine may react with the refrigerant and corrode the copper pipe-work.
If a leak is suspected, all naked flames shall be removed/extinguished.
If a leakage of refrigerant is found which requires brazing, all of the refrigerant shall be recovered from the system, or isolated (by means of shut off valves) in a part of the system remote from the leak. For appliances containing flammable refrigerants, oxygen free nitrogen (OFN) shall then be purged through the system both before and during the brazing process.

(7) Removal and Evacuation
When breaking into the refrigerant circuit to make repairs – or for any other purpose conventional procedures shall be used. However, for flammable refrigerants it is important that best practice is followed since flammability is a consideration.
The following procedure shall be adhered to:
- remove refrigerant
- purge the circuit with inert gas
- evacuate
- purge again with inert gas
- open the circuit by cutting or brazing.

The refrigerant charge shall be recovered into the correct recovery cylinders. For appliances containing flammable refrigerants, the system shall be “flushed” with OFN to render the unit safe. This process may need to be repeated several times.
Compressed air or oxygen shall not be used for purging refrigerant systems.
For appliances containing flammable refrigerants, flushing shall be achieved by breaking the vacuum in the system with OFN and continuing to fill until the working pressure is achieved, then venting to atmosphere, and finally pulling down to a vacuum. This process shall be repeated until no refrigerant is within the system. When the final OFN charge is used, the system shall be vented down to atmospheric pressure to enable work to take place. This operation is absolutely vital if brazing operations on the pipe-work are to take place.
Ensure that the outlet for the vacuum pump is not close to any ignition sources and that ventilation is available.

(8) Charging Procedures
In addition to conventional charging procedures, the following requirements shall be followed:
- Ensure that contamination of different refrigerants does not occur when using charging equipment. Hoses or lines shall be as short as possible to minimize the amount of refrigerant contained in them.
- Cylinders shall be kept upright.
- Ensure that the refrigeration system is earthed prior to charging the system with refrigerant.
- Label the system when charging is complete (if not already).
- Extreme care shall be taken not to overfill the refrigeration system.

Prior to recharging the system, it shall be pressure-tested with the appropriate purging gas. The system shall be leak-tested on completion of charging but prior to commissioning. A follow up leak test shall be carried out prior to leaving the site.

(9) Decommissioning
Before carrying out this procedure, it is essential that the technician is completely familiar with the equipment and all its detail. It is recommended good practice that all refrigerants are recovered safely. Prior to the task being carried out, an oil and refrigerant sample shall be taken in case analysis is required prior to re-use of reclaimed refrigerant. It is essential that electrical power is available before the task is commenced.
(9-1) Become familiar with the equipment and its operation.

(9-2) Isolate system electrically.
(9-3) Before attempting the procedure, ensure that:
- mechanical handling equipment is available, if required, for handling refrigerant cylinders;
- all personal protective equipment is available and being used correctly;
- the recovery process is supervised at all times by a competent person;
- recovery equipment and cylinders conform to the appropriate standards.

(9-4) Pump down refrigerant system, if possible.
(9-5) If a vacuum is not possible, make a manifold so that refrigerant can be removed from various parts of the system.
(9-6) Make sure that cylinder is situated on the scales before recovery takes place.
(9-7) Start the recovery machine and operate in accordance with manufacturer's instructions.
(9-8) Do not overfill cylinders. (No more than 80 % volume liquid charge).
(9-9) Do not exceed the maximum working pressure of the cylinder, even temporarily.
(9-10) When the cylinders have been filled correctly and the process completed, make sure that the cylinders and the equipment are removed from site promptly and all isolation valves on the equipment are closed off.
(9-11) Recovered refrigerant shall not be charged into another refrigeration system unless it has been cleaned and checked.

(10) Labelling

Equipment shall be labelled stating that it has been de-commissioned and emptied of refrigerant. The label shall be dated and signed. For appliances containing flammable refrigerants, ensure that there are labels on the equipment stating the equipment contains flammable refrigerant.

(11) Recovery

When removing refrigerant from a system, either for servicing or decommissioning, it is recommended good practice that all refrigerants are removed safely. When transferring refrigerant into cylinders, ensure that only appropriate refrigerant recovery cylinders are employed. Ensure that the correct number of cylinders for holding the total system charge are available. All cylinders to be used are designated for the recovered refrigerant and labelled for that refrigerant (i.e. special cylinders for the recovery of refrigerant). Cylinders shall be complete with pressure-relief valve and associated shut-off valves in good working order. Empty recovery cylinders are evacuated and, if possible, cooled before recovery occurs. The recovery equipment shall be in good working order with a set of instructions concerning the equipment that is at hand and shall be suitable for the recovery of all appropriate refrigerants including, when applicable, flammable refrigerants. In addition, a set of calibrated weighing scales shall be available and in good working order. Hoses shall be complete with leak-free disconnect couplings and in good condition. Before using the recovery machine, check that it is in satisfactory working order, has been properly maintained and that any associated electrical components are sealed to prevent ignition in the event of a refrigerant release. Consult manufacturer if in doubt.

The recovered refrigerant shall be returned to the refrigerant supplier in the correct recovery cylinder, and the relevant waste transfer note arranged. Do not mix refrigerants in recovery units and especially not in cylinders. If compressors or compressor oils are to be removed, ensure that they have been evacuated to an acceptable level to make certain that flammable refrigerant does not remain within the lubricant. The evacuation process shall be carried out prior to returning the compressor to the suppliers. Only electric heating to the compressor body shall be employed to accelerate this process. When oil is drained from a system, it shall be carried out safely.

[5] Service tools

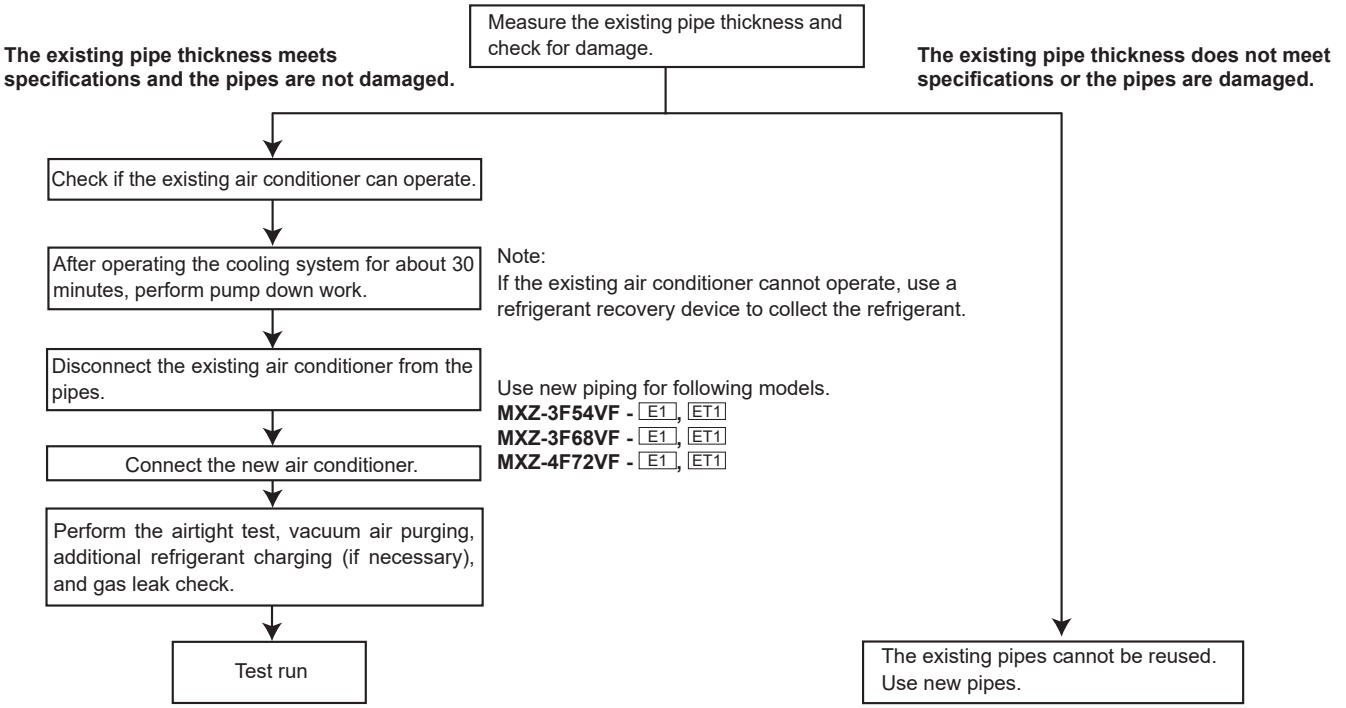
Use the below service tools as exclusive tools for R32 refrigerant.

No.	Tool name	Specifications
①	Gauge manifold	· Only for R32
		· Use the existing fitting specifications. (UNF1/2)
		· Use high-tension side pressure of 5.3MPa·G or over.
②	Charge hose	· Only for R32
		· Use pressure performance of 5.09MPa·G or over.
③	Electronic scale	—
④	Gas leak detector	· Use the detector for R134a, R407C, R410a or R32.
⑤	Adaptor for reverse flow check	· Attach on vacuum pump.
⑥	Refrigerant charge base	—
⑦	Refrigerant cylinder	· Only for R32 · Cylinder with syphon
⑧	Refrigerant recovery equipment	—

2-3. PRECAUTIONS WHEN REUSING EXISTING R22/R410a REFRIGERANT PIPES

(1) Flowchart

- Refer to the flowchart below to determine if the existing pipes can be used and if it is necessary to use a filter dryer.
- If the diameter of the existing pipes is different from the specified diameter, refer to technological data materials to confirm if the pipes can be used.



(2) Cautions for refrigerant piping work

New refrigerant R32 is adopted for replacement inverter series. Although the refrigerant piping work for R32 is same as for R22, exclusive tools are necessary so as not to mix with different kind of refrigerant. Furthermore as the working pressure of R32 is 1.6 times higher than that of R22, their sizes of flared sections and flare nuts are different.

① Thickness of pipes

Because the working pressure of R32 is higher compared to R22, be sure to use refrigerant piping with thickness shown below. (Never use pipes of 0.7 mm or below.)

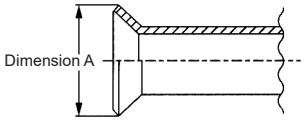
Diagram below: Piping diameter and thickness

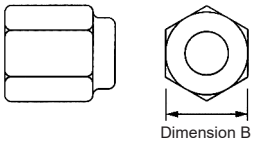
Nominal dimensions(inch)	Outside diameter (mm)	Thickness (mm)	
		R32/R410a	R22
1/4	6.35	0.8	0.8
3/8	9.52	0.8	0.8
1/2	12.70	0.8	0.8
5/8	15.88	1.0	1.0
3/4	19.05	—	1.0

② Dimensions of flare cutting and flare nut

The component molecules in HFC refrigerant are smaller compared to conventional refrigerants. In addition to that, R32 is a refrigerant, which has higher risk of leakage because its working pressure is higher than that of other refrigerants. Therefore, to enhance airtightness and strength, flare cutting dimension of copper pipe for R32 has been specified separately from the dimensions for other refrigerants as shown below. The dimension B of flare nut for R32 also has partly been changed to increase strength as shown below. Set copper pipe correctly referring to copper pipe flaring dimensions for R32 below. For 1/2 and 5/8 inch pipes, the dimension B changes.

Use torque wrench corresponding to each dimension.





Flare cutting dimensions

Nominal dimensions(inch)	Outside diameter(mm)	Dimension A ($^{+0}_{-0.4}$) (mm)	
		R32/R410a	R22
1/4	6.35	9.1	9.0
3/8	9.52	13.2	13.0
1/2	12.70	16.6	16.2
5/8	15.88	19.7	19.4
3/4	19.05	—	23.3

Flare nut dimensions

Nominal dimensions(inch)	Outside diameter(mm)	Dimension B (mm)	
		R32/R410a	R22
1/4	6.35	17.0	17.0
3/8	9.52	22.0	22.0
1/2	12.70	26.0	24.0
5/8	15.88	29.0	27.0
3/4	19.05	—	36.0

③ Tools for R32 (The following table shows whether conventional tools can be used or not.)

Tools and materials	Use	R32 tools	Can R22 tools be used?	Can R407C tools be used?	Can R410a tools be used?
Gauge manifold	Air purge, refrigerant charge and operation check	Tool exclusive for R32	×	×	○
Charge hose		Tool exclusive for R32	×	×	○

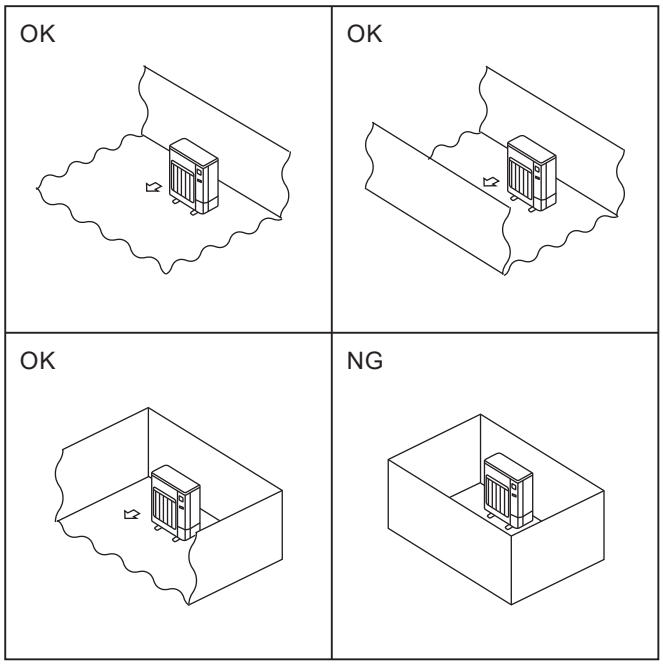
Bender	Bend the pipes	Tools for other refrigerants can be used	○	○	○
Pipe cutter	Cut the pipes	Tools for other refrigerants can be used	○	○	○
Welder and nitrogen gas cylinder	Weld the pipes	Tools for other refrigerants can be used	○	○	○
Refrigerant charging scale	Refrigerant charge	Tools for other refrigerants can be used	○	○	○
Vacuum gauge or thermistor vacuum gauge and vacuum valve	Check the degree of vacuum. (Vacuum valve prevents back flow of oil and refrigerant to thermistor vacuum gauge)	Tools for other refrigerants can be used	○	○	○
Charging cylinder	Refrigerant charge	Tool exclusive for R32	×	–	×

× : Prepare a new tool. (Use the new tool as the tool exclusive for R32.)
△ : Tools for other refrigerants can be used under certain conditions.
○ : Tools for other refrigerants can be used.

2-4. CHOOSING THE OUTDOOR UNIT INSTALLATION LOCATION



R32 is heavier than air—as well as other refrigerants—so tends to accumulate at the base (in the vicinity of the floor). If R32 accumulates around base, it may reach a flammable concentration in case room is small. To avoid ignition, maintaining a safe work environment is required by ensuring appropriate ventilation. If a refrigerant leak is confirmed in a room or an area where there is insufficient ventilation, refrain from using open flames until the work environment can be improved by ensuring appropriate ventilation.
Install outdoor unit in a place where at least one of the four sides is open, and in a sufficiently large space without depressions.

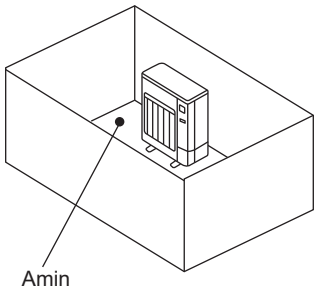
2-5. MINIMUM INSTALLATION AREA

If you unavoidably install a unit in a space where all four sides are blocked or there are depressions, confirm that one of these situations (A, B or C) is satisfied.

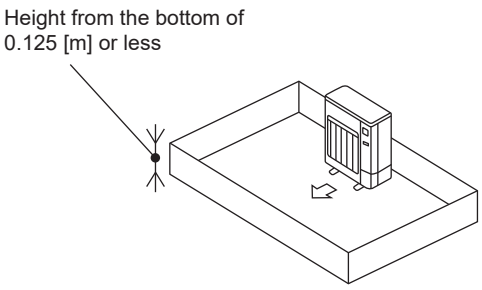
Note: These countermeasures are for keeping safety not for specification guarantee.

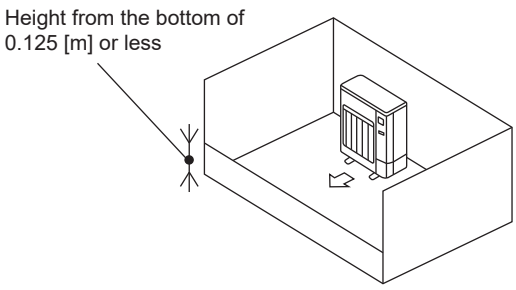
A) Secure sufficient installation space (minimum installation area Amin).
Install in a space with an installation area of Amin or more, corresponding to refrigerant quantity M (factory-charged refrigerant + locally added refrigerant).

M [kg]	Amin [m²]
1.0	12
1.5	17
2.0	23
2.5	28
3.0	34
3.5	39
4.0	45
4.5	50
5.0	56
5.5	62
6.0	67
6.5	73
7.0	78
7.5	84

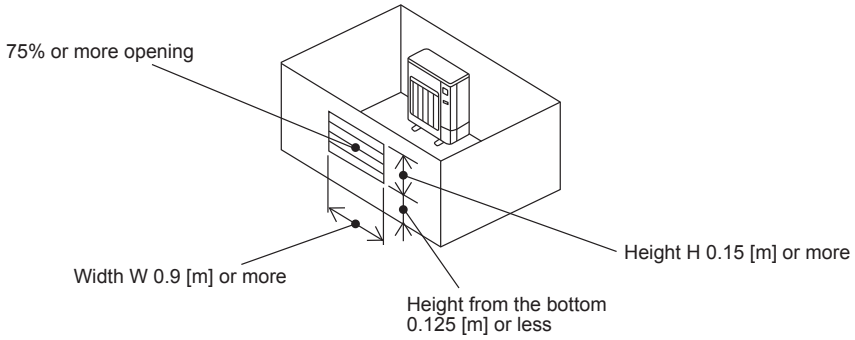


B) Install in a space with a depression height of 0.125 [m] or less.





C) Create an appropriate ventilation open area.
Make sure that the width of the open area is 0.9 [m] or more and the height of the open area is 0.15 [m] or more.
However, the height from the bottom of the installation space to the bottom edge of the open area should be 0.125 [m] or less.
Open area should be 75% or more opening.



■ Indoor units
Install in a room with a floor area of Amin or more, corresponding to refrigerant quantity M (factory-charged refrigerant + locally added refrigerant).
* For the factory-charged refrigerant amount, refer to the spec nameplate or installation manual.
For the amount to be added locally, refer to the installation manual.
Install the indoor unit so that the height from the floor to the bottom of the indoor unit is h0;
for wall mounted: 1.8 m or more;
for ceiling suspended, cassette and ceiling concealed: 2.2 m or more.
When installing floor standing, refer to indoor unit Installation manual.
There are restrictions in installation height for each model, so read the installation manual for the particular unit.

Case 1: for wall mounted, ceiling suspended, cassette and concealed

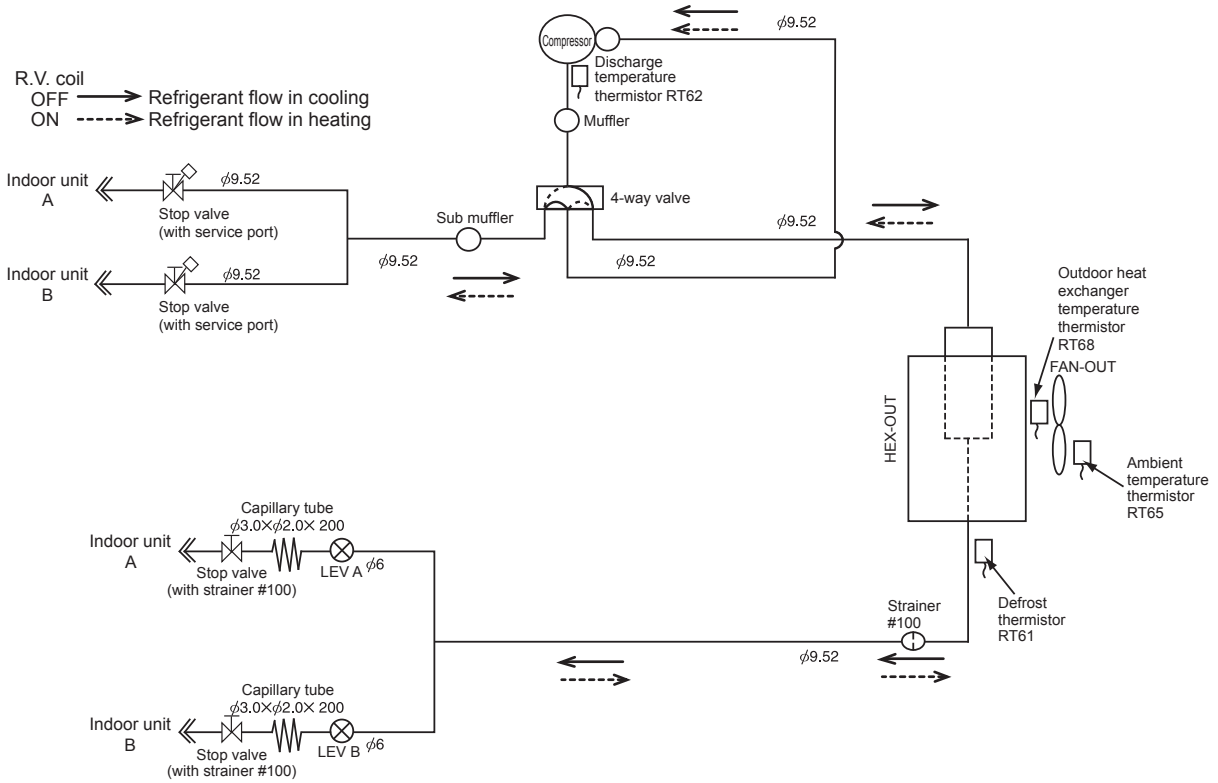
8 REFRIGERANT SYSTEM DIAGRAM

MXZ-2F33VF
MXZ-2F33VF2
MXZ-2F33VF3
MXZ-2F33VF4

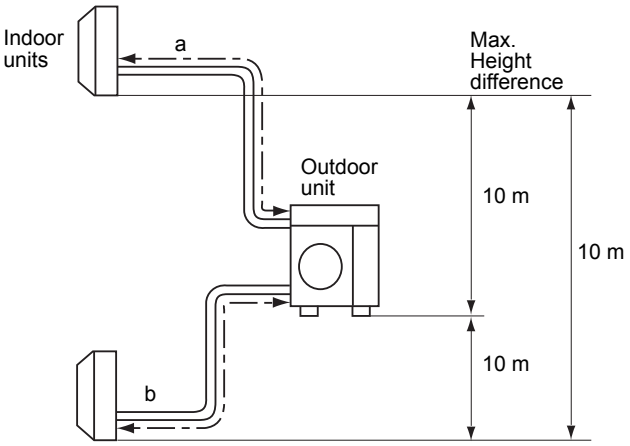
Unit: mm



MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b)	15 m
Total piping length (a+b)	20 m
Number of bends for each unit	15
Total number of bends	20

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

Model name	Outdoor unit precharged (g)	Refrigerant piping length (one way, 2 unit total)
		20 m
MXZ-2F33VF MXZ-2F33VF2	1,000	0
MXZ-2F33VF3 MXZ-2F33VF4	800	0

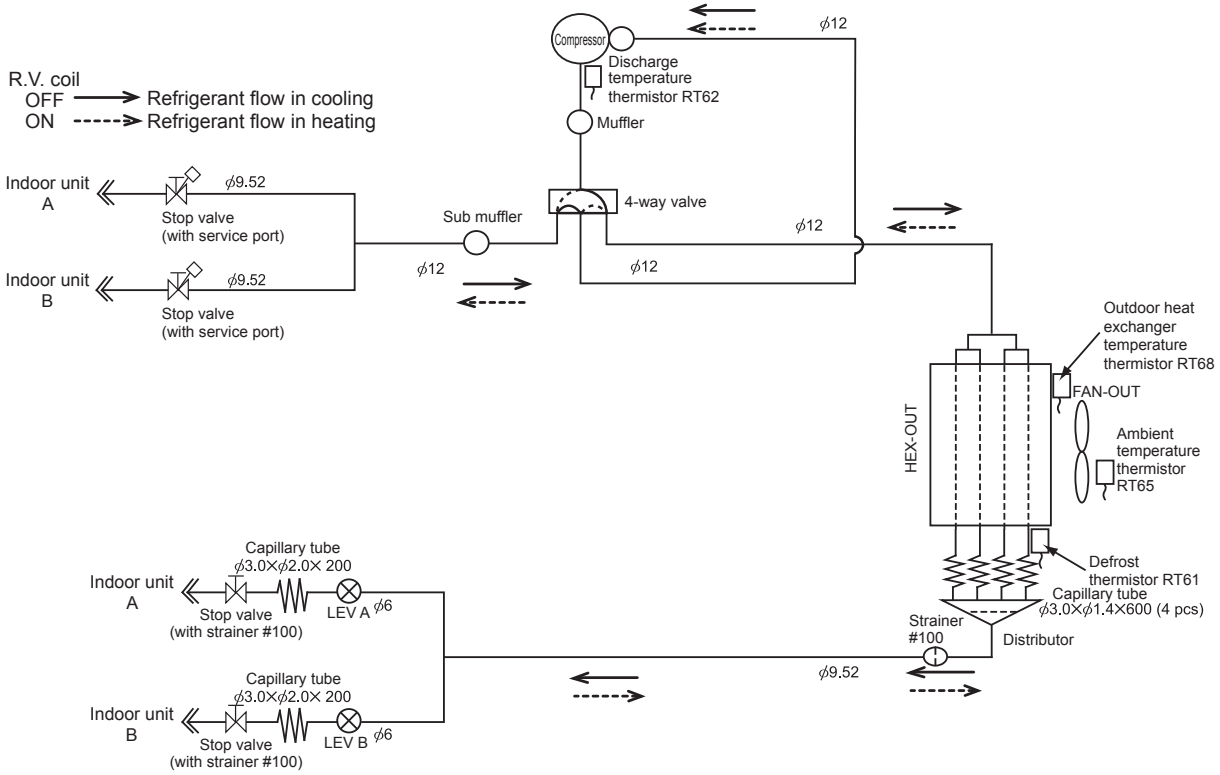
● Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the right table.

Unit: mm (inch)

Outdoor unit union diameter		
For		
Indoor unit A	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)

MXZ-2F42VF MXZ-2F53VF MXZ-2F53VFH
MXZ-2F42VF2 MXZ-2F53VF2 MXZ-2F53VFH2
MXZ-2F42VF3 MXZ-2F53VF3 MXZ-2F53VFH3
MXZ-2F42VF4 MXZ-2F53VF4 MXZ-2F53VFH4

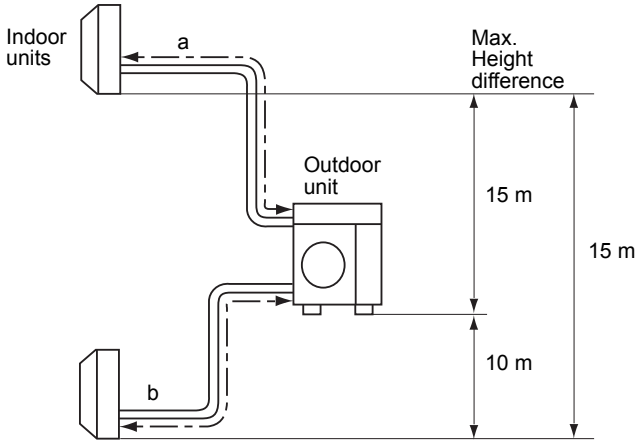
Unit: mm



MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b)	20 m
Total piping length (a+b)	30 m
Number of bends for each unit	20
Total number of bends	30

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

Model name	Outdoor unit precharged (g)	Refrigerant piping length (one way, 2 unit total)
		30 m
MXZ-2F42/53VF **MXZ-2F53VFH** **MXZ-2F42/53VF2** **MXZ-2F53VFH2**	1,200	0
MXZ-2F42/53VF3 **MXZ-2F53VFH3** **MXZ-2F42/53VF4** **MXZ-2F53VFH4**	1,000	0

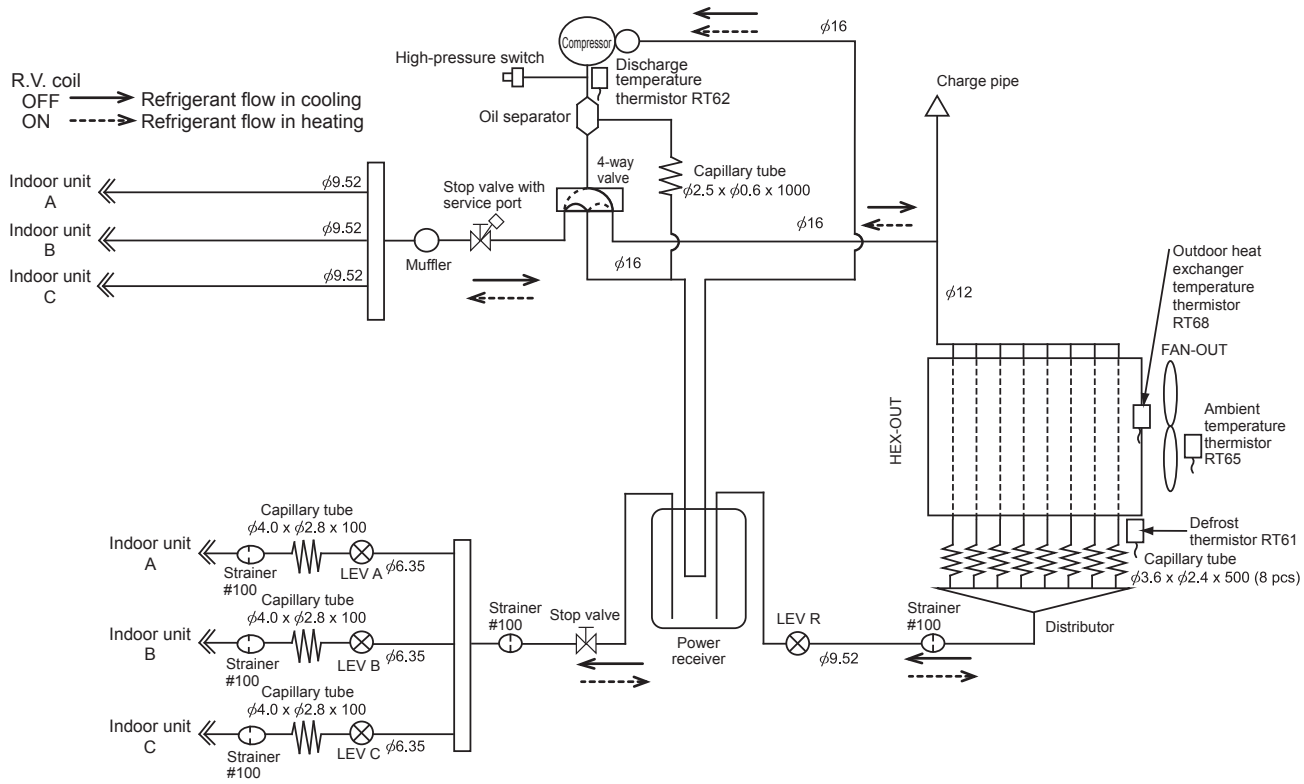
- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the right table.
- For **MXZ-2F53VF**, **MXZ-2F53VF2, MXZ-2F53VF3, MXZ-2F53VF4, MXZ-2F53VFH, MXZ-2F53VFH2, MXZ-2F53VFH3** and **MXZ-2F53VFH4** when diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe. For further information on Different-diameter pipe, refer to "PARTS CATALOG".

Unit: mm (inch)

Outdoor unit union diameter		
For		
Indoor unit A	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)

MXZ-3F54VF MXZ-3F54VF2 MXZ-3F54VF3 MXZ-3F54VF4

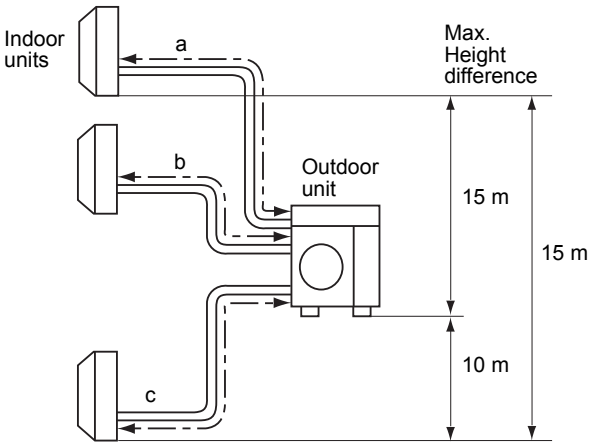
Unit: mm



MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b, c)	25 m
Total piping length (a+b+c)	50 m
Number of bends for each unit	25
Total number of bends	50

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

*Refer to "Method of charging refrigerant".

Model name	Outdoor unit precharged (g)	Refrigerant piping length (one way, 3 unit total)
		50 m
MXZ-3F54VF	1,400	0
MXZ-3F54VF2 **MXZ-3F54VF3** **MXZ-3F54VF4**	2,400	0

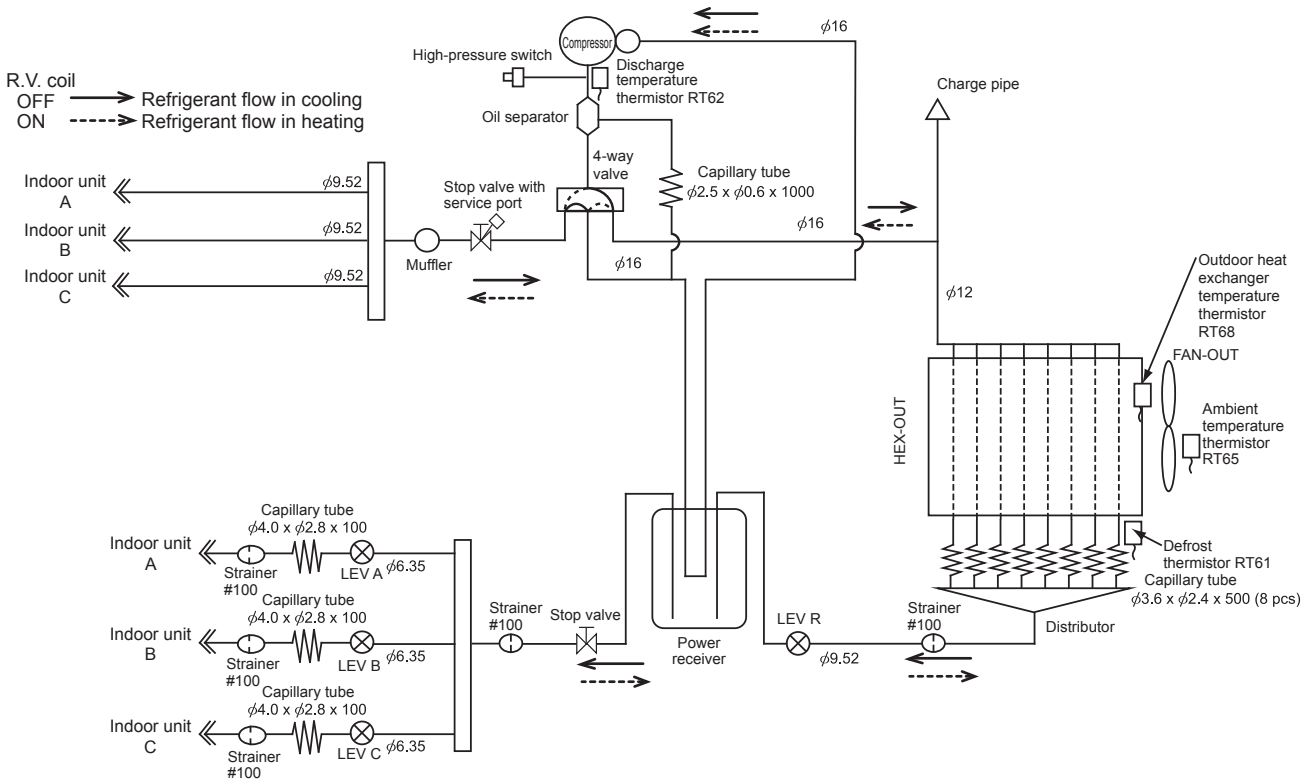
- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the right table.
- When diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe.
  For further information on Different-diameter pipe, refer to "PARTS CATALOG".

Unit: mm (inch)

Outdoor unit union diameter		
For		
Indoor unit A	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit C	Liquid	6.35(1/4)
	Gas	9.52(3/8)

MXZ-3F68VF MXZ-3F68VF2 MXZ-3F68VF3 MXZ-3F68VF4

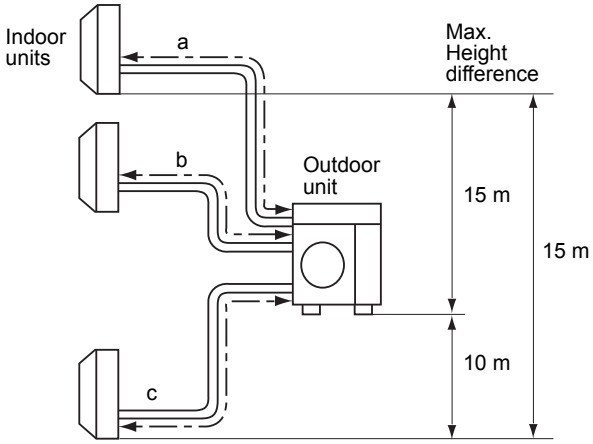
Unit: mm



MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b, c)	25 m
Total piping length (a+b+c)	60 m
Number of bends for each unit	25
Total number of bends	60

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

*Refer to "Method of charging refrigerant".

Model name	Outdoor unit precharged (g)	Refrigerant piping length (one way, 3 unit total)
		60 m
MXZ-3F68VF	1,400	0
MXZ-3F68VF2 **MXZ-3F68VF3** **MXZ-3F68VF4**	2,400	0

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the right table.
- When diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe.
  For further information on Different-diameter pipe, refer to "PARTS CATALOG".

Unit: mm (inch)

Outdoor unit union diameter		
For		
Indoor unit A	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)
Indoor unit C	Liquid	6.35(1/4)

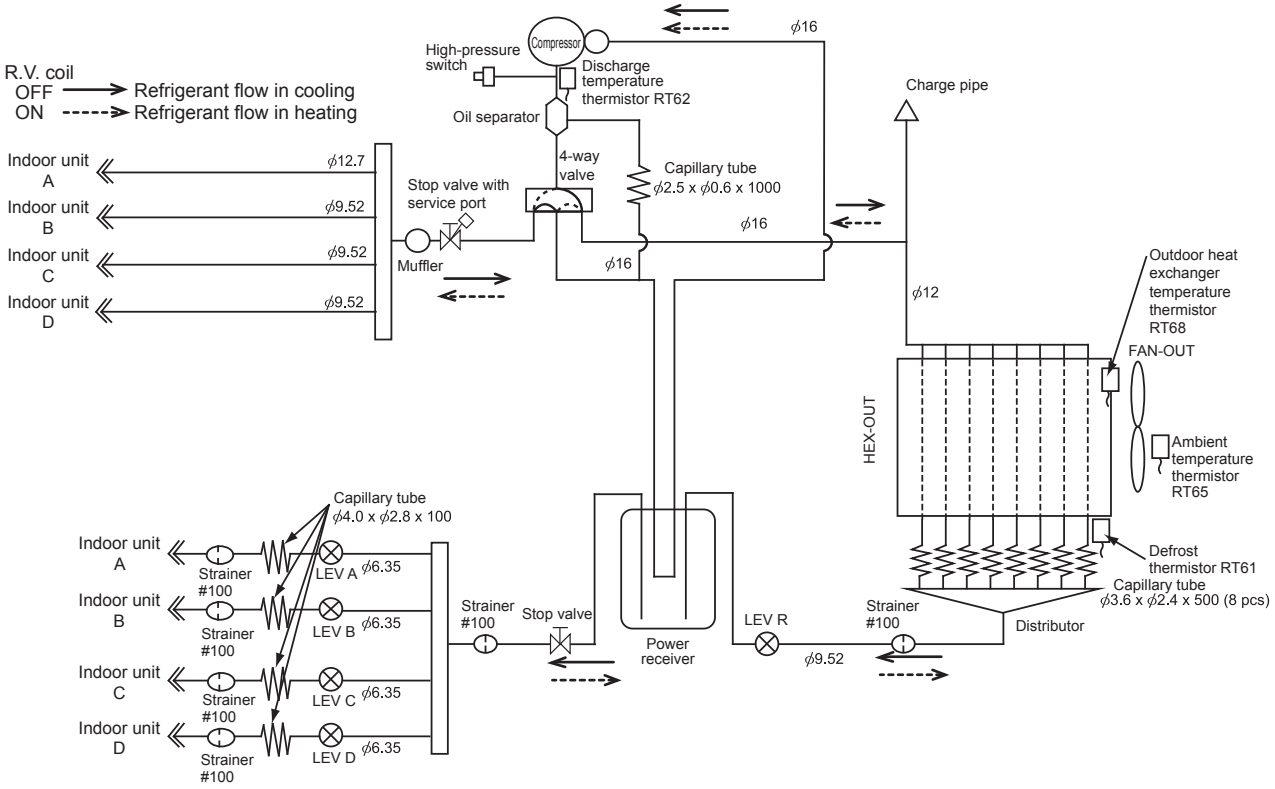
Unit: mm



MAX REFRIGERANT PIPING LENGTH

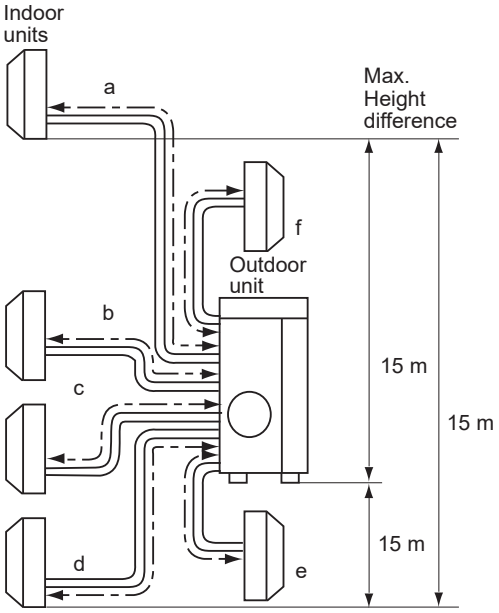
Piping length each indoor unit (a, b, c, d, e, f)	25 m
Total piping length (a+b+c+d+e+f)	80 m
Number of bends for each unit	25
Total number of bends	80

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

Outdoor unit precharged (g)	Refrigerant piping length (one way, 6 units total)
	80 m
2,400	0

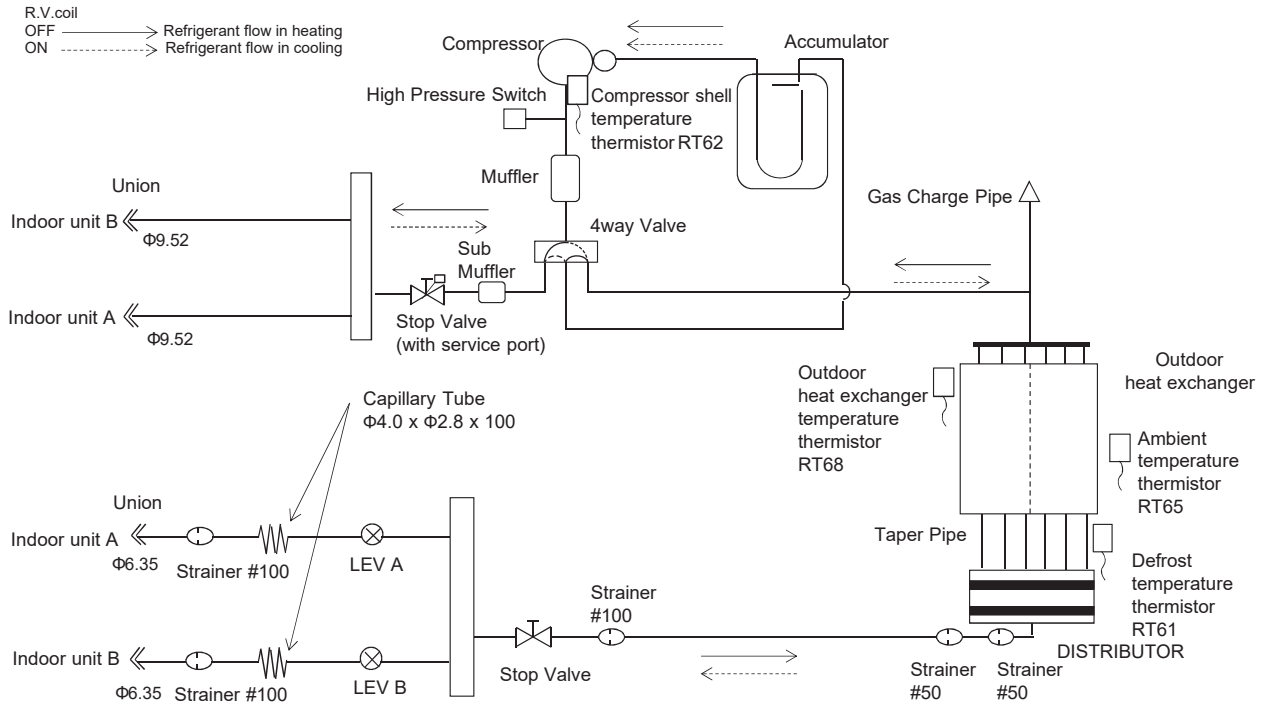
- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.
- When diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe. For further information on Different-diameter pipe, refer to "PARTS CATALOG".

Unit: mm (inch)

Outdoor unit union diameter			Outdoor unit union diameter		
For			For		
Indoor unit A	Liquid	6.35(1/4)	Indoor unit D	Liquid	6.35(1/4)
	Gas	12.7(1/2)		Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)	Indoor unit E	Liquid	6.35(1/4)
	Gas	9.52(3/8)		Gas	9.52(3/8)
Indoor unit C	Liquid	6.35(1/4)	Indoor unit F	Liquid	6.35(1/4)
	Gas	9.52(3/8)		Gas	9.52(3/8)

MXZ-2F53VFHZ MXZ-2F53VFHZ2

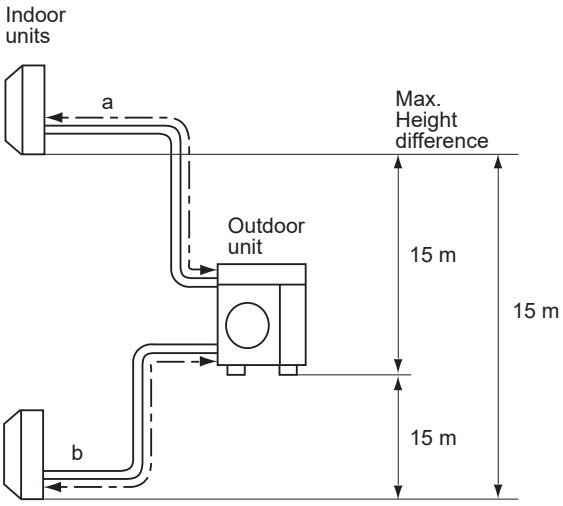
Unit: mm



MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b)	20 m
Total piping length (a+b)	30 m
Number of bends for each unit	20
Total number of bends	30

*It is irrelevant which unit is higher.



ADDITIONAL REFRIGERANT CHARGE

Outdoor unit precharged (g)	Refrigerant piping length (one way, 2 units total)
	30 m
2,400	0

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.
- When diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe. For further information on Different-diameter pipe, refer to "PARTS CATALOG".

Total refrigerant	=	Pre charge	+	Piping length
1.0 kg		1.0 kg		0.0 kg

■MXZ-2F33VF
■MXZ-2F33VF2

Total refrigerant	=	Pre charge	+	Piping length
1.0 kg		1.0 kg		0.0 kg

■MXZ-2F33VF3
■MXZ-2F33VF4

Total refrigerant	=	Pre charge	+	Piping length
0.8 kg		0.8 kg		0.0 kg

*1 If you connect indoor unit number 3 or 4 units, please add to charge refrigetrant amount **0.5kg**

*2 If you connect specific indoor unit(s), please add to charge refrigetrant amount **0.17kg per 1unit**

Specific indoor unit is following: MSZ-LN18/25/35VG MLZ-KP25/35/50VF
SEZ-M50DA(L) PCA-M50/60KA
PEAD-M50JA(L)

*3 In case total refrigerant amount exceed **2.4kg** depending on combination, please charge only **1.0kg** for maximum.

PUMPING DOWN

When relocating or disposing of the air conditioner, pump down the system following the procedure below so that no refrigerant is released into the atmosphere.

1) Turn off the breaker.
2) Connect the gauge manifold valve to the service port of the stop valve on the gas pipe side of the outdoor unit.
3) Fully close the stop valve on the liquid pipe side of the outdoor unit.
4) Turn on the breaker.
5) Start the emergency COOL operation on all the indoor units.
6) When the pressure gauge shows 0.05 to 0 MPa [Gauge] (approximately 0.5 to 0 kgf/cm²), fully close the stop valve on the gas pipe side of the outdoor unit and stop the operation. (Refer to the indoor unit installation manual about the method for stopping the operation.)
   * If too much refrigerant has been added to the air conditioner system, the pressure may not drop to 0.05 to 0 MPa [Gauge] (approximately 0.5 to 0 kgf/cm²), or the protection function may operate due to the pressure increase in the high pressure refrigerant circuit. If this occurs, use a refrigerant collecting device to collect all of the refrigerant in the system, and then recharge the system with the correct amount of refrigerant after the indoor and outdoor units have been relocated.
7) Turn off the breaker. Remove the pressure gauge and the refrigerant piping.

WARNING

When pumping down the refrigerant, stop the compressor before disconnecting the refrigerant pipes.
The compressor may burst and cause injury if any foreign substance, such as air, enters the pipes.

9 PERFORMANCE CURVES

The standard specifications apply only to the operation of the air conditioner under normal conditions.
Since operating conditions vary according to the areas where these units are installed, the following information has been provided to clarify the operating characteristics of the air conditioner under the conditions indicated by the performance curve.

(1) GUARANTEED VOLTAGE

198 - 264 V 50 Hz

(2) AIR FLOW

Air flow should be set at MAX.

(3) MAIN READINGS

(1) Indoor intake air wet-bulb temperature:	°CWB	Cooling
(2) Indoor outlet air wet-bulb temperature:	°CWB	
(3) Outdoor intake air dry-bulb temperature:	°CDB	
(4) Total input:	W	
(5) Indoor intake air dry-bulb temperature:	°CDB	Heating
(6) Outdoor intake air wet-bulb temperature:	°CWB	
(7) Total input:	W	

Indoor air wet and dry bulb temperature difference on the left side of the following chart shows the difference between the indoor intake air wet and dry bulb temperature and the indoor outlet air wet and dry bulb temperature for your reference at service.

How to measure the indoor air wet and dry bulb temperature difference

1. Attach at least 2 sets of wet and dry bulb thermometers to the indoor air intake as shown in the figure, and at least 2 sets of wet and dry bulb thermometers to the indoor air outlet. The thermometers must be attached to the position where air speed is high.
2. Attach at least 2 sets of wet and dry bulb thermometers to the outdoor air intake.
   Cover the thermometers to prevent direct rays of the sun.
3. Check that the air filter is cleaned.
4. Open windows and doors of room.
5. Press the emergency operation switch once (twice) to start the EMERGENCY COOL (HEAT) MODE.
6. When system stabilizes after more than 15 minutes, measure temperature and take an average temperature.
7. 10 minutes later, measure temperature again and check that the temperature does not change.

9-3. HOW TO OPERATE FIXED-FREQUENCY OPERATION <Test run operation>

1. Press the emergency operation switch to start COOL or HEAT mode (COOL : Press once, HEAT : Press twice).
2. Test run operation starts and continues to operate for 30 minutes.
3. Compressor operates at rated frequency.
4. Indoor fan operates at High speed.
5. After 30 minutes, test run operation finishes and EMERGENCY OPERATION starts (Operation frequency of compressor varies).
6. To cancel test run operation or EMERGENCY OPERATION, press the emergency operation switch or any button on remote controller.

9-4. OUTDOOR LOW PRESSURE AND OUTDOOR UNIT CURRENT CURVE (single operation)

NOTE: The unit of pressure has been changed to MPa on the international system of units (SI unit system).
The conversion factor is : **1 (MPa [Gauge]) = 10.2 (kgf/cm² [Gauge])**

(1) COOL operation

① Both indoor and outdoor units are under the same temperature/humidity condition.
② Operation : TEST RUN OPERATION (Refer to 9-3.)

Dry-bulb temperature (°C)	Relative humidity (%)
20	50
25	60
30	70

11-2. LOCKING THE OPERATION MODE OF THE AIR CONDITIONER (COOL, DRY, HEAT)

With this function, once the operation mode is locked to either COOL/DRY mode or HEAT mode, the air conditioner operates in that mode only.
Changing the setting is required to activate this function. Explain about this function to your customers and ask them whether they want to use it.

[How to lock the operation mode]
(1) Turn OFF the power supply and make sure that the LED goes off.
(2) Set SW1 as shown in the figure below.
(3) Turn ON the power supply.

<MXZ-2F33VF/2F42VF/2F53VF/2F53VFH

11-3. HOW TO SET LOW STANDBY POWER MODE

MXZ-3F54VF MXZ-3F68VF MXZ-4F72VF
MXZ-3F54VF2 MXZ-3F68VF2 MXZ-4F72VF2 MXZ-4F80VF2

•The factory setting of low standby power mode for above units is “Activated”.

In case that compressor is not in operation, and both LED1 (Red) and LED2 (Yellow) are not lit, check the setting of low standby power mode on the outdoor control P.C. board. And check the settings for dip switch (SW1) and jumper connector (SC751).
•Before turning on the breaker, settings for dip switch (SW1) and jumper connector (SC751) are necessary on the outdoor control P.C. board.
•When connecting one or more indoor units listed in Table 1, change the setting to deactivated low standby power mode.

NOTE:
•Units come with low standby power mode activated as factory setting.
•When connecting one or more indoor units listed in Table 1, the outdoor unit does not work at activated low standby power mode.
•In the event that SC751 is missing, outdoor unit will not work.

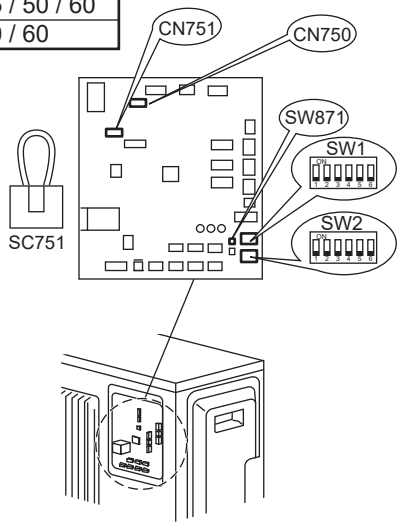
Table 1: List of the target models

Type	Model name	Capacity
Wall-mounted	MSZ-AP**VF	15 / 20
1way-cassette	MLZ-KP**VF	25 / 35 / 50
4way-cassette	SLZ-M**FA	15 / 25 / 35 / 50
Ceiling-Concealed	PEAD-M**JA(L)	50
	SEZ-M**DA(L)	25 / 35 / 50 / 60
Ceiling-Suspended	PCA-M**KA	50 / 60

To activate low standby power mode:
Connect SC751 to CN750.
Set “2” on SW1 to ON.

To deactivate low standby power mode:
Connect SC751 to CN751.
Set “2” on SW1 to OFF.

SC751	SW1	MODE
CN750		Activated
CN751		Deactivated



MXZ-3F54VF3 MXZ-3F68VF3 MXZ-4F72VF3 MXZ-4F80VF3
MXZ-3F54VF4 MXZ-3F68VF4 MXZ-4F72VF4 MXZ-4F80VF4
MXZ-4F83VF MXZ-5F102VF MXZ-6F120VF2
MXZ-4F83VF2 MXZ-5F102VF2 MXZ-6F122VF

•The factory setting of low standby power mode for above units is “Deactivated”.

In case that compressor is not in operation, and both LED1 (Red) and LED2 (Yellow) are not lit, check the setting of low standby power mode on the outdoor control P.C. board. And check the settings for dip switch (SW1) and jumper connector (SC751).

•Before turning on the breaker, settings for dip switch (SW1) and jumper connector (SC751) are necessary on the outdoor control P.C. board.

•It is recommended to activate the low standby power mode when none of the indoor units listed in Table 1 is connected.

NOTE:

•Units come with low standby power mode deactivated as factory setting.

•When connecting one or more indoor units listed in Table 1, the outdoor unit does not work at activated low standby power mode.

•In the event that SC751 is missing, outdoor unit will not work.

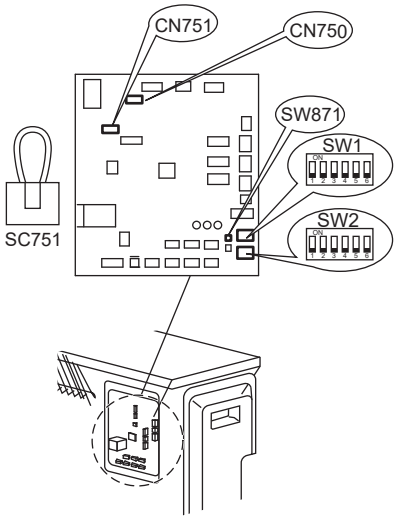
Table 1: List of the target models

Type	Model name
Wall-mounted	MSZ-AP**VF
1way-cassette	MLZ-KP**VF
4way-cassette	SLZ-M**FA
Ceiling-Concealed	PEAD-M**JA(L)
	SEZ-M**DA(L)
Ceiling-Suspended	PCA-M**KA
Floor-Standing	SFZ-M**VA

To activate low standby power mode:
Connect SC751 to CN750.
Set “2” on SW1 to ON.

To deactivate low standby power mode:
Connect SC751 to CN751.
Set “2” on SW1 to OFF.

SC751	SW1	MODE
CN750		Activated
CN751		Deactivated



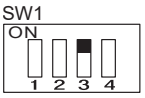
11-4. LOWERING THE OPERATING NOISE OF THE OUTDOOR UNIT

With this function, the operating noise of the outdoor unit can be lowered by reducing the operation load, for example, during nighttime in COOL mode.
However, note that the cooling and heating capacity may lower if this function is activated.
Changing the setting is required to activate this function. Explain about this function to your customers and ask them whether they want to use it.

<MXZ-2F33VF/2F42VF/2F53VF/2F53VFH
MXZ-2F33VF2/2F42VF2/2F53VF2/2F53VFH2
MXZ-2F33VF3/2F42VF3/2F53VF3/2F53VFH3
MXZ-2F33VF4/2F42VF4/2F53VF4/2F53VFH4>

[How to lower the operating noise]
(1) Turn OFF the power supply and make sure that the LED goes off.
(2) Set "3" on SW1 to ON to enable this function.
(3) Turn ON the power supply.

SW1 on the outdoor display P.C. board



<MXZ-3F54VF/3F68VF/4F72VF
MXZ-3F54VF2/3F68VF2/4F72VF2/4F80VF2

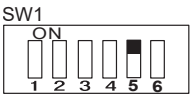
MXZ-4F83/5F102/6F120VF2/MXZ-2F53/4F83VFHZ2>

[How to lower the operating noise]
(1) Turn OFF the power supply and make sure that the LED goes off.
(2) Set "5" on SW1 to ON the enable this function.
(3) Turn ON the power supply.

SW1 on the outdoor control P.C. board



11-5. CHANGING THE AMPERE LIMIT

<MXZ-2F53VFHZ/MXZ-2F53VFHZ2/4F83VFHZ/4F83VFHZ2/MXZ-6F120VF2/MXZ-6F122VF>
With this function, the amount of current that flows in the outdoor unit can be changed.

NOTE: Use this function only when the amount of current exceeds the allowed value.

[How to change the ampere limit]
(1) Be sure to turn off the power supply for the air conditioner before making the setting.
(2) Make the setting referring to the table below.
(3) Turn ON the power supply.

SW2 on the outdoor control P.C. board

SW2	**MXZ-2F53VFHZ MXZ-2F53VFHZ2**	**MXZ-4F83VFHZ MXZ-4F83VFHZ2**	**MXZ-6F120VF2 MXZ-6F122VF**
	13.6 A (Factory setting)	21 A	20 A
	18.4 A	Full (Factory setting)	Full (Factory setting)

11-6. AUTOMATIC LINE CORRECTING

<MXZ-2F33VF/2F42VF/2F53VF/2F53VFH, MXZ-2F33VF2/2F42VF2/2F53VF2/2F53VFH2, MXZ-2F33VF3/2F42VF3/2F53VF3/2F53VFH3, MXZ-2F33VF4/2F42VF4/2F53VF4/2F53VFH4>

This outdoor unit has an automatic line correcting function which automatically detects and corrects improper wiring or piping.

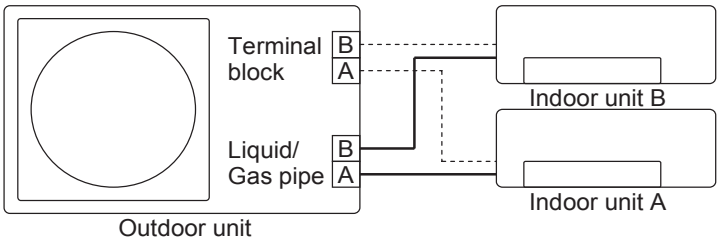
<MXZ-2F33VF/2F42VF/2F53VF/2F53VFH, MXZ-2F33VF2/2F42VF2/2F53VF2/2F53VFH2, MXZ-2F33VF3/2F42VF3/2F53VF3/2F53VFH3, MXZ-2F33VF4/2F42VF4/2F53VF4/2F53VFH4>

Improper wiring or piping can be automatically detected when one indoor unit is operated in COOL mode for 30 minutes. When improper wiring or piping is detected, wiring lines are corrected (A to B/ B to A) with the software.

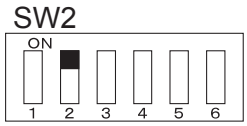
NOTE: This function may not work due to the condition or environment of the unit, such as the following:
- gas leak, closed stop valve
- unit failure such as defective LEV
- indoor/outdoor temperature

NOTE: This function does not work when "2" on SW2 on the outdoor display P.C. board is turned OFF.

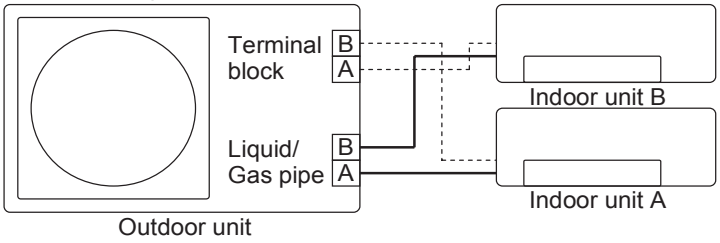
<Correct>

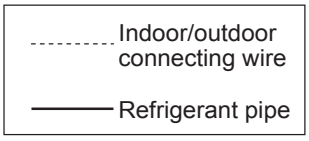


MXZ-2F33VF/2F42VF/2F53VF/2F53VFH
MXZ-2F33VF2/2F42VF2/2F53VF2/2F53VFH2
MXZ-2F33VF3/2F42VF3/2F53VF3/2F53VFH3
MXZ-2F33VF4/2F42VF4/2F53VF4/2F53VFH4
SW2 on the outdoor display P.C. board

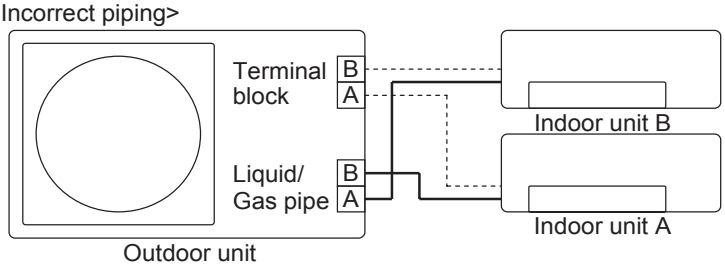


<Incorrect wiring>





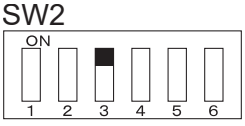
<Incorrect piping>



The record of automatic line correcting can be checked in the following way:
(1) Turn OFF the power supply and make sure that the LED goes off.
(2) Turn ON "3" on SW2 on the outdoor display P.C. board.
(3) Turn ON the power supply.
(4) Check the correction state with the LED lamps on the outdoor display P.C. board.
(5) Turn OFF the power supply and make sure that the LED goes off.
(6) Turn OFF "3" on SW2 on the outdoor display P.C. board.
(7) Turn ON the power supply.

Number of blinks		Wiring line
LED1 (Red)	LED2 (Yellow)	
Once	Once	Not corrected
3 times	3 times	Corrected

MXZ-2F33VF/2F42VF/2F53VF/2F53VFH
MXZ-2F33VF2/2F42VF2/2F53VF2/2F53VFH2
MXZ-2F33VF3/2F42VF3/2F53VF3/2F53VFH3
MXZ-2F33VF4/2F42VF4/2F53VF4/2F53VFH4
SW2 on the outdoor display P.C. board



<MXZ-3F54VF/3F68VF/4F72VF, MXZ-3F54VF2/3F68VF2/4F72VF2/4F80VF2,
MXZ-3F54VF3/3F68VF3/4F72VF3/4F80VF3,MXZ-4F83/5F102/6F122VF, MXZ-2F53/4F83VFHZ
MXZ-3F54VF4/3F68VF4/4F72VF4/4F80VF4,MXZ-4F83/5F102/6F120VF2, MXZ-2F53/4F83VFHZ2>

Outdoor unit has an auto line correcting function which automatically detects and corrects improper wiring or piping.

Improper wiring or piping can be automatically detected by pressing the piping/wiring correction switch (SW871).
When improper wiring or piping is detected, wiring lines are corrected.
This will be completed in about 10 to 15 minutes.

[How to activate this function]

1. Check that outside temperature is above 0˚C.
   (This function does not work when the outside temperature is 0˚C or below.)
2. Check that the stop valves of the liquid pipe and gas pipe are open.
3. Check that the wiring between indoor and outdoor unit is correct.
   (If the wiring is not correct, this function does not work.)
4. Turn ON the power supply and wait at least 1 minute.
5. Press the piping/wiring correction switch (SW871) on the outdoor control P.C. board.
   Do not touch energized parts.

   LED indication during detection:

LED1 (Red)	LED2 (Yellow)	LED3 (Green)
Lit	Lit	Once

   LED indication after detection:

LED1 (Red)	LED2 (Yellow)	LED3 (Green)	Result
Lit	Not lit	Lit	Completed (Problem corrected/ normal)
Once	Once	Once	Not completed (Detection failed)
Other indications			Refer to "SAFETY PRECAUTIONS WHEN LED BLINKS" located behind the top panel.

   *Make sure that the valves are open and the pipes are not collapsed or clogged.
6. Press the switch to cancel.

   LED indication after cancel :

LED1 (Red)	LED2 (Yellow)	LED3 (Green)
Lit	Lit	Not lit

NOTE: Indoor unit cannot be operated while this function is activated.
When this function is activated while indoor unit is operating, the operation will be stopped.
Operate indoor unit after the auto line correcting is finished.
Pressing the switch during detection cancels this function.

The record of auto line correcting can be confirmed in the following way:

Press the switch for more than 5 seconds.
LED will show the record of auto correcting for about 30 seconds as shown in the table below:

Number of blinks			Wiring line
LED1 (Red)	LED2 (Yellow)	LED3 (Green)	
Once	Once	Lit	Not corrected
3 times	3 times	Lit	Corrected

NOTE: Activate this function to confirm the correct wiring after replacing the outdoor control P.C. board.
(Previous records are deleted when the outdoor control P.C. board is replaced.)
The record cannot be shown if auto line correcting is not canceled (Refer to "How to activate this function").

11-7. CHANGING THE SET REFRIGERANT EVAPORATING TEMPERATURE

NOTE: If you lower the refrigerant evaporating temperature with the windows open, it may cause dew drop.

[How to change the refrigerant evaporating temperature]
(1) Make sure there is no possibility of causing dew drop before making the setting.
(2) Make the setting referring to the table below.

SW2 on the outdoor control P.C. board

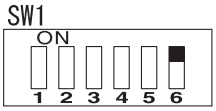
SW2	**MXZ-3F54VF** **MXZ-3F68VF** **MXZ-4F72VF**	**MXZ-3F54VF2/VF3/VF4** **MXZ-3F68VF2/VF3/VF4** **MXZ-4F72VF2/VF3/VF4** **MXZ-4F80VF2/VF3/VF4**	**MXZ-4F83VF/VF2** **MXZ-5F102VF/VF2** **MXZ-6F120VF2** **MXZ-6F122VF** **MXZ-2F53VFHZ/VFHZ2** **MXZ-4F83VFHZ/VFHZ2**
	7 °C or 9 °C	6 °C	
	Normal control		

MXZ-3F54/3F68/4F72/4F80VF4

11-8. SETTING WHEN THE PIPING LENGTH IS LONG

For a system that connects all rooms and has a total piping length of 40 m or more, change the setting to improve the circulation of the refrigerant.

[How to perform the setting]
(1) Be sure to turn off the main power of the air conditioner before performing the setting.
(2) To enable this function, set SW1 “6” on the outdoor controller board to ON.
(3) Turn on the main power of the air conditioner.



When the piping length is long

11-9. SETTING WHEN USING PIPING WITH A LARGER DIAMETER THAN THE STANDARD SPEC

When using existing piping, the piping may be thicker than the standard diameter due to the replace from R22 refrigerant. In that case, you will need to change the settings to improve the circulation of the refrigerant and oil.

If standard pipe sizes are used, this setting should not be changed.
Please note that this function only applies to models produced after the following serial numbers:
4YP00001 –

[Setting method]
(1) Be sure to turn off the main power of the air conditioner before performing the setting.
(2) To enable this function, set SW2 “6” on the outdoor controller board to ON.
(3) Turn on the main power of the air conditioner.

SW2

12-1. CAUTIONS ON TROUBLESHOOTING

1. Before troubleshooting, check the following:

1) Check the power supply voltage.
2) Check the indoor/outdoor connecting wire for miswiring.

2. Take care of the following during servicing

1) Before servicing the air conditioner, be sure to turn OFF the unit first with the remote controller, and after confirming the horizontal vane is closed, turn OFF the breaker and/or disconnect the power plug.
2) Be sure to turn OFF the power supply before removing the front panel, the cabinet, the top panel, and the P.C. board.
3) When removing the electrical parts, be careful of the residual voltage of smoothing capacitor.
4) When removing the P.C. board, hold the edge of the board with care NOT to apply stress on the components.
5) When connecting or disconnecting the connectors, hold the connector housing. DO NOT pull the lead wires.

<Incorrect> <Correct>

Lead wiring **Connector housing**

3. Troubleshooting procedure

1) Check if the OPERATION INDICATOR lamp on the indoor unit is blinking on and off to indicate an abnormality. To make sure, check how many times the OPERATION INDICATOR lamp is blinking on and off before starting service work.
2) Before servicing, verify that all connectors and terminals are connected properly.
3) When the electronic control P.C. board seems to be defective, check for disconnection of the copper foil pattern and burnt or discolored components.
4) Refer to 12-2, 12-3 and 12-4.

12-2. FAILURE MODE RECALL FUNCTION

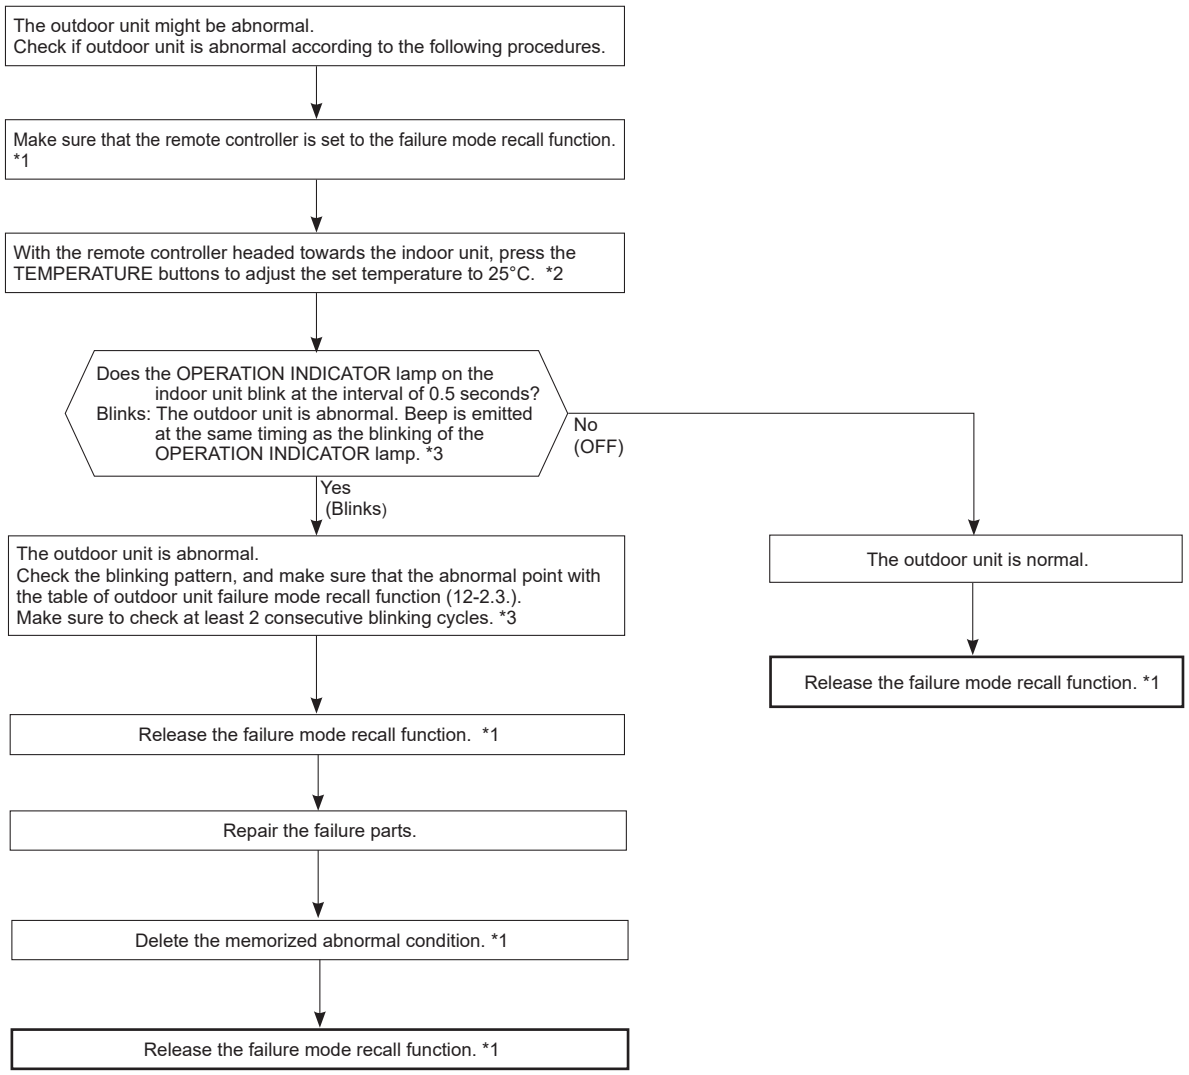
This air conditioner can memorize the abnormal condition which has occurred once.
Even though LED indication listed on the troubleshooting check table (12-4.) disappears, the memorized failure details can be recalled.

1. Flow chart of failure mode recall function for the indoor/outdoor unit

Refer to the service manual of indoor unit.

2. Flow chart of the detailed outdoor unit failure mode recall function

Operational procedure

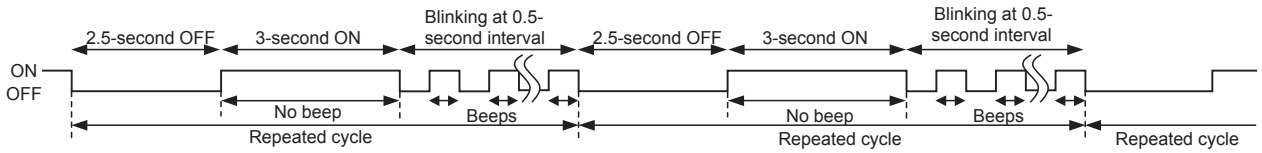


NOTE: 1. Make sure to release the failure mode recall function after it is set up, otherwise the unit cannot operate properly.
2. If the abnormal condition is not deleted from the memory, the last abnormal condition is kept memorized.

*1. Refer to the service manual of indoor unit.

*2. Regardless of normal or abnormal condition, 2 short beeps are emitted as the signal is received.

*3. Blinking pattern when outdoor unit is abnormal:



3. Table of outdoor unit failure mode recall function

NOTE: Blinking patterns of this mode differ from the ones of Troubleshooting check table (12-4).

30		Lit	12 times	Zero cross detecting circuit (Outdoor power P.C. board)	Zero cross signal cannot be detected while the compressor is operating.	• Replace the outdoor power P.C. board.
31	Outdoor unit operates.	Once	Lit	Primary current protection	The input current exceeds 13.6 A (**MXZ-2F53VFHZ/ VFHZ2**)/ 15 A (**MXZ-3F54/3F68/4F72VF/VF2/ VF4/4F80VF2/VF3/VF4**)/18.4 A (**MXZ-4F83/5F102VF/VF2**)/26.8A **MXZ-6F120VF2,MXZ-6F122VF)**/25 A (**MXZ-4F83VFHZ/VFHZ2**).	These symptoms do not mean any abnormality of the product, but check the following points. • Check if indoor filters are clogged. • Check if refrigerant is short. • Check if indoor/outdoor unit air circulation is short cycled.
32		Twice	Lit	High pressure protection	The indoor gas pipe temperature exceeds 45°C during heating.	
				Defrosting in cooling	The indoor gas pipe temperature falls 3°C or below during cooling.	
33		3 times	Lit	Discharge temperature protection	The frequency of the compressor is kept 80 Hz or more and the discharge temperature is kept under 50°C(COOL mode)/40°C(HEAT mode) for more than 40 minutes.	• Check refrigerant circuit and refrigerant amount. • Refer to 12-6. Ⓓ "Check of LEV". • Refer to 12-6. Ⓕ "Check of outdoor thermistors".
34		4 times	Lit	Low discharge temperature protection	The frequency of the compressor is kept 80 Hz or more and the discharge temperature is kept under 39°C for more than 20 minutes.	• Refer to 12-6. Ⓓ "Check of LEV". • Check refrigerant circuit and refrigerant amount.
35		5 times	Lit	Cooling high pressure protection	The outdoor heat exchanger temperature exceeds 58°C during operation.	This symptom does not mean any abnormality of the product, but check the following points. • Check if indoor filters are clogged. • Check if refrigerant is short. • Check if indoor/outdoor unit air circulation is short cycled.
36		7 times	Lit	High → Low pressure bypass valve Cooling evaporating temperature drop prevention control	**MXZ-3F54/3F68/4F72VF/VF2/VF3/4F80VF2/VF3/ VF4** During cooling operation, the temperature of indoor heat exchanger becomes 3°C or less within 1 hour after the compressor starts running, or it becomes less than 12°C - 16°C* later than that. * It depends on the difference between the set temperature and the room temperature.	This symptom does not mean any abnormality of the product, but check the following points. • Check the indoor filters are not clogged. • Check there is sufficient refrigerant. • Check the indoor/outdoor unit air circulation is not short cycled.
				High → Low pressure bypass valve High pressure protection control at startup of heating operation	**MXZ-6F120VF2, MXZ-6F122VF, MXZ-4F83VFHZ/ VFHZ2** The room temperature is 24°C or more when 1 or 2 unit(s) start(s) the heating operation.	
				High → Low pressure bypass valve Compressor oil tempering control at startup of heating operation	**MXZ-6F120VF2, MXZ-6F122VF, MXZ-4F83VFHZ /VFHZ2** Both the following are true: • The outside temperature is -2°C or less when the heating operation is started. • [(Discharge temperature) - (Indoor heat exchanger temperature)] < 5°C	

No.	Symptom	Indication		Abnormal point / Condition	Condition	Remedy
		LED1(Red)	LED2(Yellow)			
37	Outdoor unit operates.	11 times	Lit	M-NET communication error	M-NET adapter P.C. board detects an abnormality in the communication error.	• Check the connecting wire between M-NET adapter P.C. board and outdoor control P.C. board, or terminal block.
38	Outdoor unit operates normally.	8 times	Lit	Cooling evaporating temperature protection	During cooling operation, the temperature of indoor heat exchanger becomes 7°C - 11°C* or less within 1 hour after the compressor starts running, or it becomes 9°C - 17°C* or less later than that. * It depends on the indoor unit type/model or the difference between the set temperature and the room temperature.	This symptom does not mean any abnormality of the product.
39		9 times	Lit	Inverter check mode	The unit is operated with the emergency operation switch.	—
40		Lit	Lit	Normal	—	—

NOTE 1. The location of LED is illustrated at the right figure. Refer to 12-7.2.
2. LED is lit during normal operation.

The blinking frequency shows the number of times the LED blinks after every 2.5-second OFF.
(Example) When the blinking frequency is “2”.

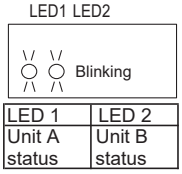
LED indication for communication status

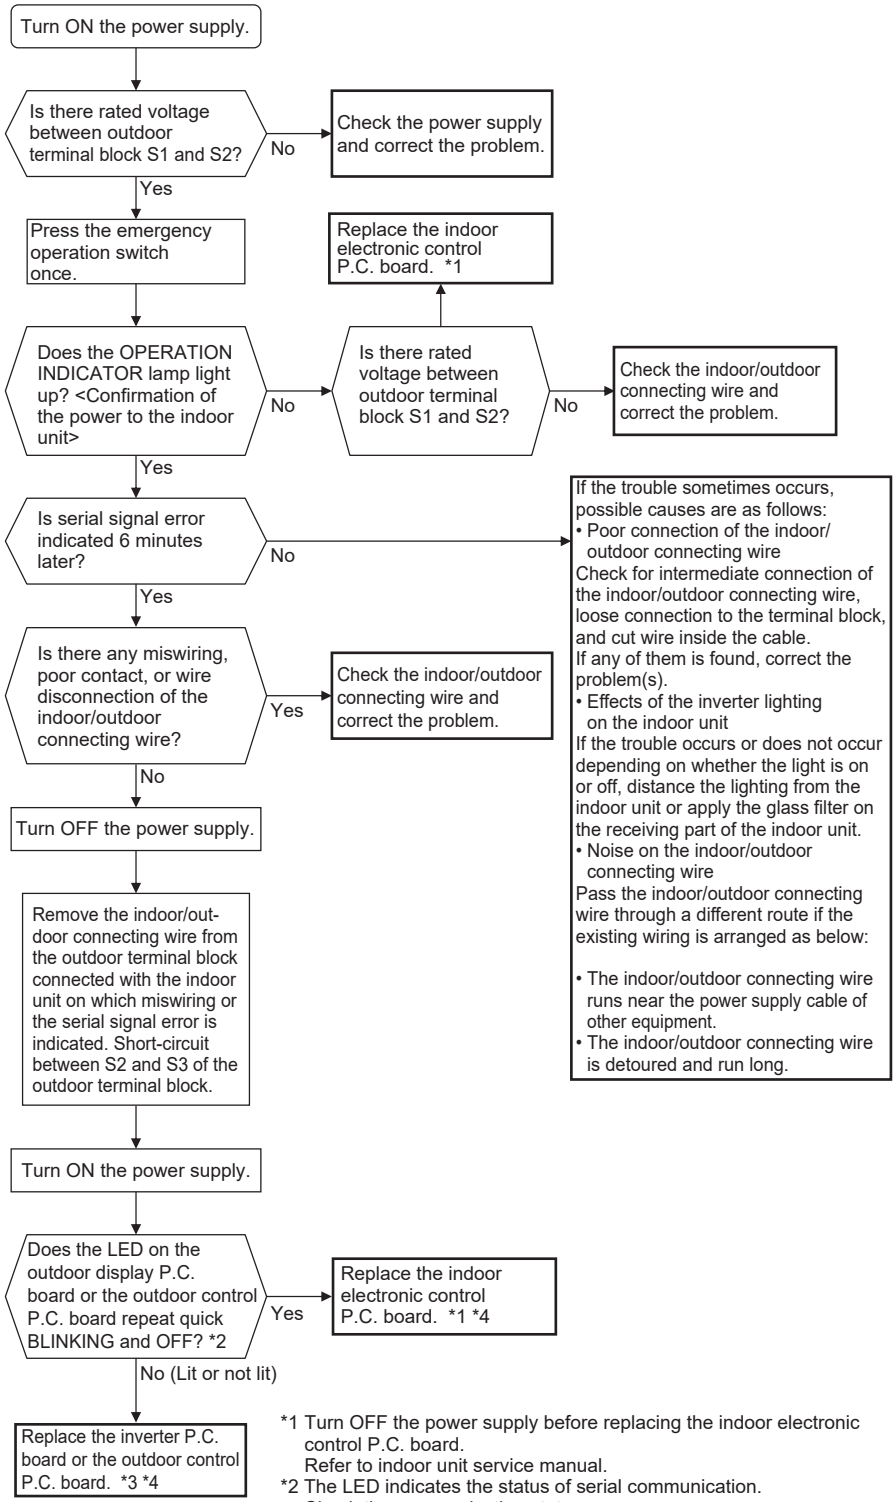
Communication status is indicated by the LED.

Unit status
Blinking: normal communication
Lighted: abnormal communication or not connected
Not lighted: The outdoor P.C. board is abnormal.
NOTE: "Lighted" and "Not lighted" in the table below does not indicate abnormal.

Outdoor display P.C. board



LED 1	LED 2
Unit A status	Unit B status



*1 Turn OFF the power supply before replacing the indoor electronic control P.C. board.
Refer to indoor unit service manual.
*2 The LED indicates the status of serial communication.
Check the communication status.
*3 Turn OFF the power supply before replacing the inverter P.C. board.
Be careful of residual voltage of smoothing capacitor.
*4 Remove the short-circuit between outdoor terminal block S2 and S3. Connect the indoor/outdoor connecting wire.

MXZ-2F53/4F83VFHZ2

LED indication for communication status

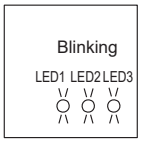
Communication status is indicated by the LED.

Unit status
Blinking: normal communication
Lighting: abnormal communication or not connected

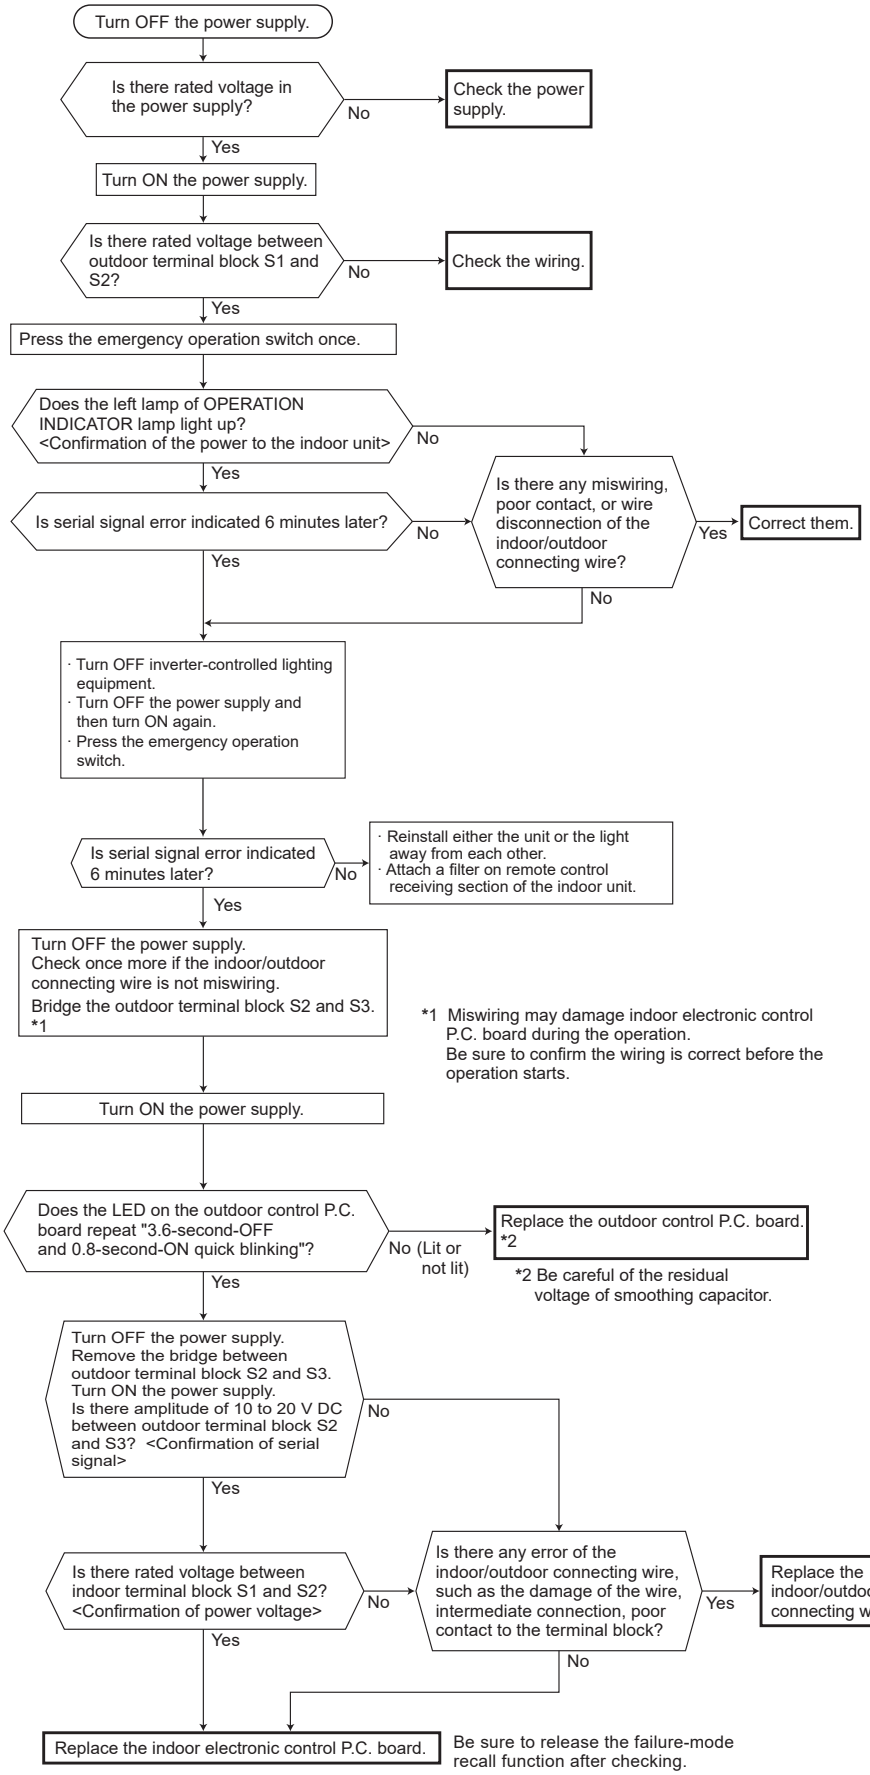
Pattern 1 and 2 is repeatedly displayed alternately. Each pattern is displayed for 10 seconds.

NOTE: "Lighting" in the table below does not indicate abnormal communication.

Outdoor control P.C. board



Pattern	LED 1	LED 2	LED 3
1	Unit A status	Unit B status	Lit
2	Unit C status	Unit D status	Not lit



*1 Miswiring may damage indoor electronic control P.C. board during the operation.
Be sure to confirm the wiring is correct before the operation starts.

*2 Be careful of the residual voltage of smoothing capacitor.

The cooling operation or heating operation does not operate.

MXZ-2F53/4F83VFHZ
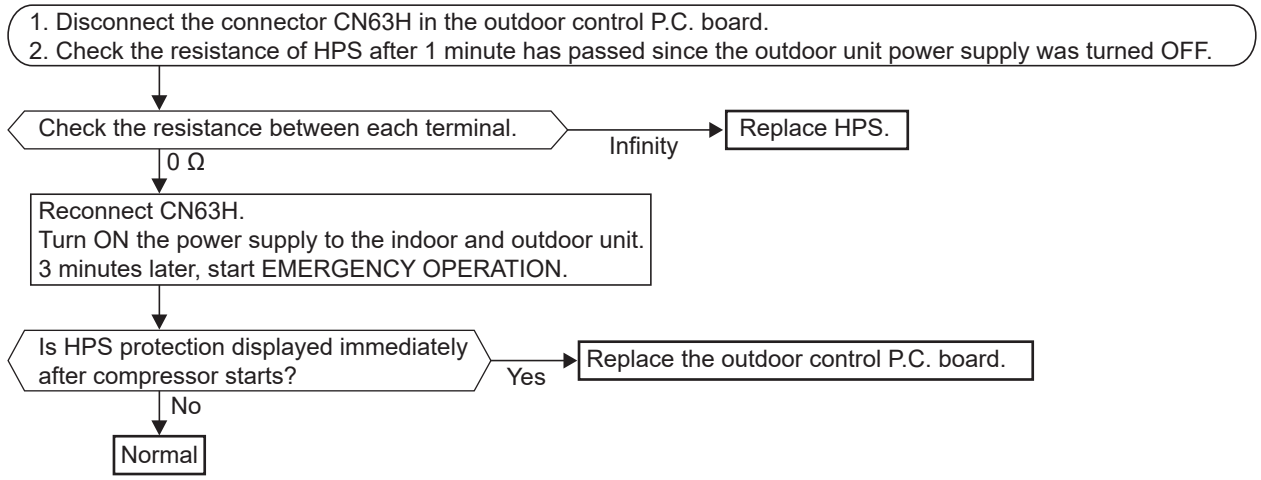
MXZ-4F83/5F102VF2
MXZ-2F53/4F83VFHZ2



Ⓘ The other cases

Indoor unit does not operate. (different operating models in multi system)

- When you try to run 2 indoor units simultaneously, one for cooling and the other for heating, the unit which transmits signal to the outdoor unit first decides the operation mode.
- When the above situation occurs, set all the indoor units to the same mode, turn OFF the indoor units, and then turn them back ON.
- Though the top of the indoor unit sometimes gets warm, this does not mean malfunction. The reason is that the refrigerant gas continuously flows into the indoor unit even while it is not operating.

Ⓙ Check of bus-bar voltage

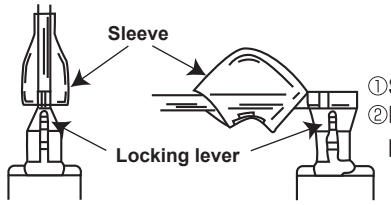
13 DISASSEMBLY INSTRUCTIONS

<Detaching method of the terminal with locking mechanism>

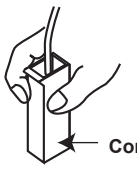
The terminal which has the locking mechanism can be detached as shown below.
There are 2 types of the terminal with locking mechanism.
The terminal without locking mechanism can be detached by pulling it out.
Check the shape of the terminal before detaching.

(1) Slide the sleeve and check if there is a locking lever or not.



①Slide the sleeve.
②Pull the terminal while pushing the locking lever.

(2) The terminal with this connector shown below has the locking mechanism.



①Hold the sleeve, and pull out the terminal slowly.

13-1. MXZ-2F33VF MXZ-2F42VF MXZ-2F53VF MXZ-2F53VFH
MXZ-2F33VF2 MXZ-2F42VF2 MXZ-2F53VF2 MXZ-2F53VFH2
MXZ-2F33VF3 MXZ-2F42VF3 MXZ-2F53VF3 MXZ-2F53VFH3
MXZ-2F33VF4 MXZ-2F42VF4 MXZ-2F53VF4 MXZ-2F53VFH4

⟶: Indicates the visible parts in the photos/figures.
⇢: Indicates the invisible parts in the photos/figures.

NOTE: Turn OFF the power supply before disassembly.

OPERATING PROCEDURE	PHOTOS/FIGURES
1. Removing the cabinet and the panels (1) Remove the screws fixing the service panel. (2) Pull down the service panel and remove it. (3) Disconnect the power supply and indoor/outdoor connecting wire. (4) Remove the screws fixing the top panel. (5) Remove the top panel. (6) Remove the screws fixing the cabinet. (7) Remove the cabinet. (8) Remove the screws fixing the back panel. (9) Remove the back panel.	**Photo 1** Photo 2  	**Photo 3** 
OPERATING PROCEDURE

2. Removing the inverter assembly and the inverter P.C. board

(1) Remove the service panel, the top panel and the cabinet (Refer to section 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire and remove the back panel (Refer to section 1).
(3) Disconnect all connectors and lead wires on the inverter P.C. board.
(4) Remove the compressor connector (CNMC).
(5) Remove the screws fixing the heat sink support and the separator.
(6) Remove the screws of the terminal block support and the back panel. (Photo 2)
(7) Remove the inverter assembly.
(8) Remove the screw of the earth wire and screws of the terminal block support.
(9) Remove the hooks of the heat sink support and remove the heat sink support from the P.C. board support.
(10) Remove the screw fixing the inverter P.C. board and remove the inverter P.C. board from the P.C. board support.

3. Removing the R.V. coil

(1) Remove the service panel, the top panel and the cabinet (Refer to section 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire and remove the back panel (Refer to section 1).
(3) Remove the inverter assembly (Refer to section 2).
(4) Remove the R.V. coil.

4. Removing the discharge temperature thermistor, defrost thermistor and outdoor heat exchanger temperature thermistor

(1) Remove the service panel, the top panel and the cabinet (Refer to section 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire and remove the back panel (Refer to section 1).
(3) Remove the inverter assembly (Refer to section 2).
(4) Remove the terminal cover, and remove the thermal protector (TRS).
(5) Pull out the discharge temperature thermistor from its holder.
(6) Pull out the defrost thermistor from its holder (Photo 7).
(7) Pull out the outdoor heat exchanger temperature thermistor from its holder (Photo 7).

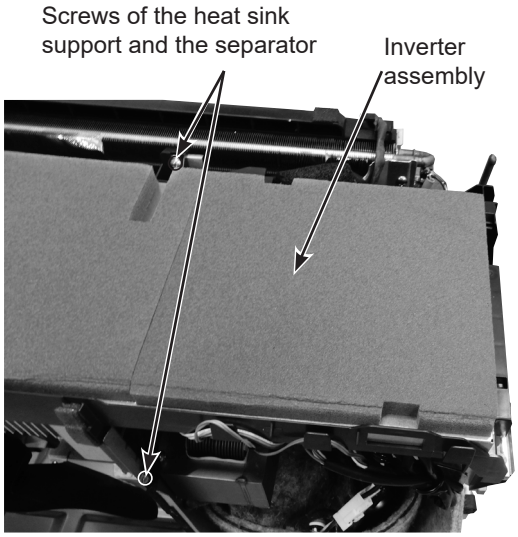

Photo 5

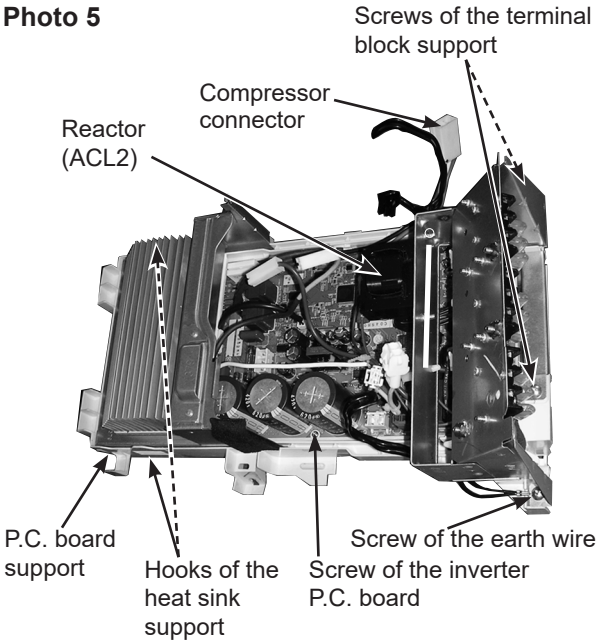

Photo 6

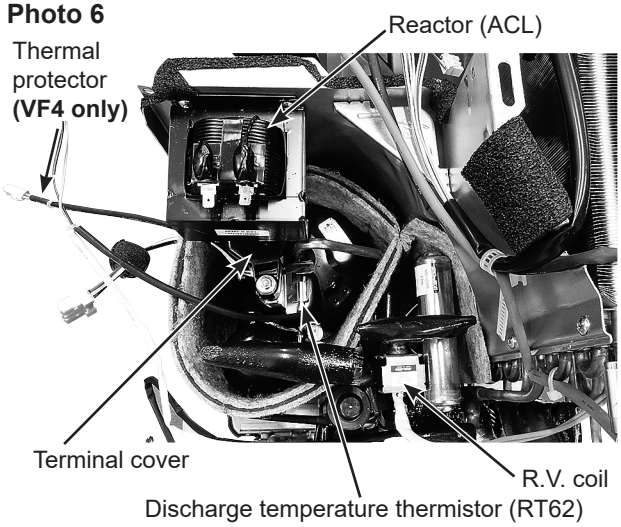

OPERATING PROCEDURE

5. Removing the outdoor fan motor

(1) Remove the service panel, the top panel and the cabinet (Refer to section 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire.
(3) Disconnect the connectors for outdoor fan motor.
(4) Remove the propeller fan nut.
(5) Remove the propeller fan.
(6) Remove the screws fixing the fan motor.
(7) Remove the fan motor.

6. Removing the compressor and the 4-way valve

(1) Remove the service panel, the top panel and the cabinet (Refer to section 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire and remove the back panel (Refer to section 1).
(3) Remove the inverter assembly (Refer to section 2).
(4) Remove the terminal cover, and remove the thermal protector (TRS).
(5) Pull out the discharge temperature thermistor from its holder.
(6) Recover gas from the refrigerant circuit.

NOTE: Recover gas from the pipes until the pressure gauge shows 0 kg/cm^2 (0 MPa).

(7) Detach the brazed part of the suction and the discharge pipe connected with compressor.
(8) Remove the nuts of compressor legs.
(9) Remove the compressor.
(10) Detach the brazed part of pipes connected with 4-way valve.

MXZ-3F54VF4 MXZ-3F68VF4 MXZ-4F72VF4 MXZ-4F80VF4

NOTE: Turn OFF the power supply before disassembly.

OPERATING PROCEDURE	PHOTOS/FIGURES
1. Removing the cabinet and the panels (1) Remove the screws of the service panel, and remove the service panel. (2) Disconnect the power supply and indoor/outdoor connecting wire. (3) Remove the screws of the top panel, and remove the top panel. (4) Remove the screws of the cabinet, and remove the cabinet. (5) Remove the screws of the back panel, and remove the back panel (Photo 3).	**Photo 1** Photo 3  	**Photo 2** 
OPERATING PROCEDURE

2. Removing the outdoor control P.C. board, the outdoor power P.C. board and the reactor

(1) Remove the service panel (Photo 1).
(2) Disconnect the power supply and indoor/outdoor connecting wire.
(3) Remove the top panel, the cabinet, and the back panel (Photo 1, 2, 3).
(4) Disconnect all connectors and lead wires on the outdoor control P.C. board.
(5) Unhook the catches of the outdoor control P.C. board, and remove the outdoor control P.C. board.
(6) Remove the screws of the electrical box assembly, unhook the catches of the electrical box assembly, and remove the electrical box assembly.
(7) Remove the screws of outdoor control P.C. board holder, and remove the outdoor control P.C. board holder.
(8) Remove the screws of the reactor, and remove the reactor.
(9) Remove the screws of the reactor bed, and remove the reactor bed.
(10) Remove the screws of the heat sink support, and remove the heat sink support.
(11) Remove the screws fixing the outdoor power P.C. board.
(12) Disconnect all connectors and lead wires on the outdoor power P.C. board.

(4) Remove the screws fixing the outdoor control P.C. board, and remove the outdoor control P.C. board.
(5) Remove the screws fixing the electrical parts, and remove the electrical parts.
(6) Remove the screws fixing the TB support, and remove the TB support.
(7) Remove the screws fixing the control box separator, and remove the control box separator.
(8) Disconnect the lead wire of the outdoor power P.C. board.
(9) Remove the screws fixing the outdoor power P.C. board, and remove the outdoor power P.C. board with the outdoor P.C. board holder.
(10) Remove the screws fixing the control box F, and remove the control box F.
(11) Remove the screws fixing the reactors, and remove the reactors.

OPERATING PROCEDURE	PHOTOS/FIGURES
3. Removing the fan motor (1) Remove the service panel, the top panel and the front panel (Refer to section 1). (2) Disconnect the power supply cord and indoor/outdoor connecting wire. (3) Disconnect the connector CNF1 on the outdoor control P.C. board. (4) Remove the propeller fan. (5) Remove the fan motor.	**Photo 9** 4. Removing the compressor and 4-way valve (1) Remove the service panel, the top panel, the back panel and the front panel (Refer to section 1). (2) Disconnect the power supply cord and indoor/outdoor connecting wire, and remove the back panel. (3) Recover gas from the refrigerant circuit. **NOTE:** Recover gas from the pipes until the pressure gauge shows 0 kg/cm^2 (0 MPa). (4) Remove the terminal cover, the thermal protector (TRS) and the discharge temperature thermistor. (Photo 11) (5) Disconnect the compressor lead wire from the terminal of the compressor (U, V, W). (6) Disconnect the outdoor control P.C. board connectors: CNF1, CNTH1, CNTH2, CN63H, CN712, CN713, CN714, CN791, CN792, CN793, CN794, CN795 (7) Remove the screws fixing the electrical parts, and remove the electrical parts (Photo 4). (8) Remove the propeller fan. (9) Remove the screws fixing the VB fixture, and remove the VB fixture. (10) Remove the screws fixing the separator, and remove the separator. **NOTE:** When installing the separator, insert the tabs of the heat exchanger into the separator. (11) Remove the sound proof felt. (12) Detach the brazed parts of the suction and discharge pipes (Photo 11). (13) Remove the nuts of the compressor, and remove the compressor (Photo 11). (14) Detach the brazed parts of 4-way valve and pipes.	**Photo 10** 
OPERATING PROCEDURE	PHOTOS/FIGURES
5. Removing the expansion valve (1) Remove the service panel and the top panel (Refer to section 1). (2) Disconnect the power supply cord and indoor/outdoor connecting wire. (Gas recovery is not required if the unit is pumped down.) (3) Remove the LEV coils. (4) Detach the brazed parts of expansion valves and pipes.	**Photo 11**
